UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Lands

Objective Number

L-1

Objective 1.0:

Eliminate management problems created by Federal ownership of lands needed for local urban-suburban growth. While emphasizing the Las Vegas Valley area, provide public lands for the expansion of communities and developed areas throughout Clark County. In these areas, public lands should be disposed of as rapidly as practical by sale, R&PP, exchange, or by other appropriate authority to accommodate development needs. These disposals should be accomplished with minimal management or compliance responsibility remaining with BLM. All such disposals should be accomplished in coordination with local government.

Rationale:

The Bureau is not the proper agency to oversee the development of urban-suburban areas. Local government, particularly in the case of the Las Vegas Valley, is better staffed, funded, equipped, and experienced in matters of urban development. Retaining Federal ownership of lands needed for community expansion creates problems for BLM, which is not equipped to properly administer such lands, and for the community, which finds this Federal ownership a block to orderly growth. Disposal eliminates both problems identified, and generates revenue for the general public by selling lands not manageable under established BLM programs.

The inclusion of reversionary stipulations not required by law in patents and R&PP leases simply serves to continue this management problem for both the Bureau and community.

In Public Law 96-586 (The Santini-Burton Act), Congress took note of the intermingling of public and private lands in urban areas of Clark County and observed that certain of these lands should be sold to promote the orderly development of those communities. Moreover, Sec. 203 of Public Law 94-579 (FLPMA) provides for disposal of public lands when such conditions exist that make Federal management difficult and disposal would meet important public purposes such as community expansion.

43 CFR 2400 discusses classification of public land for disposal, and Subpart 2430.5 sets criteria for classification of lands valuable for residential, commercial, agricultural, or industrial purposes. This section requires that disposal be consistent with local government plans. In 43 CFR 1725.2 is the requirement that transfer of public lands out of Federal ownership be done in the most efficient manner possible.

Multiple Use Analysis

The objective meets the management needs of the Bureau as well as policy guidance provided by Congress in FLPMA (Sec. 202) and in the Santini-Burton

(Lands 1.0 continued)

Act of 1980, regarding disposal of public land in the Las Vegas Valley. It would have positive economic and social benefits in Southern Nevada.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

At 10:00 AM, the following information was received from the Los Angeles Office:

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Lands

Overlay Reference

Step 1

Step 3

Recommendation 1.1:

Dispose of all lands within the Las Vegas Valley identified on the Las Vegas Valley Sub-Unit MFP 1 Disposal Opportunities Overlay. Disposal to be accomplished by sale, R&PP, or other appropriate authority.

Support Needs:

Appraisals, clerical support, cadastral survey, Cultural Resources, and minerals.

Rationale:

These lands are needed for the expansion of urban Las Vegas, cited in the 1980 census as one of the top ten growth cities in the United States. The lands are not identified as needed for any Federal program. In addition, no existing BLM program could effectively manage this area. Processing of use authorizations in this area is a constant workload. The problems of illegal occupancy, dumping, and other trespass are rampant, and would be eliminated by disposal. Retention of these lands puts the Bureau in the de facto position of being an urban planning agency, for which it is ill equipped.

Multiple Use Analysis

(Includes Watershed 2.1 and 2.2)

Disposal of these lands would conflict with Minerals recommendation 1.3, to establish sand and gravel pits in the Las Vegas Valley. The intensive construction and development taking place in Las Vegas has resulted in a need for exploitable sand and gravel sources. The disposal of lands needed for these pits, or the disposal of lands adjacent to them could prevent or conflict with use of the sand and gravel deposits.

Forestry recommendation 1.2 suggests leasing lands to nurserymen to produce desert vegetation, the goal being to decrease domestic water consumption through use of desert ornamental plants. Disposal of lands in the Las Vegas area would preclude short-term leasing. While such leases outside the Valley may be appropriate, the per-acre value of Valley parcels would likely make such use unprofitable for the lessee as well as a BLM management burden.

Watershed recommendations 2.1 and 2.2 call attention to requirements to consider floodplains in disposal actions. Clark County does have an active floodplain management agency.

The opportunities for multiple use management, under existing BLM programs, in the Las Vegas Valley are nil. The urban character of the area makes management for recreation, forestry, livestock grazing, wildlife, and most mineral production impractical.

(Lands 1.1 continued)

As documented in the Clark County Planning Area Analysis, the public will continue to demand sale or disposal of public lands in the Las Vegas Valley. The passage and positive reception of the Burton-Santini Act (requiring sale of Las Vegas Valley Federal lands) is an example of the public's perception that continued Federal ownership of lands in the Las Vegas Valley is inappropriate. Clark County URA data showed that local officials perceive a real need for these sales, with emphasis on orderly, well-managed disposal.

Multiple Use Recommendation:

Dispose of all public lands within the Las Vegas Valley with priority to the Santini-Burton Act area, identified on the Las Vegas Valley Sub-Unit MFP 1 Disposal Opportunities Overlay. To provide maximum management flexibility, all disposal will be by the most appropriate authority available. Parcels needed for sand and gravel pits or adjacent to sand and gravel pits will be disposed of on a lowest priority basis, with parcels in high density developed areas disposed of first. Consider Clark County to have met the requirements for ability to maintain or restore beneficial floodplain values. All disposals will be in coordination with local government officials and agencies.

Support Needs:

As stated in MFP 1.

Reason:

Continued disposal of public lands in the Las Vegas Valley is perceived by local citizens and officials as being necessary to assure orderly and manageable growth of the urban area. Accomplishing disposals by whatever authority is most appropriate in an individual situation will permit the needed flexibility in accommodating the diverse needs of the Las Vegas urban area. Disposing of gravel pit areas last, after the removal of the valuable aggregate, will insure a continued supply of these materials to the public and the construction industry at reasonable costs.

Alternative Considered:

Retain all lands in Federal ownership.

Decision:

Modify MFP II recommendation to be read as follows:
Dispose of all public lands (approximately 108,107 acres) within the Las Vegas Valley with priority to the Santini-Burton Act area, identified on the Las Vegas Valley Sub-Unit MFP 1 Disposal Opportunities Overlay. To provide maximum management flexibility, all disposal will be by the most appropriate authority available. Parcels needed for sand and gravel pits or adjacent to sand and gravel pits will be disposed of on a lowest priority basis, with parcels in high density developed areas disposed of first. Consider Clark County to have met the requirements for ability to maintain or restore beneficial flood-

Reasons:

One comment indicated that BLM should not dispose of any Federal land to private individuals or interest groups; nor should the agency dispose of all federal land in Las Vegas Valley. The Bureau, in response to this comment, feels that its obligation to provide urban, commercial, and industrial land to the general public is unquestionable. Local government supports this decision and feels the disposal boundary established is appropriate. Another comment stated that BLM should have the final decision on lands to be disposed, rather than the local government having that decision-making power. In response to this comment, the BLM would always have the final decision authority on disposi-

(Lands 1.1 continued)

plain values. All disposals will be in coordination with local government officials and agencies.

tion of public land. One comment stated that BLM should have mentioned Floyd Lamb State Park as a future R&PP disposal action to the State of Nevada. In response, the BLM has identified R&PP as a method of disposal of lands in the Las Vegas Valley. The Bureau would accept the R&PP applications and process each case on its own merits. The BLM realizes the need for park facilities, as well as other public purpose facilities, as part of our disposal efforts in the Las Vegas subunit. However, BLM feels it is inappropriate to mention a specific application because of its discretionary nature. Another comment indicated a desire to see recognition of the potential to use Las Vegas Valley lands as an exchange base for private lands at Mt. Charleston. In response, BLM supports the use of the valley lands for such purposes and feels the flexibility is built into this decision. One comment indicated that BLM should prioritize disposal actions, with R&PP applications first, P.L. 96-586 sales second, other land sales third, in-county exchanges fourth, and cross-county exchanges fifth. In response, the BLM has the flexibility in the disposal system and in this decision (i.e., local government coordination) to determine the appropriate method of disposal.

Step 1

Step 3

Recommendation 1.2:

Dispose of all public lands within the following communities through sale, exchange, R&PP, or other appropriate authority by 1990. This disposal would be undertaken to accommodate community expansion, and to eliminate isolated parcels of public land surrounded predominately by private lands.

- 1) Indian Springs
- 2) Goodsprings
- 3) Searchlight
- 4) Nelson

Support Needs:

Appraisal, clerical, cadastral survey, minerals, cultural resources.

Rationale:

These lands have not been identified as needed for any Federal program. Existing BLM programs cannot provide effective management of these lands. In addition, continued Federal ownership of these parcels tends to place an artificial limit upon orderly growth and economic development. The establishment of the original townsite assumed eventual private ownership of all small parcels therein. However, repeal of the townsite and small tract authorities prevented continued disposal.

Multiple Use Analysis

No specific parcels have been identified, and therefore no specific conflicts have emerged. However, disposal in certain areas may conflict with other programs and MFP recommendations. Generally, however, the acreages in question are too small to significantly impact existing multiple use programs or seriously conflict with other MFP recommendations intending for public lands to remain open or in a protected status. In reality, most BLM management programs are inappropriate in and around existing settled suburban areas.

The minor losses to other resources by these disposals would be more than offset by the positive socio-economic benefits. The Clark County PAA clearly identifies the presence of continued demand for public lands in and around communities. In addition, public attitudes clearly support BLM disposal of these small parcels of public lands in and around growing communities. The Clark County URA data reflects the concern of local government that orderly growth of these communities is hampered by the presence of public lands within and adjacent to their communities.

Land
Bureau of Land Management
U.S. Department of the Interior

Introduction

Review of all public lands within the
Hodgson Mountain area through a
comprehensive, multi-year effort
beginning in 1990. This document
will be updated as necessary
to reflect changes in management
priorities, and to address
land use needs of public lands
management stakeholders in private

- 1. Land Use Planning
- 2. Management
- 3. Conservation
- 4. Recreation
- 5. Research

Management Goals

Develop, implement, and monitor
management plans for public lands.

Public Land Analysis

In specific areas have been identified, and therefore no specific management
plans are needed. However, it should be noted that some areas may conflict with other
plans and the management plan. Therefore, the management plan
should be updated as needed to reflect changes in management priorities and
to address conflicts with other management plans. In addition, the
management plan should be updated as needed to reflect changes in management
priorities and to address conflicts with other management plans.

The management plan should be updated as needed to reflect changes in management
priorities and to address conflicts with other management plans. The management plan
should be updated as needed to reflect changes in management priorities and
to address conflicts with other management plans. The management plan should
be updated as needed to reflect changes in management priorities and to
address conflicts with other management plans. The management plan should
be updated as needed to reflect changes in management priorities and to
address conflicts with other management plans.

(Lands 1.2 continued)

Multiple Use Recommendation:

Dispose of all public parcels within the settled limits of the following communities:

- 1) Indian Springs
- 2) Goodsprings
- 3) Searchlight
- 4) Nelson

Disposal of these parcels should be on an as-needed basis, and should be accomplished by the most appropriate disposal authority. All disposals should be in coordination with local government, with the goal of complete disposal in the communities completed by 1990, unless sound management or statutory constraints preclude meeting this deadline.

Support Needs:

As stated in MFP 1.

Reason:

Continued disposal of lands in and around existing communities will provide for needed "growing room" for these towns, while satisfying the public's strong desire to see these disposals take place. In addition, the management problems confronting BLM in its stewardship of these lands (e.g., trespass, right-of-way processing, etc.) will be eliminated. The blocking of Federal and private lands has long been recognized as a desirable management objective.

Alternatives Considered:

1. Retain lands in Federal ownership.
2. Dispose of lands by Indian Springs.

Decision:

Modify the MFP II recommendation to read as follows:

Dispose of all public parcels of land within the settled limits of the following communities:

- 1) Indian Springs (approximately 382 acres)
- 2) Goodsprings (approximately 880 acres)
- 3) Searchlight (approximately 640 acres)
- 4) Nelson (approximately 312 acres)
- 5) Laughlin (approximately 1,280 acres)

Disposal of these parcels should be on an as-needed basis, with perimeters established in coordination with the appropriate government entity and should be accomplished by the most appropriate disposal authority. All disposals should be in coordination with local government, with the goal of complete disposal in the communities completed by 1990, unless sound management or statutory constraints preclude meeting this deadline.

Reasons:

One comment indicated that BLM should not dispose of any Federal land to private individuals or special interest groups. In response, the BLM feels it is our obligation to provide land to any interested persons or groups, as qualified, to enhance community expansion.

One comment indicated that BLM should have mentioned the Valley of Fire and Arrow Canyon State Parks as future R&PP disposals to the State of Nevada. In response, the BLM has identified R&PP as a method of land disposal in the small communities. The Bureau would accept the R&PP applications and process each case on its own merits. The BLM realizes the need for park facilities as part of our disposal efforts in the small communities. However, BLM feels it is inappropriate to mention a specific application because of its discretionary nature.

(Lands 1.2 continued)

Another comment indicated that the word "public" should be changed to "Federal" or "Bureau of Land Management" because "public" could refer to State or local government lands. In response, the Federal government has referred to lands administered by BLM as "public lands" for years. Therefore, to maintain consistency in use of terms, BLM will continue to use the term "public lands."

A comment indicated that due to Laughlin's extensive growth potential, it should be placed under Lands 1.2, rather than under Lands 1.3. In response, the BLM agrees. Therefore, Lands 1.2 was modified to include Laughlin in the decision. Lands 1.3 also reflects this change.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Lands
Overlay Reference	Step 1 Step 3

Recommendation 1.3:

Through appropriate authority, transfer into private ownership by the year 2000 all isolated parcels of public lands of 160 or less coterminous acres within the following general settlement areas:

- 1) Eastern Pahrump Valley
- 2) Mountain Springs Community
- 3) Sandy (Mesquite Valley) Community
- 4) Jean
- 5) Sloan and "Sloan Turn-Off" areas
- 6) Blue Diamond
- 7) Moapa Valley Area
- 8) Virgin Valley Area
- 9) Kyle Canyon Road Small Tract Area
- 10) Laughlin

Support Needs:

Appraisal, clerical, cadastral survey.

Rationale:

These lands have not been identified as needed for other Federal programs. Existing BLM programs cannot effectively manage these isolated parcels surrounded predominately by private lands. In many situations, use authorization and pursuit of trespasses consumes far more manpower and administrative resources than are ever returned to the public through resource management. Disposal would also allow expansion of existing and growing communities and satisfy the goal of "blocking" Federal and private holdings. In many of these areas, small communities are completely "landlocked" by Federal lands. Transferring into private ownership the small parcels of public land within these communities would effectively respond to the pressure for expansion which now exists.

Multiple Use Analysis

Disposal of public lands in and around established communities generally eliminates BLM management problems, does not significantly detract from BLM programs, allows for community expansion, and satisfies the public's perception that such lands belong in private hands, available for development. The same factors and information sources cited in Lands recommendations 1.1 and 1.2 also apply here, and need not be repeated.

Multiple Use Recommendation:

Through appropriate authority, transfer out of Federal ownership all isolated parcels of 160 or less coterminous acres in those general settlement areas listed in this recommendation. Total blocking of public and private lands by the year 2000 should be a reasonable goal, but not a mandatory deadline.

Reason:

The reasons for disposing of these lands are the same as cited for recommendations 1.1 and 1.2. While using the year 2000 as a desirable projected date for completion of disposals, all disposal should be on an as-needed basis, and should be accomplished in coordination with local government.

(Lands 1.3 continued)

Support Needs:

As stated in MFP 1.

Alternative Considered:

Retain lands in Federal ownership.

Decision:

Modify the MFP II recommendation to read as follows:

Through appropriate authority, transfer out of federal ownership all isolated parcels of 640 or less coterminous acres in the following general settlement areas:

- 1) Eastern Pahrump Valley (approximately 1,000 acres)
- 2) Mountain Springs Community (approximately 65 acres)
- 3) Sandy (Mesquite Valley) Community (approximately 1,098 acres)
- 4) Jean (approximately 590 acres)
- 5) Sloan and "Sloan Turn-Off" areas (approximately 2,065 acres)
- 6) Blue Diamond (approximately 326 acres)
- 7) Moapa Valley Area (approximately 1,080 acres)
- 8) Virgin Valley Area (approximately 1,127 acres)
- 9) Kyle Canyon Road Small Tract Area (approximately 4,500 acres)

Any community expansion (non-Bureau initiative) requests will be dealt with on an as-needed basis. Total blocking of public and private lands by the year 2000 should be a reasonable goal, but not a mandatory deadline.

Reasons: One comment indicated that we should not dispose of any Federal land to private individuals or special interest groups. In response, the BLM feels it is our obligation to provide land to any interested persons or groups, as qualified, to enhance community expansion.

Another comment indicated that BLM should dispose of the land strictly for agricultural or husbandry purposes. In response, the Bureau has the responsibility to dispose of the land, and local government has the responsibility for zoning uses. It would be inappropriate to identify all lands in those communities for a single purpose.

A comment stated that BLM should remove Laughlin from the list of communities in Lands 1.3 and add it to Lands 1.2. In response, the Bureau agrees, and the appropriate changes have been made.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Lands

Overlay Reference

Step 1

Step 3

Recommendation 1.4:

Provide public lands for short-term lease (not to exceed 10 years) under P.L. 94-579, upon request, when all the following conditions are in effect:

- 1) The parcel is adjacent to or in proximity to private lands, unless an overriding need is documented.
- 2) Local government approves of the lease.
- 3) No BLM resource management program would be adversely affected.
- 4) Leasing is preferable to sale because of the anticipation that the land will appropriately be returned to the pool of open public lands at a later date.
- 5) Disposal by sale is not appropriate.

Support Needs:

Appraisal, clerical support, cadastral survey, cultural resources.

Rationale:

In many situations lands not suitable for final disposal by sale are needed by groups, individuals, or firms for legitimate and worthwhile purposes not readily accommodated under TUP or R/W authorities. Allowing these uses under short-term lease would provide lands for residential, agricultural, commercial, or other uses for limited periods without altering the land ownership pattern permanently.

This action would allow BLM to be more responsive to the needs of the public. The short-term nature of the leases would be well suited to the constant changes in land use patterns created by mining, mineral development, ranching, farming, recreation, and ownership for eventual return to open status.

The 10-year limit reflects a midground between the five-year lease review, with option to renew, under the R&PP regulations and the 20-year right-of-way review provision. A lease term longer than 10 years would imply a permanence factor not intended. A sale would probably be more appropriate under those circumstances.

Multiple Use Analysis

(Includes, Forestry 1.2 and Watershed 1.2 and 4.7)

Leasing of public lands for short-term private/commercial use would take place primarily in rural areas where no private land base exists, since the goal in urban/suburban areas is to dispose of public holdings. Such leases could conflict with wildlife (Range Management 1.1), livestock grazing (Range Management 1.1), mining (Minerals 1.1), or other uses in these areas of primarily solid-block public ownership.

(Lands 1.4 continued)

Nonetheless, overriding socio-economic considerations may in some instances, justify such a lease, even to the detriment of competing resource values or programs. In many cases, such leases would have little or no impact upon existing or potential BLM programs, and would satisfy needs for lands to accommodate useful private or commercial facilities. The PAA clearly identifies the public perception that the BLM is unresponsive to needs for public lands for private and commercial uses.

Leasing lands for short-term use, under the conditions spelled out in the recommendation above, would not permanently remove lands from public ownership. Regulations have established that leasing for various private and commercial uses is indeed BLM policy, if need is justified and impacts are adequately assessed and mitigated.

One such use of leased land would be for development of nurseries for propagation of desert plants for use in landscaping in Las Vegas (WS 1.2 and Forestry 1.2). While the concept has merit as a water conservation incentive, it would not be appropriate for BLM to actively promote such leases. Such a proposal, however, if generated from the private sector, should be evaluated on its overall merits as any other application would.

Multiple Use Recommendation:

Grant leases to accommodate private and commercial uses on a case-by-case, as-needed basis, in keeping with BLM policy. Be guided in leasing by the conditions listed in recommendation 1.4.

Reason:

Situations arise wherein a positive benefit may be derived by accomplishing a short-term lease as outlined above. To maintain a visible responsiveness to public needs and allow for necessary development, some private/commercial leases will be desirable. This will help satisfy the steady stream of requests for such leases received by BLM. The Clark County PAA projects that these lease requests will continue to be received. The development of any portion of the proposed MX missile project would greatly increase this demand for leases for support facilities and businesses. With this lease authority and the guidelines mentioned, BLM will be in a favorable position to accommodate needed facilities.

Support Needs:

As stated in MFP 1.

Alternative Considered:

No leasing.

Decision:

Accept MFP II recommendation as written.

Reasons:

A comment stated opposition to any exploitation of public land. In response, the BLM will work closely with local government to insure that uses are consistent with local government.

Overlay Reference
Step 1 Step 3

Recommendation 1.5:

Permanently close to livestock grazing public lands in Las Vegas Valley bordered by the following allotments(A) or Federal withdrawals: Dry Lake(A), Muddy Mountains(A), Lake Mead National Recreation Area, Ireteba Peaks(A), McCullough Mountains(A), Hidden Valley(A), Spring Mountain(A), Kyle Canyon(A), Lucky Strike(A), and the Desert National Wildlife Range (to Indian Springs). Initiate the closure during FY83.

Support Needs:

Range staff; Congressional concurrence.

Rationale:

This area of the District is currently unallotted. Within Las Vegas Valley proper, livestock grazing would be strongly incompatible with the burgeoning growth, particularly in so far as Nevada is an open range state. Along the north side of U.S. Highway 93, the narrowness of the public land area would invite damaging trespass on the Desert National Wildlife Range and the Nellis Bombing and Gunnery Range.

In addition, grazing on this area would promote dangerous confrontations between livestock and motorists on Highway 93. Congressional concurrence is required under Sec. 202(e)(2) of P.L. 94-579 when a major use is excluded from 100,000 or more acres of public land.

See Range Management 1.2 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Lands
Objective Number
L-2

Objective 2.0:

In areas suitable for agriculture, provide public lands for agricultural use through appropriate authority. Also, provide public lands through appropriate authority in agricultural areas for residential and commercial use to avoid loss of productive farm lands.

Rationale:

Farm operations are an important element of several smaller communities in Clark County, particularly the Moapa-Glendale-Overton area and the Sandy or Mesquite Valley area. While agriculture is not a major economic factor county-wide, it is a major social and economic factor in these outlying communities. Should water be available for agriculture, these areas, of all in the county, would most likely be prepared to make use of it.

At the same time, these communities are experiencing moderate growth rates. The loss of productive croplands in these areas due to population increases has and will continue to have an adverse effect upon agriculture, partly due to the "landlocked" nature of these areas, surrounded, as they are, by Federal lands.

According to 43 CFR 2430.5, public lands valuable for agricultural uses should be classified for the purpose which represents "this 'highest and best use' of the lands, i.e., their most profitable legal use in private ownership."

Multiple Use Analysis

As written, the objective meets Bureau policy and guidance provided in FLPMA (Sec. 202, 203). As an effort to protect an important rural life style in Clark County, it would be very favorably received by Southern Nevadans.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Lands
Overlay Reference	
Step 1	Step 3

Recommendation 2.1:

In areas suitable for establishment or expansion of agricultural operations, both conventional and experimental, provide public lands (not to exceed 320 acres per individual) through lease, or dispose through appropriate authority, to accommodate agricultural use.

Support Needs:

Economic, soil, and water evaluations of candidate areas; clerical, cultural resources, minerals.

Rationale:

Agriculture is an important contributor to the economy of many rural areas of Clark County. Existing agricultural entry authorities are extremely limiting in scope, acreage, and development constraints. Leasing of agricultural lands would provide needed management flexibility to allowing economic growth and development in this sector.

In addition, areas such as Glendale, Moapa, Overton, and others have experienced a net loss in productive cropland in recent years due to residential expansion. Expansion of agriculture onto suitable public lands would adjust for this trend, and allow full utilization of water and other resources.

Multiple Use Analysis

Lease or disposal of public lands for agricultural use would conflict with numerous resource recommendations, including Minerals (1.2), Range Management (1.2, 1.4), Watershed (2.1, 2.2, 2.3), and Wildlife (2.1, 2.2). The underlying conflict with these various recommendations is, simply, the conflict between retention for management of a specific resource as opposed to disposal or elimination of BLM management controls to allow for private use.

Certain areas of Clark County contain potential agricultural lands which have little or no value for other resources or uses. Conversely, certain potential agricultural lands may contain valuable minerals, wildlife habitat, cultural resources, or other values. In some cases, these lands could be best managed by retention as public lands.

There are instances, however, where the availability of water, satisfactory soil conditions, minor impact on other resource values, and socio-economic benefits make such agricultural use the most advantageous use of the land. Some environmental effects will result whenever unused lands are brought under cultivation. Still, the positive socio-economic impacts, particularly to

(Lands 2.1 continued)

rural, agricultural communities, would often outweigh the negative environmental impacts. The Clark County PAA clearly identifies the importance of the rural lifestyle of these communities to the residents, as well as the problems created by depletion of the agricultural land base because of residential expansion.

One area where agricultural use might create significant impacts to wildlife habitat is in the Muddy and Virgin River areas.

Multiple Use Recommendation:

By appropriate authority, lease or dispose of lands determined suitable for agricultural production or experimentation, where significant impacts to other resources would not result. Leases or disposals in excess of 320 acres per individual require justification of the increased acreage. Lease or dispose of no lands in the Muddy or Virgin River flood-plains until completion of an adequate HMP, scheduled for 1984.

Reason:

Greater flexibility is needed in accommodating new agricultural production and experimentation than is provided by existing agricultural entry laws. Still, limiting such leases and disposals to 320 acres, as a general guideline, will be consistent with those agricultural entry laws still in effect.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Dispose only through DLE or Carey Acts.
2. No agricultural lease.

Decision:

Accept MFP II recommendation as written.

Reasons:

In a comment it was requested that the BLM not sacrifice agricultural lands for subdivisions. In response, the Bureau will determine the best use of the land on a case-by-case basis. This will be done in close coordination with State and local governments to ensure proper utilization of the land.

The agricultural committee will also submit the necessary recommendations. The Land Commission has identified the importance of the rural economy and the need for the government to take action to improve the agricultural sector.

The committee will also submit recommendations on the way forward for the agricultural sector.

Recommendations
The committee has identified the need for the government to take action to improve the agricultural sector. It has identified the need for the government to take action to improve the agricultural sector.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Lands

Overlay Reference

Step 1

Step 3

Recommendation 2.2:

Provide public lands under appropriate authority for commercial, industrial, and residential use in existing agricultural areas. These areas include, but are not limited to:

- 1) Pahrump Valley (Eastern)
- 2) Sandy (Mesquite) Valley
- 3) Virgin River Valley
- 4) Moapa - Logandale area

Support Needs:

Appraisal, clerical, cadastral survey, cultural resources, minerals.

Rationale:

Agriculture is important to the economy and lifestyle of these areas. For the most part, private lands are in use as cropland. The continued population growth of these areas would require development of farmlands for residential-commercial use unless public lands are made available as recommended. Continued loss of productive farmland to development creates many negative impacts to the socio-economic base of rural communities.

Multiple Use Analysis

This recommendation complements Lands MFP Step 2 Multiple Use Recommendations 1.2, 1.3, 1.4, and 2.1. Generally speaking, developed agricultural areas may be considered as solely committed to agricultural and residential use. Parcels of public lands within these areas usually have little value for BLM multiple use management.

The Clark County PAA describes the negative socio-economic impacts that result when agricultural lands in these small communities are developed for residential and commercial use. Such a transition can prove devastating to overall agricultural production, and can alter the basic lifestyle of the entire community.

Conflicts which may arise would be the same as those listed for the Step 2 Multiple Use Recommendations noted above. In some instances, even major socio-economic motivation may be overridden by acute environmental problems. Case-by-case examination of lease or disposal opportunities would identify such conflicts.

Multiple Use Recommendation:

In those areas identified, provide public lands to accommodate commercial, industrial, and residential uses in agricultural communities. Each lease/disposal

Reason:

Accommodating commercial, industrial, and residential uses by leasing or disposing of public lands in these agricultural areas, without creating significant environmental impacts,

(Lands 2.2 continued)

opportunity will be examined individually to assure that the most advantageous use of the land takes place.

Support Needs:

As stated in MFP 1.

would help preserve the economic and social basis of the communities. This would be accomplished by allowing productive cropland and existing farms to remain.

Alternative Considered:

Allow continued conversion of agricultural lands to other purposes.

Decision:

Modify the MFP II recommendation to read as follows:

In Pahrump Valley (Eastern), Sandy (Mesquite) Valley, Virgin River Valley, and the Moapa-Logandale area, provide public lands to accommodate commercial, industrial, and residential uses in agricultural communities. Each such lease/disposal would be made only on community nomination and on assurance that the community does indeed desire such agricultural land preservation steps.

Reasons:

A comment indicated that BLM should encourage farming. In response, the Bureau, along with local communities, will encourage the best land uses possible, including farming. Another comment indicated that BLM should emphasize agricultural preservation as a means of distinguishing Lands 1.2 and 1.3 from Lands 2.2. In response, the Bureau agrees with this concept and has made the appropriate modification in this decision.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Lands

Objective Number

L-3

Objective 3.0:

Provide public lands in Clark County for transportation, energy transmission, communications, and related facilities and systems through appropriate authority.

Rationale:

The need to provide public lands or the use of public lands to accommodate these systems and facilities is based on the geographic location of Clark County between the population centers of Southern California and energy-producing areas of the Rocky Mountains. Southern California is a major energy user. Currently, the demand is satisfied by imported oil, but a shift is slowly occurring to U.S.-produced energy. The fossil fuels of Utah and Wyoming are a key potential source. Because of the major corridor obstacles posed by the Nellis Range, Nevada Test Site, Desert National Wildlife Range, Lake Mead National Recreation Area and Grand Canyon National Park, Clark County is the principal route between the supply and demand areas.

The rapid growth of Las Vegas causes a similar energy, transportation, and communications requirement to satisfy local needs for these services.

P.L. 94-579 (FLPMA), in Section 503, calls for common use of rights-of-way wherever possible to minimize adverse environmental impacts and avoid corridor proliferation.

Under 43 CFR 1725-3-3(e) the BLM is charged with administration: "Management of public lands for occupancy involves the protection, regulated use, and development of lands as sites for economically and socially useful structures, either publicly or privately owned."

Multiple Use Analysis

This use of public lands is consistent with a host of laws regarding rights-of-way and with Title V of FLPMA. It offers real, needed services to Clark County residents.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY SUMMARY

Project Number	1000-10-0010-1000
Class	Class 1000
Activity	Activity 1000
Location	Location 1000
Date	Date 1000

Public lands are those lands owned by the United States, including the National Forest System, National Wildlife Refuge System, and National Monument System. Public lands are managed for the benefit of the present and future generations of Americans, and to provide for the enjoyment of the people of the United States.

The Bureau of Land Management (BLM) is responsible for managing public lands. The BLM's mission is to sustain the health and productivity of public lands, to provide for the enjoyment of the people of the United States, and to protect the values of public lands. The BLM's management framework plan is a document that describes the BLM's management approach, including its goals, objectives, and strategies. The BLM's management framework plan is a living document that is updated as needed to reflect changes in the BLM's management approach.

The BLM's management framework plan is a document that describes the BLM's management approach, including its goals, objectives, and strategies. The BLM's management framework plan is a living document that is updated as needed to reflect changes in the BLM's management approach.

The BLM's management framework plan is a document that describes the BLM's management approach, including its goals, objectives, and strategies. The BLM's management framework plan is a living document that is updated as needed to reflect changes in the BLM's management approach.

The BLM's management framework plan is a document that describes the BLM's management approach, including its goals, objectives, and strategies. The BLM's management framework plan is a living document that is updated as needed to reflect changes in the BLM's management approach.

Wildlife Use Analysis

This use of public lands is consistent with a host of laws regarding wildlife and with the BLM's mission. It is also consistent with the BLM's management framework plan, which calls for the BLM to manage public lands for the benefit of the present and future generations of Americans, and to provide for the enjoyment of the people of the United States.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Lands

Overlay Reference

Step 1

Step 3

Recommendation 3.1:

Limit issuance of major transportation system R/Ws to corridors shown in the Nevada Transportation and Utility Corridor Study (under preparation by BLM Nevada State Office). Allow major system construction outside these corridors only when severe use conflicts, engineering constraints, or negation of the system's purpose would result from using the existing corridor. Minor deviation, widening, or alteration of the corridor should not be considered as "outside of corridor" construction.

"Major systems" means the following facilities:

Electrical = 66 kv or above

Pipelines = 6" diameter or larger

Highways = Paved highways in excess of one travel lane each direction

Railroads = All

Interstate Telephone Toll Lines = All

Support Needs:

NSO Study completion.

Rationale:

Use of identified or designated corridors would minimize adverse impacts associated with transmission line proliferation and avoid isolating, and thereby restricting multiple uses on, parcels of public lands.

Multiple Use Analysis

Southern Nevada lies in the path between the energy-consuming West Coast and the energy-producing Rocky Mountains of Utah and Wyoming. As a result, numerous existing and proposed utility systems cross Clark County. Every such system creates numerous resource conflicts which must be analyzed and mitigated. In some instances, socio-economic factors result in some

(Lands 3.1 continued)

environmental degradation, while in other instances, special environmental values result in rerouting or special mitigation of impacts.

Limiting system construction to established corridors is usually desirable from a multiple use standpoint. However, the referenced Nevada Transportation and Utility Corridor Study has not been completed, so identification of specific conflicts or values is not possible. Further, different types of systems may create different impacts within the same corridor, and result in very different effects upon competing or existing uses.

Particular problems exist in Las Vegas Valley. The intensive urban development, plus a variety of other constraints, make the Valley a true critical path along the Southern Nevada corridor route to Southern California. The most likely route--Sunrise Mountain-Las Vegas Wash-Henderson-McCullough Station--is rapidly reaching its apparent capacity. A proposal in Congress to sell the public land in the Henderson corridor to the city, could complicate the right-of-way process.

The completion of a comprehensive EIS covering the corridor study, or an EIS for each major system, would serve to identify use conflicts and impacts.

Multiple Use Recommendation:

Do not establish utility system corridors until the completion of the Nevada Transportation and Utility Corridor Study. In the interim, grant system rights-of-way on an individual basis.

Reason:

It would be inappropriate to accept the corridor study as the decision even before the study is completed and before the completion of environmental review. Granting systems on a case-by-case basis will allow adequate assessment of each project.

Support Needs:

NSO Completion of Study; EIS/EA.

Alternative Considered:

Manage Clark County under the "window-sensitive area" concept.

Decision:

Do not establish utility system corridors until the completion of a Transportation and Utility Corridor Study. (L 3.1)

Reasons:

One person commented that he felt Lands 3.1 may be in conflict with NEPA. In response, the Bureau will analyze an application on a case-by-case basis, preparing appropriate environmental documents to ensure compliance with all environmental regulations and laws.

environmental degradation will be other than minor, special environmental
studies will be required to provide additional information.

Existing water resources in the proposed corridor are generally adequate
for a water supply. However, the proposed water transmission
and distribution system has not been completed, and identification of
specific facilities or water is not possible. Further, different types of
systems may require different inputs within the same corridor, and there is
very different water use depending on existing uses.

Particular attention will be given to the water supply. The proposed water
development, along with other water projects, will be a major
activity along the proposed corridor route to Southern California.
The water supply transmission facilities will be identified and
located to provide water to the proposed corridor. A project is planned to
study the water supply in the proposed corridor to the city, water supply
and the water supply.

The completion of a transmission line between the corridor study area and the
city water supply, would serve to identify new facilities and projects.

Water Supply and Distribution

It is not possible to identify water
resources within the corridor of the
proposed transmission and distribution
corridor study. In the future, a
water supply study on the proposed
corridor.

Water Supply

The completion of the study will be.

Water

The water resources in the
corridor study area are
adequate for the study. In response, the water will
be used as a water supply in a
water supply study, providing
adequate water supply information to
identify water supply and
water supply with all
environmental facilities and land.

Water

It is not possible to identify water
resources within the corridor of a
proposed transmission and distribution
study. (Page 3-1)

Overlay Reference

Step 1

Step 3

Recommendation 3.2:

Promote expansion and multi-user growth of existing communication sites where technical considerations allow. Designate and grant applications for use of new sites only upon justification that existing sites are unfeasible technically or economically. New sites should, of course, be developed as required and authorized pursuant to appropriate authority.

Rationale:

Advances in electronics technology has permitted much greater development of communication sites for multiple users formerly required to be separated by physical distance depending on the size of the facilities. This trend can be expected to continue. However, increased use of two-way, microwave, satellite, and other radiation communication systems can be expected to increase as well. Thus, further development of existing sites must be coordinated with development of new sites.

Multiple Use Analysis

The advancements of electronics and the increased use of two-way, microwave, satellite, and other communication systems is perpetuating the need for communication sites upon BLM lands. The use of existing sites is preferred, so that adverse impacts from construction, ingress and egress, installation, maintenance, etc., is minimized. New sites should only be considered when the user demonstrates that a new site is the only viable alternative. This recommendation conflicts with the migration routes and habitat of the bighorn sheep by allowing additional sites (Wildlife 1.37). The expansion of communication sites could conflict with efforts to reintroduce bighorn sheep into historical sites (Wildlife 2.4). The use of additional sites could conflict with the use of the sites for hang gliding (Recreation 2.7).

The restriction on approving new sites complements the recommendations (see Fire 1.2 and 1.4) to minimize fire losses by planning and pre-attack plans. It is also supported by the recommendation to restrict development in elk and bighorn sheep habitat.

Multiple Use Recommendation:

Accept the recommendation as written with the additional requirement that, unless road access exists to a

Reason:

The recommendation serves the growing communication needs of Southern Nevada while minimizing impacts to other

(Lands 3.2 continued)

proposed new site, access will be by helicopter only.

Support Needs:

Wildlife, VRM Programs.

resource uses. Helicopter access to new sites will assure that only the required site is disturbed.

Alternative Considered:

All road access to new sites.

Decision:

Accept the MFP II recommendation as written.

The MFP II recommendation is to accept the proposed new site, access will be by helicopter only. This recommendation is based on the fact that the proposed site is located in a remote area and access by road would be difficult and costly. Helicopter access is the most practical and least disruptive method of access to this site. The MFP II recommendation also states that all road access to new sites should be avoided to minimize disturbance to the environment. This recommendation is also based on the fact that the proposed site is located in a remote area and access by road would be difficult and costly. Helicopter access is the most practical and least disruptive method of access to this site.

Lands

Overlay Reference

Step 1

Step 3

Recommendation 3.3:

Where appropriate, grant airport lease applications for airport facilities within Clark County to increase the access by and qualities of air services in rural Clark County and to augment existing airport facilities.

Solicit local government and public input with the goals of:

- 1) Establish new or expanded airport facilities where such would be in the public's interest.
- 2) Avoid proliferation of airport leases within limited geographic areas or where such facilities would have no real value to the public, but would in fact serve only a private individual or firm.

Rationale:

The need for air services for commercial, private, and emergency purposes will continue to grow as a result of increased development of rural areas far from population centers. Growth of established communities will also require expansion of existing airports. The Bureau must be responsive to these needs since in many areas of Clark County sufficient private land for airport construction is not available at a reasonable price. In addition, the public demand for and recent growth of "air ambulance" and related emergency services will require establishment of additional airport facilities to serve various geographic areas.

Multiple Use Analysis

The needs for and uses of air travel in Southern Nevada are increasing. Air service is critical to the social, medical, communication, and economic functions of many communities. These factors, combined with the projected population increases and BLM's commitment to utilize public lands for public projects, will increase the number of applications for new or increased airport facilities. Prior to granting approval of these applications BLM must coordinate with Clark County officials to insure the project meets their approval. Approval of air facilities should be in concert with Clark County planning.

Multiple Use Recommendation:

Accept the recommendation as written, with emphasis upon coordination with local officials.

Reasons:

Expansion of air facilities on BLM lands will be needed. The high cost of facilities requires coordination with Clark County. This practice is consistent with current management objectives and goals.

Support Needs:

As stated in MFP 1.

Alternative Considered:

Requiring use of existing facilities.

Decision:

Accept MFP II recommendation as

Reasons:

A comment indicated that we do not

(Lands 3.3 continued)

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Minerals

Objective Number

M-1

Objective 1.0:

Manage public lands in Clark County so as to facilitate exploration and development of leasable, locatable, and salable minerals.

Rationale:

United States law and Federal regulations encourage the exploration and development of the nation's mineral resources. Recent international developments have generated "mineral" and "energy" crises which have prompted a government policy of freeing the United States from dependence on foreign mineral sources to the extent possible. In recent years, geologists have postulated that the Overthrust Belt, a geological formation believed to have high potential for oil and gas discoveries, runs through Southern Nevada.

Multiple Use Analysis

This objective is consistent with Bureau policy and mineral laws. It would be favored by most Southern Nevadans as a positive management step.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Minerals

Overlay Reference

Step 1

Step 3

Recommendation 1.1:

Manage all of the Federally-owned mineral estate in Clark County as open to mineral entry and to mineral leasing.

Support Needs:

All programs.

Rationale:

The Mining Law of 1872 grants, by law, the right of individuals to enter public lands and lay claim to and recover valuable minerals found there. The act, and its amendments, also authorizes certain occupancy and disturbance of surface lands to accomplish this recovery of "locatable" minerals. To preclude the exercise of these rights, the BLM must identify a clear conflict between mining operations and other surface resource values and withdraw the lands from operation of the mining laws.

Exploration for and development of leasable minerals on the public lands is authorized under the Mineral Leasing Act of 1921, as amended. This law, and regulations pursuant to it, give the BLM broad authority to grant or deny (for good cause) mineral leases and to regulate, through lease stipulations, the manner in which the exploration and development takes place. To preclude leasing applications in a given area, the BLM would have to obtain Congressional approval to withdraw the area from leasing.

To explore for and recover mineral resources on the public land has been public policy in the United States for decades. In recent years, it has been well established that the United States has a critical need to assure a continued supply of strategic and important energy and mineral raw materials to maintain our national

Project Timeline	

1.0 Introduction

This document provides a framework for the reconstruction and redevelopment of the project area. It outlines the goals, objectives, and key components of the project, and serves as a guide for the project team and stakeholders.

2.0 Project Objectives

The primary objective of this project is to reconstruct and redevelop the project area in a way that is sustainable, efficient, and meets the needs of the community. Key objectives include:

- Reconstruct the project area in a way that is sustainable and efficient.
- Redevelop the project area in a way that meets the needs of the community.
- Improve the quality of life for the community.
- Enhance the economic development of the project area.

The project team will work closely with the community and stakeholders to ensure that the project meets their needs and expectations. The project will be implemented in a phased manner, with the first phase focusing on the reconstruction of the project area and the second phase focusing on the redevelopment of the project area.

The project team will also work to ensure that the project is implemented in a way that is transparent and accountable. The project team will provide regular updates to the community and stakeholders on the progress of the project, and will be open to feedback and input from the community and stakeholders.

Continued...

social, economic, and defense requirements. It has been equally well established that the United States, to an inordinate degree, must depend on foreign sources for nearly half of its petroleum requirements and, for some key mineral raw materials, such as chromium, platinum, tin, and cobalt, as much as 80 to 90 percent of our needs are supplied by foreign sources. The problem generated by that fact is that the instability of some foreign areas, and, in some cases, a positive hostility towards the United States, could reduce or eliminate those areas as energy and mineral raw material sources in the future.

As a consequence of this dependency, it has been the policy of past and current administrations to make maximum use of resources within the United States, including those found on public lands, to supplant foreign sources.

The Clark County URA establishes that there are a wide variety of actual or potential mineral finds in the county. Historical mining districts, mainly for gold and silver and associated minerals, blanket the county, from the Searchlight District in the south to the Gold Butte District in the northeast and the Mount Stirling District in the northwest. The fact that these are known mineralized areas, makes the likelihood of discoveries of valuable mineral deposits very high. Considering leasable minerals, Clark County is an area of high oil and gas activity because of the presence of the Overthrust Belt, a geological structure believed to have very high potential for oil and gas discoveries.

Most of the public lands mineral estate in the county is either under lease or has a lease application on it. Geophysical work to delineate likely oil and gas reservoirs is very intense.

To accommodate this exploration and development of mineral resources, and to minimize or mitigate adverse impacts on other surface resource values, several laws and regulations have been set in place. The surface management regulations (43 CFR 3809) give BLM the responsibility to require and oversee the reclamation of lands disturbed by mining activities. In advance of such activities, BLM has an opportunity to review mining operation plans and recommend changes to plan elements which would unduly cause adverse impacts to other resources. BLM has a similar opportunity to review and seek changes in plans to conduct oil and gas geophysical (seismic) work under 43 CFR 3045, which requires firms to provide the Bureau "notice of intent" to undertake such activity.

The Bureau has several opportunities to review proposals for oil and gas exploration. During the lease application stage, the Bureau can review areas to be leased for critical resources likely to be impacted and set certain stipulations on issued leases as general conditions of exploration and development which would protect such resource values. A similar opportunity for the Bureau comes with the review of the U.S. Geological Survey's environmental assessment of the Application for Permit to Drill (APD). The National

Environmental Policy Act requires these assessments to assure that impacts are identified to decision makers who thereby can take actions to mitigate those impacts.

In summary, there is a demonstrated need for energy and mineral resources development on public lands in Clark County; there is national policy which encourages such development, and there are ample analysis mechanisms available to offset adverse impacts to other resource values on a case-by-case basis, all of which warrants the conclusion stated in the recommendation.

Multiple Use Analysis

(Includes Wildlife 1.2, 1.10, 1.39, 3.1, and 3.2)

Numerous resource values have been identified as in conflict with mineral operations, i.e., oil, gas, and geothermal exploration, sand and gravel operations, and locatable mineral claims.

Wildlife recommendations 1.2, 3.1, and 3.2, address the limitation and/or prohibition of mining activities in crucial bighorn and desert tortoise habitat. All mining activities are viewed as threatening to bighorn sheep, especially in lambing and critical summer habitats, where such activities pressure sheep to avoid these important areas. Road development which provides access to mining areas, also opens up these areas to recreationists thereby adding to potential disturbance to these animals.

In critical desert tortoise habitat, road development for mining access is viewed as a major problem. By limiting activities, particularly seismic, to existing roads, trails, and washes, and by restricting activity to a time when tortoises are least vulnerable, during hibernation, this problem could be alleviated. Where habitat is disturbed in critical wildlife habitat, reclamation of the area through revegetation and road closure could greatly reduce any serious impacts to these animals.

Unique riparian habitat along the Virgin River could be adversely impacted if new oil and gas development and sand and gravel operations are permitted along adjacent public lands (Wildlife 1.39). The river has been identified as critical habitat to several native fish species including the endangered Woundfin (Plagopterus argentissimus) and Moapa Dace (Moapa coriacea). The Endangered Species Act of 1973 provides for the protection of these species.

(Minerals 1.1 continued)

Mitigating habitat disturbance by mining activities is not important exclusively to protected and endangered wildlife species. Studies have shown that specific desert washes support a wide variety and high density of wild bird species; in addition to the Gila monster, listed as rare by the State (refer to Nongame Bird URA III Overlay). Seismic activity as well as competitive ORV use can greatly impact significant riparian vegetation found in these areas and found to be important in providing food, cover, and nesting habitat. In addition to the protection offered these species and their habitat by Federal and State law, BLM Manual 6740 also provides for protection through buffer zones along riparian zones (Wildlife 1.10).

Mining activities in Clark County also present a point of conflict to the recreation resource. The Red Rock Canyon Recreation Lands, designated in 1967 and provided with management guidelines and directives in the mid-1970s, have been recognized as a potential source of extensive oil and gas reserves (Recreation 1.6). In June of 1980 the final draft of the Environmental Assessment of Oil and Gas Leasing in the RRCRL was released and has aided in reaffirming the direction of managing these lands as a prime recreation area.

Mining activities where aesthetic values are altered through surface disturbance would create a conflict to the establishment of natural areas in Clark County. Natural areas, set aside to preserve scientific and educational values and to promote the area for recreational uses should be protected in their existing condition as much as possible (Recreation 1.1). Natural areas in Clark County are the Pine Creek Research Natural Area, the Desert View Natural Environmental Area (Recreation 1.1), and the Virgin Mountain Natural Area (Recreation 1.3). Additionally, the California Desert Conservation Area (CDCA) has established a National Scenic Area contiguous to the Las Vegas District boundary. Until such time that a determination is made to continue the Scenic Area on the Nevada side of the state line, it is recommended that this acreage be protected (Recreation 1.9).

Pending admission to the National Preservation System, careful impact analysis is recommended for activities carried out in Wilderness Study Areas (WSAs). The interim management policy for lands under wilderness review does not preclude mining operations from taking place within a WSA (Recreation 7.1). It is felt that direct conflicts would be realized if surface disturbance was permitted.

Surface disturbance through mining presents a profound conflict in areas where cultural resource values are high or fragile soil conditions exist. In Clark County, the archaeological resource is rich in many locations. By disturbing the surface in such areas, the resource can be totally lost by actual destruction of relics or alteration of a site. In areas where high erosion conditions or hazards have been identified, care should be taken in maintaining the highest level of ground cover possible (Watershed 4.5). By limiting use in these areas, allowing minimum surface disturbance, protection could be afforded the watershed resource.

Following further discussion of mining activities in the immediate vicinity of the proposed and existing wildlife refuges, it was determined that special measures would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources.

Water activities in the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources.

Water activities in the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources.

Water activities in the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources.

Water activities in the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources. In addition to the wildlife resources, it was determined that the proposed and existing wildlife refuges would be required to protect the wildlife resources.

(Minerals 1.1 continued)

The public views the conflicts between mineral operations and other resource values with mixed emotions. There are extremes on both sides of the question. Most Southern Nevadans would most likely take the issue on a case-by-case basis and make judgements related to specific instances. Thus, there was a great outpouring in defense of the recreational uses inside Red Rock Canyon against oil and gas exploration, but little concern expressed about the gypsum mining operations on the opposite side of Blue Diamond Hill from Red Rocks (PAA).

Multiple Use Recommendation:

Modify the recommendation as follows:

Manage all of the Federally owned mineral estate in Clark County as open to mineral entry and to mineral licensing under the following guidelines:

1. Identify in all issued mineral leases, that impacts to crucial bighorn sheep and desert tortoise habitat will be subject to mitigative measures during the plan of operations stage.
2. Whenever possible, avoid surface disturbing activities under mineral entry 3809 plans of operations in bighorn sheep crucial summer habitat.
3. All roads created by mineral activities will be referred to the Area Manager for disposition prior to the end of the mineral activity.
4. Identify in all mineral leases issued in the floodplain of the Virgin River, that impacts to critical habitat of threatened or endangered species will be subject to mitigative measures during the plan of operations stage as identified through "Section 7" consultation.
5. Identify in all mineral leases issued for those washes identified on the Nongame Bird URA III Overlay, that impacts to those washes will be subject to mitigative measures during the plan of operations stage.
6. Whenever possible, avoid surface occupancy on or within 1/4 mile of developed or designated recreational facilities.

Reason:

As stated in the rationale for this recommendation, there are opportunities under the 3809 regulations and during the review of mineral lease plans of operations, to offset undesirable impacts to other resources from the mineral activities.

The public views the conflict between mineral operators and other resources as a zero-sum game. There are arguments on both sides of the question. Some argue that mineral operators are the only ones who can develop the resources and create jobs. Others argue that mineral operators are the only ones who can pollute the environment and destroy the land. The public views the conflict as a zero-sum game because they believe that the interests of mineral operators and other resources are mutually exclusive. They believe that if mineral operators win, then other resources will lose, and vice versa. This is a common misconception. In reality, the interests of mineral operators and other resources are not mutually exclusive. They can co-exist and even complement each other. For example, mineral operators can create jobs and develop the infrastructure needed for other resources to be developed. Other resources can provide the raw materials needed for mineral operators to produce their products. The public needs to understand that the interests of mineral operators and other resources are not mutually exclusive. They can co-exist and even complement each other. This is a common misconception. In reality, the interests of mineral operators and other resources are not mutually exclusive. They can co-exist and even complement each other.

Second
The second is the principle of the
third-party, there are
operational under the 1970
regulations and during the years of
mineral lease of use of operations, to
offset, undisturbed, benefits to other
resources from the mineral activities.

Mineral Use Recommendations
While the recommendation is to follow
the principle of the third-party, there are
several points to be considered
to ensure that the following
principles are followed:
1. Identify all mineral resources
known, that include mineral
resources known and potential resources
that will be subject to mining or
operations during the life of operations.
2. Wherever possible, avoid areas
disturbing activities under mineral
lease 3500 acres of operations in
places where mineral resources are
known or suspected to be present.
3. All areas subject to mineral
activities will be subject to the
same standards for operations prior to
the start of the mineral activities.
4. Identify all mineral resources
known in the District of the Virgin
Islands, that are subject to mining or
operations or suspected to be subject to
operations will be subject to operations
during the life of operations.
5. Areas as identified through "best
management."
6. Identify all mineral resources
known for those areas identified as
the Virgin Islands District, that
are subject to mineral activities will be
subject to the same standards for
operations during the life of operations.
7. Wherever possible, avoid areas
disturbing activities under mineral
lease 3500 acres of operations in
places where mineral resources are
known or suspected to be present.
8. All areas subject to mineral
activities will be subject to the
same standards for operations prior to
the start of the mineral activities.
9. Identify all mineral resources
known in the District of the Virgin
Islands, that are subject to mining or
operations or suspected to be subject to
operations will be subject to operations
during the life of operations.
10. Areas as identified through "best
management."

(Minerals 1.1 continued)

7. Identify in all issued mineral leases, that operations planned for areas with "severe" or "critical" soil surface factors (SSF) and in areas with "moderate" and "slight" SSF and "high" erosion hazards, will be subject to special mitigative measures to offset impacts identified at the plan of operations stage.
8. Whenever possible, avoid surface occupancy on riparian zones.
9. Within crucial desert tortoise habitat, require mineral operators to identify and avoid, whenever possible, actual tortoise use areas (i.e., denning sites) prior to initiation of operations.
10. Within crucial desert tortoise habitat, require mineral operators to engage qualified wildlife biologists to search for and remove desert tortoises from operations sites prior to initiation of operations.
11. Avoid surface occupancy on relic stands of Douglas fir, ponderosa pine, bristlecone pine, and other relic plant communities.
12. In cooperation with Nevada Division of State Parks, make mineral leasing decisions for Valley of Fire State Park by mapping resource occurrence, as in the Red Rock Canyon Recreation Lands Oil and Gas Environmental Assessment, and using that document's impact matrix to develop lease stipulations.

Support Needs:

All resource activities, Nevada Division of State Parks, Nevada Department of Wildlife, holders of surface estate rights.

Alternatives Considered:

1. Close crucial areas to mineral leasing.
2. No surface occupancy in desert tortoise crucial habitat.

Decision

Modify the MFP II recommendation to read as follows:

Continue to Manage the Federally owned mineral estate in Clark County as open to mineral location, sales, and leases. Locatable mineral activities will be authorized pursuant to 43 CFR Group 3800; saleable mineral activities will be authorized pursuant to 43 CFR Group 3600; and leaseable mineral activities will be authorized pursuant to 43 CFR Groups 3100, 3200, and 3500 under, but not limited to, the following guidelines:

1. Identify in issued mineral leases that impacts to crucial bighorn sheep and desert tortoise habitat will be subject to mitigative measures during the plan of operations stage.
2. Whenever possible, avoid surface disturbing activities under proposed mining plans of operations in bighorn sheep crucial summer habitat.
3. Roads created by mineral activities will be referred to the Area Manager for disposition prior to the end of the mineral activity.
4. Identify in mineral leases issued in the floodplain of the Virgin River, that impacts to critical habitat of threatened or endangered species will be subject to mitigative measures during the plan of operations stage as identified through "Section 7" consultation.
5. Identify in mineral leases issued for those washes identified on the Nongame Bird URA III Overlay, that impacts to those washes will be subject to mitigative measures during the plan of operations stage.
6. Whenever possible, avoid surface occupancy on or within 1/4 mile of developed or designated recreational facilities.

Reason: There are opportunities under the CFR. Minerals Management regulations and during the review of mining plans of operations to offset the undesirable impacts to other resources from the mineral activities.

One comment stated objection to BLM's allowing any mineral entry or mineral leasing on public lands in Clark County. Laws, however, forbid BLM from interfering in these activities, and, in fact, encourage mineral development. Therefore, the language of the decision cannot reflect this concern.

One commentator requested that rare, endangered or threatened fish species be mentioned along with desert tortoise and bighorn sheep in respect to mitigation measures concerning mining activity. This concern does not need to be addressed in the decision because the Endangered Species Act Amendment of 1982 adequately protects those species of fish.

Two comments stated that relocating tortoises to other areas would not be beneficial, and it would be likely the tortoises would not survive. It is agreed that moving tortoises to new areas would not necessarily be beneficial. The MFP decision now reflects other types of mitigation. Oil, gas, and geothermal leasing decisions for Valley of Fire State Park were accomplished in FY82 under the procedures recommended. Therefore, point 12 (MFP II) has been eliminated.

(Minerals 1.1 continued)

7. Identify in issued mineral leases, that in areas with "severe" or "critical" soil surface factors (SSF) and in areas with "moderate" and "slight" SSF and "high" erosion hazards, operations will be subject to special mitigative measures to offset impacts identified at the plan of operations stage.
8. Whenever possible, avoid surface occupancy on riparian zones.
9. Within crucial desert tortoise habitat, require mineral operators to engage qualified wildlife biologists to search for desert tortoises at operation sites prior to initiation of operations. Should tortoises be found, applicable mitigation (e.g., avoidance of tortoise burrows or habitat, or transplanting tortoises to adjacent habitat if feasible and beneficial) will be accomplished.
10. Avoid surface occupancy on relic stands of Douglas fir, ponderosa pine, bristlecone pine, and other relic plant communities.
11. Wilderness Interim Management Policy and Wilderness Management Policy Guidelines.

Step 3

Recommendation 1.3:

Maintain four sand and gravel pits in the Las Vegas Valley for mineral material sales to the public, one in each quadrant of the Valley. Complete establishment by FY84. Evaluate every two years to determine if residential development encroachment warrants relocation.

Rationale:

The sand and gravel pits provide valuable services to the public. Maintenance of four pits will insure ready availability of such materials and minimize the workload on the staff geologists in responding to individual requests for salable mineral materials.

Support Needs:

Appraisal, survey.

Multiple Use Analysis

The 1980 census shows metropolitan Las Vegas as the second-fastest growing city in the U.S. Rapid growth requires adequate aggregate to support the construction of new facilities. Current private sources are being depleted and future construction will depend heavily upon BLM lands as sources of supply. It is desirable to minimize transportation costs, therefore, sites should be dispersed throughout the Las Vegas Valley. This urban expansion requires periodic review and possible site relocation to avoid unnecessary conflict with population expansion.

This recommendation conflicts with Public Law 96-586 (Santini-Burton Bill) which identifies land to be sold within specific boundaries. It also conflicts with Lands 1.1 which calls for disposal of most lands within Las Vegas Valley.

Multiple Use Recommendation:

Modify the recommendation to exclude all sites within the boundaries established by Public Law 96-586.

Reason:

This practice is within the guidelines and objectives of good management to provide service to the public at minimal cost. It addresses the intent of Public Law 96-586.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Modify the MFP II recommendation to read as follows:

By FY84, establish and maintain not less than four community sand and gravel pits in the Las Vegas Valley

Reason:

Maintenance of at least four community pits will ensure ready availability of such materials. Denial of all future requests for sand and gravel leases and sales contracts will minimize the

REPORT OF THE
COMMISSIONER OF THE
BUREAU OF LAND MANAGEMENT

MANAGEMENT PLAN FOR THE
SAGEHEN VALLEY

Prepared by the
Bureau of Land Management

Introduction

The Sagehen Valley is a beautiful area of land in the State of Nevada. It is a valley of great beauty and interest, and it is one of the most important areas of land in the State. The valley is a part of the Great Basin, and it is a part of the Sagehen River system. The valley is a part of the Sagehen River system, and it is a part of the Sagehen River system. The valley is a part of the Sagehen River system, and it is a part of the Sagehen River system.

Objectives

The objectives of the management plan are to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley.

Policy Statement

The policy statement of the management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The policy statement is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The policy statement is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley.

The management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley.

Management Plan

The management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley.

Conclusion

The conclusion of the management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The conclusion of the management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The conclusion of the management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley.

Appendix

The appendix of the management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The appendix of the management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The appendix of the management plan is to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley.

References

The references of the management plan are to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The references of the management plan are to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley. The references of the management plan are to protect the natural resources of the valley, to provide for the recreation of the people, and to provide for the economic development of the valley.

(Minerals 1.3 continued)

and its immediate vicinity for sand and gravel sales to the public, one in each quadrant. Pits should be located outside the boundaries of PL 95-586. Award no new sand and gravel leases or sales contracts, either competitive or noncompetitive, and renew no existing leases or contracts upon their expiration. Evaluate the area annually to determine if residential development encroachment warrants relocation of community pit sites, free use permit sites, and material site rights-or-way.

workload on staff geologists in responding to individual requests for sand and gravel and reduce the proliferation of material sites. Annual evaluation of all sites will reduce the residential development encroachment problems, along with the corresponding land use conflicts. One commentator envisioned a conflict between PL 95-586 and material sites. No new sites will be established within PL 95-586 boundaries, and present sites will not be renewed upon their expiration.

Another comment questioned the policy of maintaining only four community pits within the Las Vegas Valley. Not less than four pits will be maintained, and an ample number will be made available in appropriate locations in order to satisfy the needs of private industry in the Las Vegas area.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Minerals
Overlay Reference	Step 1 Step 3

Recommendation 1.4:

By FY84, identify potential sand and gravel pits near each rural community in Clark County which does not currently have one.

Support Needs:

None

Rationale:

Growth of these communities will likely lead to a request for sales of mineral materials. Preliminary work would allow the District to respond quickly to public demand.

Multiple Use Analysis

Many rural communities depend heavily upon BLM lands as a source for sand and gravel. It is imperative to the growth and development of these communities that community pits be identified. The sites need to be located such that transportation costs are minimized. Prime sources must be identified to eliminate potential conflicts with DLE and R&PP applications, and private and governmental sales. Maximum coordination with community and Clark County entities will insure BLM actions and planning meet the needs and objectives of local planning.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

This meets the goals and objectives of good public land management for maximizing multiple use.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Modify the MFP II recommendation to read as follows:
Establish community sand and gravel pits near each rural community in Clark County which does not currently have one.

Reason:

Because growth of these communities will likely lead to requests for sales of mineral materials, establishment of rather than identification of community pits will allow a much quicker response time to meet the demands of the public for sand and gravel.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Forestry
Objective Number
F-1

Objective 1.0:

Manage the existing public lands in Clark County to partially meet the demand of the Las Vegas metropolitan area for woodland and desert vegetative products on a sustained yield basis.

Rationale:

The increasing cost of fossil fuels has and will continue to make firewood an attractive energy source in Clark County. This public demand warrants the development and implementation of a sound woodland management program in order to meet the increasing impacts generated by the collection of firewood.

Other demands for desert flora are growing also. Increasing water costs and future loss of current supply margins will place greater emphasis on the use of water-conserving desert plants for landscaping in Las Vegas.

Multiple Use Analysis

Woodland products, particularly firewood, have had a growing demand from the Las Vegas Valley, particularly as costs have risen for fossil fuels. It is clear however, that Clark County forestry resources can only partially satisfy that demand. Thus, the "sustained yield" phrase brings the recommendation into conformance with policy found in FLMA (Sec. 102(a)(2)) and is consistent with good resource management.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

Page 1

CONFIDENTIAL

1. The purpose of this document is to provide information regarding the current status of the project and the progress made to date.

2. The project has been initiated and is currently in the planning phase. The initial objectives and goals have been established.

3. The project team has been formed and is working on the development of the project plan. The plan will outline the scope, schedule, and resources required for the project.

4. The project is expected to be completed by the end of the year. The progress made to date is satisfactory.

Conclusion

5. The project is a complex task and requires careful planning and execution. The project team is committed to ensuring the successful completion of the project.

6. The project is a high priority and will be given the necessary resources and support to ensure its success.

7. The project is a key initiative for the organization and will have a significant impact on the organization's future.

8. The project is a challenging task and will require the full commitment and effort of the project team.

9. The project is a strategic initiative and will be closely monitored and managed by the project sponsor.

10. The project is a critical path item and will be given the highest priority.

11. The project is a key deliverable and will be a major achievement for the organization.

12. The project is a high profile initiative and will be a source of pride for the organization.

13. The project is a strategic initiative and will be a key factor in the organization's success.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	
Clark County	
Activity	
Forestry	
Overlay Reference	
Step 1	Step 3

Recommendation 1.1:

Develop, during FY83-84, a greenwood cutting program on the west side of the Spring Mountains, to include designation of units on slopes of 30% or less as areas to be open for cutting during the months of June through August. First cut should be accomplished in the summer of 1984. The remaining months the area shall be closed. The area cut in one year should be seeded the following autumn.

Support Needs:

Temporary manpower, recreational staff, U.S. Forest Service coordination, Division of Administration, Public Affairs.

Rationale:

There is a strong demand for firewood from the Las Vegas community. The demand is at its seasonal low during the summer months (PAA). By allowing cutting during this time, the Bureau would distribute the workload upon Bureau staff throughout the year. Also, roads should be more passable with less damage occurring due to off-road vehicular travel.

An essential element of such a program would be an adequate crew of temporary summer workers to administer the sale, and the cutting, patrolling, signing, and cleanup elements of the program.

Such a program would benefit wildlife and livestock grazing by providing opportunities for better forage diversity.

Fence posts should also be sold under this program.

Multiple Use Analysis

(Includes Livestock Grazing 2.5 and Wildlife 1.31.)

The demand for timber products in Clark County has increased steadily over the past few years and is expected to continue to do so in light of this observed trend and economic indications (PAA). There exist a few isolated woodland areas in Clark County of which the Spring Mountains dominate in size and popularity as a recreation area. Although numerous species of trees exist in the area, only pinyon pine and juniper exist in abundance and are not protected by the State. Such species as Douglas fir, and ponderosa and bristlecone pines are considered rare and unique here and are being recommended for ACEC classification (Forestry 2.1).

Numerous methods exist for manipulating the vegetation resource to the benefit of other resource values. Recommendations for prescribed burning programs and chaining and seeding are covered under Forestry 3.1 and 3.2 and Wild Horses and Burros 2.1 and 2.2. Another method of managing the vegetation resource is through a greenwood cutting program. This method of resource management would enable the Bureau to meet increasing public demand for firewood and posts while providing a tool by which other resources might benefit.

The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act. The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act.

1. Purpose and Objectives 2. Description of the Watershed 3. Management Plan

The purpose of this plan is to provide for the protection of the watershed and the improvement of the land. The plan should also provide for the development of the watershed and the improvement of the land. The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act. The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act. The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act.

The plan should provide for the protection of the watershed and the improvement of the land. The plan should also provide for the development of the watershed and the improvement of the land. The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act. The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act. The plan should be developed in accordance with the National Forest Management Act and the National Antiquities Act.

(Forestry 1.1 continued)

Where recreation is recognized as the overriding resource value, as is the case in the Spring Mountains (Recreation 5.1), care must be taken to coordinate carefully with the recreation staff any action taken in this area. In areas designated as WSAs, the Interim Management Policy for Lands Under Wilderness Review must be adhered to (Recreation 7.1).

The benefits derived from a greenwood cutting program would be realized by many resources. Designation of greenwood cutting areas on slopes of 30% or less would greatly benefit the forage resource for livestock grazing on allotments within the Spring Mountain Range area by releasing the vegetation from dense overstories in otherwise accessible terrain. At present, only the Wheeler Wash allotment is actively being grazed on the west side of the Spring Mountains, this being the side recommended for cutting.

In order to increase the diversity of wildlife in the Spring Mountains, greenwood cutting of monotypic pinyon and juniper stands could be carried out. The diversity of wildlife habitat in the area depends to a great extent on vegetation manipulation in order to set back the trend towards climax. In an area which has been protected over the years, that by cutting selected stands of timber would benefit both wildlife and the public in terms of improved hunting. This type of program is also recommended for the McCullough and Virgin Mountain ranges (Wildlife) and will be looked into in the future, funding and manpower permitting for the development of a HMP prior to cutting.

The administration of a greenwood cutting program should be carried out by Bureau personnel for numerous reasons. By opening up cutting areas in the summer months of June through August, seasonal personnel are more readily available for use supervision. Resource values can best be maintained by following the cut with fall seeding, an optimum time for spring regrowth. The public can feasibly retrieve wood, although this is an uncomfortably hot time of the year for outside activity. This would help to alleviate the pressures caused by unrestricted use, e.g., vehicles in the recreation area, especially where fragile watershed values are of concern (Watershed 4.3). In addition, normal collection of dead and down timber would continue to be available during other months of the year.

Multiple Use Recommendation:

Develop a greenwood cutting program in pinyon and juniper areas in the Spring, Virgin, and McCullough Mountain Ranges, with priority for the Spring Mountains. Cutting areas should be identified through activity planning and serve multiple use purposes. Wood cuts should be supervised by Bureau personnel and be accomplished during the summer months when temporary help is most available. All cutting plans on the Spring Mountain

Reasons:

Multiple use benefits to recreationists, livestock, wildlife, and the public can be realized through this recommendation.

(Forestry 1.1 Continued)

Range must be coordinated with, and subordinated to, recreation plans for that area. Reseeding of a cut area will take place the autumn following the cut.

Support Needs:

As stated in MFP 1.

Alternative considered:

Allow no greenwood cutting.

Decision:

Accept the MFP II recommendation as written.

Reasons:

One comment stated that continuous maintenance is needed to reduce fire hazard in these ranges. Greenwood cutting could be used to partially reduce fire hazard.

(Footnote 1.2. continued)

These must be coordinated with the
understanding of the various groups for
that same. Following is a list of
will take place the system following
the day.

Support Group:

as stated in NTP 1.

Alternative model:

Also as described in NTP 1.

Definition:

Group 1.2. NTP II Technology as

defined.

Reason:

The concept stated that companies
interested in working in the same time
period in some form. However,
nothing could be done to provide
before this point.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Forestry

Overlay Reference

Step 1

Step 3

Recommendation 1.2:

Design and implement a system by which lands identified as suitable may be leased to local nurserymen to produce desert vegetation and/or drought-resistant and low-water-requirement vegetation.

Support Needs:

Lands program, vegetation and soils specialists.

Rationale:

Although the Las Vegas Valley currently has adequate water supplies, primarily from Colorado River water allocations, continued future growth will reduce that margin of supply to critical levels. Las Vegas currently has one of the highest per capita rates of water consumption. One reason for this is the copious amounts needed to keep lawns green during hot summer months. As future water supply margins shrink, greater emphasis will be placed on water-conserving desert landscaping. To avoid ruinous vegetation trespass, BLM should cooperate now to develop inexpensive sources of these plants.

See Lands 1.4 for multiple use analysis and recommendation.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Forestry

Overlay Reference

Step 1

Step 3

Recommendation 1.3:

Prior to initiation of rights-of-way development, mining actions, or other activities which would destroy desert or woodland vegetation, take place, the area should be opened to the public to remove vegetation that would otherwise be destroyed.

Support Needs:

Lands and Minerals programs;
advertising.

Rational:

There is a demand for desert vegetation which is sometimes satisfied by illegal harvesting or from out-of-state sources. By providing a mechanism within the Bureau for disposal of desert vegetation, the Bureau could partially fulfill the present demand and channel the impact to appropriate areas.

Multiple Use Analysis
(Includes Watershed 1.1)

Numerous requests for the acquisition of native desert vegetation and timber have been received and are expected to be forth-coming. Bureau policy allows for the disposition of vegetation products by either sale or free use (CFR 5400, 5500). The salvation of materials for landscaping, research, firewood, and construction materials is viable. In addition to aesthetic values derived from landscaping, transplanting of native vegetation has been identified as an ecological benefit to watershed on private lands (WS 1.1). Free use permits could be issued for removal of vegetation other than for commercial purposes, in cases where the vegetation would otherwise be destroyed from both desert lands and timbered areas. Sale of salvageable materials would generate revenues for the Bureau while offering an alternative source of materials to commercial interests.

Multiple Use Recommendation:

Accept as written. Coordinate the removal of native desert vegetation (yuccas and cacti) with the Nevada Division of Forestry. Develop an advertising program whereby the developer or the Bureau has the responsibility for making the public aware of upcoming sales or give-aways.

Reasons:

The salvation of vegetation materials by the public would enable the Bureau to administer a growing demand for these products while generating revenue for the Bureau in some cases.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

None

BUREAU OF LAND MANAGEMENT
MANAGEMENT PLANNING PLAN
FOR THE FOREST MANAGEMENT**

Background:
This is a report on the forest management plan for the Forest Management area. The plan is based on a survey of the area and a study of the forest resources. The plan is designed to provide for the sustainable management of the forest resources and to protect the forest from fire, insects, and diseases. The plan is based on the following assumptions: (1) The forest resources are renewable and can be managed sustainably. (2) The forest resources are a part of the national heritage and should be protected for the benefit of future generations. (3) The forest resources should be managed in a way that is consistent with the principles of sustainable development. The plan is based on the following objectives: (1) To provide for the sustainable management of the forest resources. (2) To protect the forest from fire, insects, and diseases. (3) To provide for the recreation and aesthetic enjoyment of the forest resources. The plan is based on the following management actions: (1) To conduct a forest inventory and assessment. (2) To develop a forest management plan. (3) To implement the forest management plan. (4) To monitor and evaluate the forest management plan. The plan is based on the following management actions: (1) To conduct a forest inventory and assessment. (2) To develop a forest management plan. (3) To implement the forest management plan. (4) To monitor and evaluate the forest management plan.

Management Plan:
The management plan is based on the following assumptions: (1) The forest resources are renewable and can be managed sustainably. (2) The forest resources are a part of the national heritage and should be protected for the benefit of future generations. (3) The forest resources should be managed in a way that is consistent with the principles of sustainable development. The plan is based on the following objectives: (1) To provide for the sustainable management of the forest resources. (2) To protect the forest from fire, insects, and diseases. (3) To provide for the recreation and aesthetic enjoyment of the forest resources. The plan is based on the following management actions: (1) To conduct a forest inventory and assessment. (2) To develop a forest management plan. (3) To implement the forest management plan. (4) To monitor and evaluate the forest management plan. The plan is based on the following management actions: (1) To conduct a forest inventory and assessment. (2) To develop a forest management plan. (3) To implement the forest management plan. (4) To monitor and evaluate the forest management plan.

**Multiple Use Analysis
Forest Management**

The multiple use analysis is based on the following assumptions: (1) The forest resources are renewable and can be managed sustainably. (2) The forest resources are a part of the national heritage and should be protected for the benefit of future generations. (3) The forest resources should be managed in a way that is consistent with the principles of sustainable development. The analysis is based on the following objectives: (1) To provide for the sustainable management of the forest resources. (2) To protect the forest from fire, insects, and diseases. (3) To provide for the recreation and aesthetic enjoyment of the forest resources. The analysis is based on the following management actions: (1) To conduct a forest inventory and assessment. (2) To develop a forest management plan. (3) To implement the forest management plan. (4) To monitor and evaluate the forest management plan. The analysis is based on the following management actions: (1) To conduct a forest inventory and assessment. (2) To develop a forest management plan. (3) To implement the forest management plan. (4) To monitor and evaluate the forest management plan.

The multiple use analysis is based on the following assumptions: (1) The forest resources are renewable and can be managed sustainably. (2) The forest resources are a part of the national heritage and should be protected for the benefit of future generations. The considerations are based on the following management actions: (1) To conduct a forest inventory and assessment. (2) To develop a forest management plan. (3) To implement the forest management plan. (4) To monitor and evaluate the forest management plan.

**Summary
Forest Management**

(Forestry 1.3 continued)

Decision:

Accept the MFP II recommendation as written.

Question 1.1 (continued)

Answer:

As the number of trials increases, the sample mean approaches the population mean.

QED

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County

Activity
Forestry

Objective Number
F-2

Objective 2.0:

Protect, preserve, and regenerate the ecological niches of Douglas Fir (Pseudotsuga menziesii), Ponderosa Pine (Pinus ponderosa), Bristlecone Pine (Pinus aristata), and other rare or unique plant communities.

Rationale:

The topography and climate of the Clark County area have resulted in the isolated development of some plant communities. In some cases, geographic evolution has left remnant populations of plants which, today in Clark County, are far removed from their normal range or distribution. Therefore, hybrids of these species have developed that are unique to the area. It is recommended that these "pockets" be preserved for their uniqueness, for future study by the academic community, and as a seed source.

Multiple Use Analysis

The objective embodies an important protective concern for management of such relic stands of trees. It is consistent with guidance in FLPMA (Sec. 102 (a) (8)).

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written

Reasons:

One comment suggested that Joshua trees, Smoke trees (near Ft. Mohave), barrel cactus, and all threatened and endangered plant species should be included in the objective. Joshua trees and barrel cactus, which are widespread, do not fit the objective of managing limited, isolated populations of forest species uncommon in Clark County. Threatened and endangered plants and Smoke trees (if any even exist on BLM-administered lands) do fit the intent of the objective, however, and are adequately covered by the phrase: "and other rare or unique plant communities."

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Forestry

Overlay Reference

Step 1

Step 3

Recommendation 2.1:

Designate areas of Douglas Fir, Ponderosa Pine, Bristlecone Pine, and other unique plant communities as Areas of Critical Environmental Concern (ACEC). Removal of any individual trees or plants would be justifiable only as a means of protection of these species, i.e., removal of diseased or insect-infested trees.

Rationale:

The rarity of the occurrence of Pseudotsuga menziesii and Pinus ponderosa stands in Southern Nevada warrants the preservation of these stands. An ACEC designation would provide the necessary management guidance to give the proper level of protection.

Support Needs:

Federal Register Notice.

Multiple Use Analysis

(Includes Wildlife 1.37 and Cultural Resources 1.6)

An "Area of Critical Environmental Concern" (ACEC) is defined as an area within the public lands where special management attention is required to protect and prevent irreparable damage to a specific resource value, or to protect life and safety from natural hazards (Areas of Critical Environmental Concern Policy and Procedures Guidelines, USDI, BLM, June, 1980, Sec. 103 (a)). Numerous areas within Clark County have been identified for nomination as an ACEC, the basis of which is for the protection of a natural resource. Included are:

<u>Area</u>	<u>Reason for Identification As An ACEC</u>	<u>Recommendation</u>
To include stands of Douglas Fir, Ponderosa Pine, Bristlecone Pine, and other unique plant communities	Rarity of occurrence. Stands of unique timber species exist in the higher altitudes of the Virgin, Spring, and lesser mtn. ranges. Unique cacti communities exist in various areas throughout Clark County - (URA 3, 4)	Forestry 2.1

Note: Attach additional sheets, if needed

(Instructions on reverse)

(Forestry 2.1 continued)

Virgin River

Unique as a riparian zone, this area has been identified as critical habitat for the Woundfin, an endangered fish species (Federal). Concerned groups include local, State, & Federal agencies (PAA).

Wildlife 2.2

Areas of Bighorn summer habitat, lambing habitat, and migration routes (listed by priority) in the following ranges:

Arrow Canyon
McCullough Mtns.
Highland Range
Red Rock/LaMadre
Muddy Mtns.
Bird Spring
Eldorado
Virgin Mtns.
New York/Castle/
Piute

To safeguard and perpetuate this species and its habitat.

Wildlife 1.37

Areas of desert-tortoise crucial habitat included in the following:

Piute Valley
Goodsprings
Moapa
Arrow Canyon
California Wash

To protect and intensively manage desert tortoise populations. Concern for this species is at least regional and may be national (PAA).

Wildlife 3.7

High probability areas for archeological finds (see MFP 3 overlay for locations).

High potential for fragile archeological resources.

Cultural Resources
1.6

Old Spanish Trail

Historical values and preservation.

Cultural Resources
1.6

Continued from page 1

1.0 Historical values and preservation	Historical values and preservation	1.0 Historical values and preservation
1.0 Historical values and preservation	1.0 Historical values and preservation	1.0 Historical values and preservation
1.0 Historical values and preservation	1.0 Historical values and preservation	1.0 Historical values and preservation
1.0 Historical values and preservation	1.0 Historical values and preservation	1.0 Historical values and preservation
1.0 Historical values and preservation	1.0 Historical values and preservation	1.0 Historical values and preservation

(Forestry 2.1 continued)

There are a number of activities which could conflict with the resources noted in these recommendations. All would be surface disturbing activities: mineral operations, construction, off-road vehicle use, utility rights-of-way, etc. The nominated areas have resource values of apparent high value that warrant protection. Whether the ACEC designation is appropriate can only be determined through the ACEC identification and designation process. It is policy within the State of Nevada that resources that can be adequately managed and protected through existing devices, such as activity or management planning, should not be considered under the ACEC process

Multiple Use Recommendation:

Modify the recommendation as follows:
Accept the listed areas as nominees for the ACEC identification and designation process except for the wildlife habitat areas (bighorn sheep and desert tortoise habitats and the Virgin River Critical habitat of the woundfin). Undertake the process with priority to relic stands of trees, cultural resource sites.

Reason:

The areas nominated, from a variety of different sources, should be examined to determine if ACEC designation is needed for resource protection. The bighorn sheep and desert tortoise habitats can be adequately managed through HMPs and the "Section 7" consultation provides special emphasis for endangered species.

Support Needs:

All activities, funding of ACEC process.

Alternatives Considered:

1. Do not nominate.
2. Evaluate as Natural Areas.

Decision:

Consider the following listed areas as possible nominees for the future management actions such as, research natural areas, national historical register nominees, ACECS, etc.

Area To include
stands of Douglas
Fir, Ponderosa Pine,
Bristlecone Pine, and
unique cacti plant
communities.

Reason for
Consideration
Rarity of occurrence.
Stands of unique
timber species exist
in the higher
altitudes of the
Virgin, Spring, and
lesser Mtn. ranges.
Unique cacti
communities exist in
various areas
throughout Clark
County - (URA 3, 4)

Reasons:

One comment stated that eliminating wildlife habitat areas (MFP II recommendation) as nominees for ACEC designation is not consistent with the definition of ACEC. Wildlife habitat areas were dropped as a result of the State Director's decision - Instruction Memorandum NV-81-363- that states: "Future planning documents will not propose the designation of wildlife areas...as ACECs where there are other management options available."

High probability
areas for
archeological finds
(see MFP 3 overlay
for locations).
Old Spanish Trail

High potential for
fragile archeological
resources.
Historical values and
preservation.

(Forestry 2.1 continued)

Gypsum Cave	High paleontological, cultural, and ethnohistorical values.	One comment suggested that Gypsum Cave needs added protection because it possesses national significance. It has, therefore, been added to the listing. Gypsum Cave was the site of archaeological investigations in the 1920s that defined the Archaic Era occupation of southern Nevada. Also, recent ethnographic research has revealed that Gypsum Cave was used by Paiute Shamans as a spot where one "acquired power" from the spirit world. Another comment suggested adding Mojave (Camel) Trail and Arrowhead Trail to the ACEC nominee list. Mojave Trail has been thoroughly documented in California and Nevada. The Needles Resource Area has conducted a tremendous amount of work through Dennis Casebier, president of the Friends of the Mojave Trail group. They have marked the trail and established a trailguide for travelers that covers the southern Nevada portion of the trail. Dr. Casebier has written several books on the history of the trail and sites associated with the trail, providing its historical value and worthiness of inclusion as an ACEC
Mojave (Camel) Trail	High historical significance.	
Virgin River Floodplain (see attached map).	Critical habitat for endangered species (Virgin River Woundfin):	

or listing on the National Historic Trails Register. This trail has, therefore, been added to the nomination list. The Arrowhead Trail has not been added to the list because it is felt that ORV and other activity had degraded this trail sufficiently that little integrity is left to it. This makes its protection of little value. WSAs that are not designated by Congress for Wilderness Area status because of higher valuation of other multiple uses, nonetheless may have significant natural and recreational values that benefit through ACEC designation.

The Virgin River is the longest contiguous area of habitat of the Woundfin within Clark County, administered by BLM. It has been identified as probable critical habitat for the federally listed endangered fish. Activities in the flood plain could effect the fish's habitat. Because of BLM's responsibilities under the Endangered Species Act and Woundfin Recovery Plan, it was felt the Virgin River should be retained for consideration as an ACEC.

Step 1 Step 3

Recommendation 2.2:

Develop an interpretive signing program to explain why unique plant communities (Douglas fir, ponderosa pine, bristlecone pine, etc.) require protection.

Support Needs:

Interpretive Specialists, Public Affairs.

Rationale:

The remoteness of the unique communities makes constant patrol impractical. A sign program would serve the purpose of a constant reminder to would-be cutters of the need to preserve the selected stands and the reasons why.

Multiple Use Analysis

No conflicts were identified with this recommendation. It is complemented by Recreation 1.4, which urges protection of several desert vegetation sites. Forestry 2.1 also calls for these areas to be considered as ACECs. Signs, on the other hand, could be undesirable marks of man in areas which are essentially natural.

Multiple Use Recommendation:

Modify the recommendation as follows:
Determine the need for interpretive signing programs during ACEC consideration.

Support Needs:

ACEC Process.

Reason:

Interpretive signing is one of many protective actions available. The full range of protection ought to be considered before making a commitment to one or another.

Alternative Considered:

Proceed with the recommendation.

Decision:

Accept the MFP II recommendation as written

Step 1

Step 3

Recommendation 2.3:

Develop and implement, by FY84, a priority system by which wildfires shall be suppressed in all areas containing Douglas fir, ponderosa pine, and bristlecone pine.

Support Needs:

Fire Management Officer.

Rationale:

Priority of fire suppression may be given to the fire of the largest size. Unfortunately, this could result in a 50-acre fire in a pinyon-juniper stand taking precedence over a 5-acre fire in a bristlecone pine stand. The relative value should be higher on the bristlecone pine because of the uniqueness of this species, than on that of rather commonly occurring pinyon-juniper stands.

See Fire 1.4 for multiple use analysis and recommendation.

Recommendation 2.4:

Develop and implement, by FY87, a prescribed burning program for the purpose of slash reduction and/or regeneration enhancement of species such as Douglas fir.

Support Needs:

Fire Management Officer; Wildlife and Range Specialists; Fire Crew.

Rationale:

The relatively low cost of burning allows for an inexpensive way of regenerating and/or reducing the fire hazard in woodland stands by removing vegetation debris and small shrubs in a forest or woodland understory. Otherwise, this material could encourage wildfire spread, doing extensive damage to such relic stands.

In addition, Douglas fir requires fire to scarify its seeds, burn off humus layer in the soil, and perform other functions relevant to its reproductive cycle. Prescribed burns would thus aid the density of these stands.

See Fire 2.1 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County

Activity
Forestry

Objective Number
F-3

Objective 3.0:

Use fire as a major management tool to accomplish vegetation manipulation to improve woodland quality on public lands in Clark County.

Rationale:

Fire is a natural part of the ecology and, in areas where other resource values or private property are not at risk, it provides an extremely cost-effective management tool. Many vegetation communities, in fact, require periodic fire as an aid to maintaining or increasing their vitality. Fire-caused vegetation manipulation can also provide great benefits to wildlife habitat.

Multiple Use Analysis

This recommendation reflects incorporation of natural processes into management actions to achieve multiple-use resource objectives. While it is supported by Bureau policy as a cost-effective management tool, concern remains high for the safe and reasonable use of fire.

Multiple Use Recommendation:

Accept the objective as written with the addition of the following sentence: "Assure that, at a minimum, chances for a controlled fire to become a wildfire are very low."

Decision:

Accept the objective, as modified in MFP II, to read:

Use fire as a major management tool to accomplish vegetation manipulation to improve woodland quality on public lands in Clark County. Assure that, at a minimum, chances for a controlled fire to become a wildfire are very low.

Step 1

Step 3

Recommendation 3.4:

Develop by FY85 a programmatic plan for fire rehabilitation on public lands throughout Clark County with priority for the Spring Mountain Range and the South McCullough Range.

Support Needs:

All programs.

Rationale:

A programmatic plan would insure rapid rehabilitation action on fire-caused vegetation damage, particularly in the priority areas. This could prevent subsequent significant damage to such values as forestry, watershed, VRM, recreation, and wildlife habitat.

Multiple Use Analysis

(Includes Forestry 3.5, Fire 1.10, and Watershed 4.1 and 4.3)

Numerous resource values are at stake once a fire burns through an area. Emergency fire funds (4630) are available for rehabilitation on lands damaged by fire. In order to best utilize these funds and to expedite the rehabilitation process in trying to prevent significant damage to resource values, i.e., watershed (Watershed 4.1), visual, recreation, and wildlife habitat (Forestry 3.4), a comprehensive plan should be developed.

A programmatic Environmental Assessment Record (EAR) could be used for reference and guidelines in the development of a general fire rehabilitation plan in Clark County. Special consideration should be given to rehabilitation in the Spring and Southern McCullough Mountain Ranges (Forestry 3.4). A contractual agreement with the Nevada Division of Forestry (NDF) would guarantee that nursery stock for planting be made immediately available following a fire (Forestry 3.5). A memo EA would be required to analyze site-specific impacts and to recommend mitigation on a specific fire-damaged area.

Multiple Use Recommendation:

Accept recommendations as written. Conclude the contractual agreement with NDF by FY85 to coincide with completion of the programmatic rehabilitation plan.

Reason

By following this recommendation, fire rehabilitation procedures will be expedited and post-fire damage to resources will be minimized.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Accept MFP II recommendation as written.

Reasons:

Step 1 Step 3

Recommendation 3.5:

Enter into a contractual agreement with the Nevada Division of Forestry (NDF) to obtain nursery stock to be used in the rehabilitation of areas which are destroyed or altered by fire.

Support Needs:

Division of Administration, NSO
Contract Officer.

Rationale:

The fire rehabilitation manual allows for the use of fire funds for the rehabilitation of fire damaged areas where deemed feasible and necessary. This requires that planting stock be immediately available. The Bureau has neither the personnel nor the budget with which to operate a nursery. Presently, the Nevada Division of Forestry does operate a nursery in the Las Vegas vicinity. A contract in which the Bureau would buy planting stock from NDF would allow for immediate rehabilitation of areas which would otherwise have to rehabilitate naturally, sometimes with an invading species, or no regeneration at all.

See Forestry 3.4 for multiple use analysis and recommendation.

Note: Attach additional sheets, if needed

(Instructions on reverse)

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)	Clark County
Activity	Fire
Objective Number	F-1

Objective 1.0:

Prevent degradation of natural resources and destruction of structural improvements, both on public lands and on private lands adjacent to public lands, by suppressing wildfires on public lands.

Rationale:

Currently, 60 to 70 wildfires (unplanned fires) occur on public lands each year. These consume 150 to 1,700 acres per year. By major causes, 29% of wildfires have been started by lightning and 71% man-related.

The use of public lands by the large Southern Nevada population dictates a high value-at-risk classification on many areas of public lands within Clark County. Hot, dry temperatures characteristic of the desert environment lure many people to the high, mountainous areas, where cooler temperatures and unique vegetation provide scenic and recreational activity.

Wildfires can leave public lands and enter adjacent private property, threatening, among other things, valuable structures. The urban-wildland interface problem occurs throughout Clark County and is spreading rapidly. Population growth and the associated structures are occurring throughout the Spring Mountain Range. Examples are found in Mountain Springs, Lovell Canyon, and Trout Canyon.

Wildfires would be engaged on private lands only if there were a clear and immediate danger of the fire spreading to public lands.

Unique vegetation types are found throughout Clark County. Species which are common in other areas are unique to this desert area. These vegetation types range from pinyon-juniper to ponderosa pine. The common desert species found in Clark County play an important role as habitat for wildlife and in maintaining good watershed conditions. Loss of this habitat and ground cover, particularly when climatic conditions indicate slow natural recovery, can have severe negative effects on the land's productivity.

Multiple Use Analysis

The objective is consistent with Bureau policy.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

Step 1	Step 3

Recommendation 1.1:

Develop an effective fire prevention and presuppression program. Place prevention signs on all major access roads.

Consider the following elements:

A.) Develop a fire prevention sign plan which would include a catalog of all available fire prevention signs and sites where these signs are to be placed within Clark County.

B.) Develop fire prevention display for the Red Rock Visitor Center. Work cooperatively with the Red Rock Visitor Center interpretive staff, to develop a display and a slide-tape presentation concerning fire prevention.

C.) Establish a fire prevention contact reference guide involving newspapers, radio stations, television stations, exhibitions, fairs, and other media outlets, for the purposes of promoting fire prevention and the fire program.

Support Needs:

Nevada State Office, Branch Fire Management; all interagency cooperators; all Las Vegas District Division Chiefs and Resource Area Managers.

Rationale:

Man-caused fires account for 71% of the fire workload in Clark County. This tends to force the fire program into a "react posture." By reducing the number and size of man-caused fires, the fire program can more efficiently support management activities.

Multiple Use Analysis

A majority of the fire workload in Clark County results from the careless actions of people. This problem will grow with the increase in population and recreation on BLM managed lands. Fire prevention and presuppression are key elements in BLM's continuing effort to reduce and control fires. The savings from fire prevention can be substantial and would allow the use of

(Fire 1.1 continued)

firefighting resources in other areas. The need to develop and implement a fire prevention and presuppression program to protect BLM resources, especially recreation activities, is supported by Forestry 2.1, and Recreation 1.6, 4.5, and 5.1. The Mack Canyon Fire, 1981, is an example of a man-caused fire that could have been prevented with substantial savings to BLM.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

This action is good management. It can decrease loss from fire for both private and government sectors. The projected savings is substantial.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Accept the recommendation as written.

Reason:

One comment was made suggesting that BLM develop a fire watch program. Fire watch methods currently used include: a lightning detection system, fire prevention patrols, interagency cooperative agreements, routine and frequent fire prevention aerial patrols by BLM, plus cooperation with commercial airline pilots.

Name (MFP)
Clark County

Activity
Fire

Overlay Reference
Step 1 Step 3

Recommendation 1.2:

Develop a comprehensive fire pre-attack plan by FY83 for Clark County, incorporating information as described in the Clark County URA -Fire Management .37.

The following units need to be pre-attack inventoried by priority, according to the Spring Mountain Interagency Agreement. Those areas with an asterisk have urban/wildland interface problems.

1. E-3 LaMadre
2. E-5 Deer Creek*
3. E-6 Lucky Strike Canyon
4. E-10 Wallace Canyon*
5. E-11 Mt. Stirling
6. E-12 Trout Canyon*
7. E-15 Bird Springs
8. E-16 Table Mountain*
9. E-17 Pahrump Valley*
10. V-1 McCullough Range
11. V-3 Laughlin*
12. V-4 Searchlight*
13. V-5 Nelson*
14. V-6 Boulder City*
15. V-7 Frenchman Mountains*
16. V-10 Virgin Mountains*
17. V-9 North Muddy Mountains
18. V-2 Piute Malley
19. V-8 Muddy Mountains
20. M-1 Mormon Mountains
21. M-2 Meadow Valley Mountains
22. M-3 Arrow Canyon Range
23. T-1 Tonopah Highway Roadside*

Support Needs:

Nevada State Office, Branch Fire Management; District Office, Division of Operations, Division of Resources, Resource Area Specialists, Fire Management Section.

Rationale:

The pre-attack system would incorporate all factors that are important to effectively dispatch a predetermined, appropriate, and effective allocation of manpower and equipment to a reported fire, based on known and documented values-at-risk. The system can justify sending less units to a fire area with low values-at-risk or to an area with low spread potential, such as a dry lake area. Conversely, the system would cause more manpower and equipment to be dispatched to a high value-at-risk area.

The pre-attack planning system encourages the most cost-effective allocation of manpower and equipment to a reported fire, based on known and documented values-at-risk.

(Fire 1.2 continued)

Multiple Use Analysis
(Includes Watershed 4.2)

The key to a timely and effective response to a wildfire is a pre-attack plan. It must identify the values-at-risk and other critical resource issues (see Fire 1.4 and 1.6, Recreation 4.5, 5.1, and 7.1, Cultural Resources 1.7, Lands 3.2, and Watershed 4.2). It must delineate the suppression techniques and equipment that will address the sensitive needs of the site. It must be accessible to the Fire Boss, Resource Manager, and others from the onset of the fire to its complete suppression. An adequate initial attack can prevent both the spread of fire and unnecessary resource damage.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

This meets the goals and objectives of public land management for maximal benefit and the prevention of loss and unnecessary expense.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Accept the recommendation as written, except delete the requirement for completion by FY83.

Reason:

MFP will only be approved by FY83.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Fire
Overlay Reference	
Step 1	Step 3

Recommendation 1.3:

Develop a Fire Detection Plan for Clark County by FY83 that includes aerial reconnaissance flight patterns, a directory of cooperative fire detection agencies, a directory of available reconnaissance aircraft, and a procedural guide to the implementation of the detection forces.

Rationale:

To effectively reduce District detection costs by establishing a system of cooperators throughout the planning unit, a detection plan is needed. It would also allow rapid deployment of closest suppression forces.

Support Needs:

All local fire cooperators, Nevada State Office, all District personnel.

Multiple Use Analysis

One of the most effective aids to fire suppression is early detection. A Fire Detection Plan that identifies fires while they are small and have potential for minimal damage is a very effective system for reducing costs to BLM and all resources. An effective system will benefit everyone.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

This meets the goals and objectives of public land management and resource protection.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Accept the recommendation as written, except delete the requirement for FY83 completion.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County
Activity
Fire
Overlay Reference
Step 1 Step 3

Recommendation 1.4:

Develop, within two years following the MFP-3 decision, a Fire Management Plan that incorporates all pertinent decisions and recommendations from adjoining fire management plans. Update the Values-at-Risk Overlay in order to include this information into the pre-attack plans, particularly so as to justify prepositioning equipment in key areas.

Priority should be given to:

1. Red Rock Canyon Recreation Lands
2. Spring Mountain Range

Support Needs:

All District resource program activities.

Rationale:

The Bureau planning system identifies the resource values (value-at-risk) by activity and area of concern. These same values and concerns should be reflected in the fire management program.

Many of the actions that the fire program may take have the potential to either enhance or destroy the resource values.

The fire management program must support and be supported by the resource planning recommendations.

Multiple Use Analysis

(Includes Forestry 2.3, Fire 1.6, Recreation 4.5, and Cultural Resources 1.7)

A Fire Management Plan would incorporate all the fire management plans (see Fire 1.1, 1.2, and 1.3). The fire prevention and presuppression plan (Fire 1.1) will minimize the number of wildfires by reducing the man-caused fires. The Fire Pre-Attack Plan (Fire 1.2) will identify the manpower and staff for initial attack, to insure the efficient suppression of the fire. Effective reaction by the fire crew will prevent the spread and enlargement of the fire. The Fire Detection Plan (Fire 1.3) will provide prior warning and an early detection system to facilitate the suppression of a fire before it becomes a major problem. The Fire Management Plan will address the needs, concerns, and limitations on a site-by-site basis. Some sites will be identified as high priority because of the value-at-risk. These sites have high property values such as communication facilities (Lands 3.2), areas containing Douglas fir, ponderosa pine, and bristlecone pine (Forestry 2.3), historical and archeological sites (Cultural Resources 1.7), prime recreational areas (Recreation 4.5 and 5.1), and areas with urban/wildlife interface. They need special planning and immediate action in the event of fire to prevent its spread. Other areas have unique features or resources that require special suppression techniques, such as historical and archeological sites (Recreation 7.1 and Cultural Resources 1.7), and recreational sites (Recreation 5.1). These sites may require the use of non-mechanized or specialized fire suppression techniques and equipment to prevent unnecessary damage to the resource. (The PAA identifies the Spring Mountains and the Red Rock Canyon Recreation Lands as areas having high recreation values and usage, including

BUREAU OF LAND MANAGEMENT
MANAGEMENT PLAN
MOUNTAIN PEAKS NATIONAL MONUMENT

Area	1,000,000
Acres	1,000,000
Section	1,000,000
Page	1

Background
The Bureau of Land Management (BLM) is the lead agency for the management of the Mountain Peaks National Monument. The monument is located in the state of New Mexico and contains a large area of public land. The BLM is responsible for the management of the monument and for the protection of the natural resources. The monument is a significant area of public land and is a valuable resource for the state of New Mexico. The BLM is committed to the management of the monument and to the protection of the natural resources. The monument is a significant area of public land and is a valuable resource for the state of New Mexico. The BLM is committed to the management of the monument and to the protection of the natural resources.

Management Plan
The management plan for the Mountain Peaks National Monument is a document that describes the BLM's management strategy for the monument. The plan is based on the BLM's mission and on the values of the monument. The plan describes the BLM's management strategy for the monument and for the protection of the natural resources. The plan is a key document in the BLM's management of the monument and is a valuable resource for the state of New Mexico. The BLM is committed to the management of the monument and to the protection of the natural resources.

Objectives
The objectives of the management plan for the Mountain Peaks National Monument are to protect the natural resources of the monument, to provide for the enjoyment of the monument by the public, and to provide for the management of the monument in a way that is consistent with the BLM's mission and the values of the monument. The objectives are to protect the natural resources of the monument, to provide for the enjoyment of the monument by the public, and to provide for the management of the monument in a way that is consistent with the BLM's mission and the values of the monument. The objectives are to protect the natural resources of the monument, to provide for the enjoyment of the monument by the public, and to provide for the management of the monument in a way that is consistent with the BLM's mission and the values of the monument.

(Fire 1.4 continued)

some private and State property.) The development of homes and facilities in urban-wildland interface areas requires immediate suppression to minimize loss of life and property. These modifications of the Pre-Attack Plan (Fire 1.2) and utilization of equipment (Fire 1.6) will be source and reference documents to the fire boss, resource advisor, and others when a wildfire is discovered. Other areas will be identified where fire may benefit the range user as a means of vegetation manipulation (Fire 2.1, Livestock 1.10, Wild Horse and Burro 2.1, and Wildlife 1.3). The identification and mapping of all critical concerns will provide the basis for prepositioning equipment and personnel in key areas. The Fire Management Plan will address all conflicts and needs on a site-by-site basis and the techniques and equipment that will be utilized.

Multiple Use Recommendation:

Develop, by FY85, a fire management plan to combat wildland fires on public lands in Clark County.

Suppression priorities are as follows:

1. Red Rock Canyon Recreation Lands
2. Mountain Springs/Mt. Potosi Area
3. Kyle Canyon
4. Lee Canyon
5. Remaining Spring Mountain Range with priority to recreation areas
6. Other areas of urban-wildland interface
7. Virgin Mountains - relic stands of trees
8. South McCullough Mountains-unique vegetation areas

Provide fire protection to the following historical properties, either in conjunction with areas listed above, if they are located there, or otherwise as priority 9: Mt. Potosi Cabin, Wheeler Pass Charcoal Kilns, Searchlight Mining District, Virgin Mtn. Cabin, Goodsprings Mining District, Mt. Potosi Mines, Trout Canyon Cabin, South McCullough Wickiup, Crescent Peak Mining District.

Use of fire suppression equipment and techniques to their maximum design capabilities will be modified as necessary to assure no greater damage occurs to resource values from the suppression effort than could occur from the fire. On all fires in the priority areas, a resource advisor will be requested and assigned.

Reason:

A prepared management plan will enhance fire suppression efforts, and consequently reduce loss of property and resource values. Resource advisors are key persons on the fire suppression staff to assure the effort is cost-effective and important resource values are protected.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

OFFICE NOTES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

Date: 10/2/74	Class: 1.4
Fire 1.4	
Project: 1.4	
Site: 1.4	
Page: 1	

Decision: MANAGEMENT FRAMEWORK PLAN
Accept the MFP II recommendation as written.

Recommendation 1.4.1:
Low-level fuel management is needed to maintain high fire resistance and/or high resource values. Although the resources were mostly of moderate value, private property, maintain the low costs by annual grazing, in the following priority:
A.1. Boulder Park Road
B.1. Lowell Canyon Road
C.1. Highway 88 - Old Route 66 Highway
D.1. Red Rock Summit Road - Willow Springs to Lowell Canyon Road

Supporting Details

Land, city, county, regional, state, and federal cooperation. District Division of Operations, Division of Resources, Planning & Development Coordination Staff, Red Rock Canyon Recreation Area Staff.

Rationale:

Through an efficient fuel system, fire equipment can be utilized to its maximum capability by removing fuel prior to the onset of the fire incident, and by increasing the fuel resistance of the area, thus reducing equipment cost and reducing the potential need for more equipment and equipment.

Salvage-Tax Analysis

The only analysis with this recommendation was from a Red Rock Canyon Recreation Area (RRCRA) master plan that is along the Red Rock Summit Road to which is a 1.4.1. Recommendation 1.4.1. The plan did not, apparently, consider the cost of the fuel management. One of the issues was the cost of the fuel management. In both places, as well as the eastern side of RRCRA, there are fuel management and equipment. In Lowell Canyon there is significant water and fuel management.

Salvage-Tax Analysis

Recommendation 1.4.1.1.

Supporting Details

Firefighting has a high priority in this area of the Spring Mountain Range, because the fire resistance must be as good as possible to maintain resource values.

Supporting Details

Recommendation 1.4.1.1.

Alternative Consideration

Within all roads except the Red Rock Summit Road the fire access.

Decision

Accept the recommendation as written, except that Red Rock Summit Road from the list.

Supporting Details

The rehabilitated roads found to have prohibitive.

100-100

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County
Activity
Fire
Overlay Reference
Step 1 Step 3

Recommendation 1.5:

Improve legal access into areas of high fire occurrence and/or high resource values. Arrange for easements where needed or access across private property. Maintain key BLM roads by annual grading in the following priority:

- A.) Wheeler Pass Road
- B.) Lovell Canyon Road
- C.) Highway 88 (Old Pahrump Highway)
- D.) Red Rock Summit Road (Willow Springs to Lovell Canyon Road)

Support Needs:

Local, city, county, regional, State, and Federal cooperators. District Division of Operations, Division of Resources, Planning & Environmental Coordination Staff, Red Rock Canyon Recreation Lands Staff.

Rationale:

Through an improved road system, fire equipment can be utilized to its maximum capability by reducing travel time to the scene of the fire incident and by increasing its accessibility into the area, thus reducing suppression cost and reducing the potential need for more manpower and equipment.

Multiple Use Analysis

The only conflict with this recommendation comes from a Red Rock Canyon Recreation Lands (RRCRL) master plan item to close the Red Rock Summit Road to vehicular travel (Recreation 1.6). The plan did not, apparently, consider initial attack in wildland fires. Use of the Summit Road (also known as Potato Ridge Road) would significantly quicken response time of fire equipment to Lovell and Trout Canyons. In both places, as well as the western side of RRCRL, there are high resource values-at-risk. In Lovell Canyon there is significant urban-wildland interface.

Multiple Use Recommendation:

Accept recommendation as written.

Reason:

Firefighting has a high priority in this area of the Spring Mountain Range. Response time to wildfires ought to be as rapid as possible to minimize resource loss.

Support Needs:

As stated in MFP 1.

Alternative Considered:

Maintain all roads except the Red Rock Summit Road for fire access.

Decision:

Accept the recommendation as written, except drop Red Rock Summit Road from the list.

Reason:

FY83 rehabilitation studies found the cost prohibitive.

Clark County

Activity
Fire

Overlay Reference
Step 1 Step 3

Recommendation 1.6:

Utilize fire suppression equipment and techniques to their maximum design capabilities as identified in Table 37.3 of Clark County URA, Fire Management.

Support Needs:

District Resource Specialists, District Division of Operations, Fire Management Officer, and Fire Engine Operators.

Rationale:

By operating equipment at the maximum level, the cost-per-unit of work performed is minimized. Also, wildfire is quickly suppressed. By operating equipment in this manner both the cost of the actual fire suppression and the cost of the resource damage by fire are kept to the minimum. By maintaining fire equipment in a constant state of fire readiness overall fire suppression response, cost, and damage can be kept to a minimum.

Due to increasing complexity of fire equipment, i.e., pump operation, apparatus operation, and code driving, maintain a highly trained and experienced cadre that will be available to operate fire equipment to its maximum capabilities.

See Fire 1.4 for multiple use analysis and recommendation.

RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Fire

Overlay Reference

Step 1

Step 3

Recommendation 1.7:

Update all fire-related cooperative agreements on an annual basis.

Support Needs:

Nevada State Office, Branch Fire Management. Local, city, county, regional, State, and Federal cooperators. District Division of Operations.

Rationale:

The time between a fire start and initial attack can easily influence the extent of damage to resource values.

The maintenance and continuity of the cooperative agreements are important because, a) the agreements are a part of the fire management program planning process, b) the amount of public investment in personnel and equipment is influenced by the agreements, c) the positioning or disposition of personnel and equipment is influenced by the agreements, and d) the agreements must be consistent with Bureau and District policy and program activities.

The agreements currently in effect are delineated in the Clark County Planning Area Analysis.

Multiple Use Analysis

The interface of BLM administered lands with other lands administered by various Federal, State, and local agencies requires the maximum cooperation and communication between entities to expediently and efficiently operate a Fire Management Plan. Annual review and communication through cooperative agreement will support BLM fire management planning. New techniques, equipment, funding levels, and available trained staff require periodic review and interagency coordination.

Multiple Use Recommendation:

Accept recommendation as written.

Reason:

This action meets the management objective of maximizing the use of available resources to prevent and suppress fire and to reduce costs.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Accept the recommendation as written.

Activity	Fire
Overlay Reference	
Step 1	Step 3

Recommendation 1.8:

Work closely with the Clark County Coordinator of the office of Volunteer Fire Departments, to achieve cooperation in training, prevention, detection, initial attack, use of facilities, and exchange of fire equipment.

Support Needs:

Nevada State Office, Office of Fire and Aviation Clark County, Office of Volunteer Fire Departments, Local Volunteer Fire Departments; District Division of Administration.

Rationale:

The volunteer fire departments play a key role in the protection of the public lands. The stations are located in remote areas relative to the location of BLM equipment. They are usually the first to arrive at a fire in their protection area. Public lands occur in a protection area. A need exists for standardization of equipment, effective communication, and complementary detection and reporting procedures.

Multiple Use Analysis

In many instances, volunteer fire departments will respond to a wildland fire much quicker than the nearest BLM crew. The ability to reduce fire damage to BLM resources warrants cooperation with local entities. Most volunteer departments need training in the techniques and equipment utilized by BLM.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

This coincides with the management goal to minimize fire losses and costs.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

Step 1

Step 3

Recommendation 1.9:

Develop and implement by FY83 an aggressive District program for investigating fire trespasses.

Support Needs:

Nevada State Office, Branch Fire Management. District, all divisions, all cooperators, law enforcement investigators.

Rationale:

Investigation of fire trespass can accomplish two goals. First, it offers a possible deterrent to potential future arson. Secondly, the Bureau of Land Management can retrieve suppression cost in the case of a proven fire trespass.

Multiple Use Analysis

The need to implement a deterrent to the high rate of man-caused fires is present in Clark County. A secondary benefit could be the recovery of some or all of the money expended to suppress a wildfire. The Mack Canyon Fire of 1981 is a prime example of a man-caused fire that could be used as a deterrent.

Multiple Use Recommendation:

Accept recommendation as written.

Reason:

This action will strengthen and support the Fire Management Program. It also will increase BLM efficiency of operation.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

(Accept the recommendation as written, except drop the FY83 requirement.

Reason:

MFP will only be approved in FY83.

Recommendation 1.10:

Develop a programmatic fire rehabilitation plan for Clark County within two years of the MFP-3 decisions.

Support Needs:

NSO Division of Resources, District Division of Resources, and District Planning and Environmental Coordination Staff.

Rationale:

The following procedures are required in order to utilize emergency fire rehabilitation funds (4630). Starting from control of the fire the following must be completed:

- a) Within 10 days- Examine burned area to determine need for rehabilitation.
- b) Within 30 days- Initiate job planning and project design.
- c) Within 90 days- Initiate actual on-the-ground rehabilitation work.

The preparation of a programmatic EAR containing standard rehabilitation procedures would expedite this required process. Following a fire, a supplemental (site-specific) EAR should be prepared for rehabilitation projects.

See Forestry 3.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Fire
Objective Number
F-2

Objective 2.0:

Use fire as a management tool to enhance conditions of renewable resources or meet management objectives for a site.

Rationale:

Fire can perform multiple functions when properly applied with both the objective and related beneficial results being achieved. The following areas can benefit from the use of prescribed fire and natural fire management.

Fire Prevention: Controlled burning to remove highly flammable fuel types can reduce fire spread and break up fuel continuity.

Range Management: Prescribed fires can improve the availability and nutritive value of forage plants, and also control unwanted woody invaders, such as sagebrush, burroweed, and junipers.

Wildlife Habitat: Wildlife habitat can be improved by the planned use of fire. Many plants used as wildlife forage are prolific sprouters after fire. Natural cover for wildlife can also be manipulated and improved to manage certain species.

Wilderness Areas: Natural prescribed fire can perpetuate natural conditions in wilderness areas.

Forest Protection: Prescribed fire can reduce ladder fuels, reducing overall fire hazard to a forest, and improve seed bed site conditions for many tree species.

Multiple Use Analysis

The objective recognizes fire's natural place in the ecology and the benefits -- in resource management and economics -- available through its use as a management tool. It is in conformance with a growing Bureau policy towards fire management.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Activity
Title
Priority
F-1

Objective 1.1
The plan is a management tool to enhance conditions of resource management at
most management objectives for a site.

Introduction

This plan contains multiple functions when properly applied with the
objectives and related beneficial results being achieved. The following areas
can benefit from the use of prescribed fire and natural fire management.

Fire Prevention: Controlled burning to remove highly flammable fuel types can
reduce fire spread and break up fuel conditions.

Range Management: Prescribed fires can improve the availability and utilization
of forage plants, and also control unwanted woody invaders, such as
sagebrush, juniper, and juniper.

Wildlife Habitat: Wildlife habitat can be improved by the removal of
fuel. Many plants used as wildlife forage and wildlife cover are more
abundant after the wildlife are also be managed and improved on range.

Wilderness Areas: Prescribed fire can maintain natural conditions
in wilderness areas.

Forest Protection: Prescribed fire can reduce ladder fuels, reducing potential
fire hazard in a forest, and improve seed bed site conditions for many tree
species.

Wildlife Use Analysis

The objective management plan's natural place in the ecology and the benefits
to resource management and protection -- wildlife through the use of a
management tool. It is consistent with a grazing business policy through
fire management.

Wildlife Use Recommendation
Adapt the objective as written.

Conclusion
Adapt the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Fire

Overlay Reference
Step 1 Step 3

Recommendation 2.1:

Use fire as a natural tool to achieve resource management goals, through both prescribed burning and modified suppression of wildfires.

Support Needs:

All Resource Specialists, Fire Management Officer, Resource Advisors.

Rationale:

Fire is a cost-effective method when used in resource management. It can be used either alone or in combination with other management methods.

Fuel reduction, species change, stimulating or setting back growth of specific plant species, and water production are practical objectives that can be reached through the use of fire.

A complete fire management program that is based upon and integrated with the Bureau planning system will become a useful adjunct to the present resource management programs.

Prescribed burn areas should be identified through activity planning for specific resources. Burn locations, size, and objectives should be identified then.

Modified suppression areas should be identified on a larger area planning effort, the fire management plan.

Multiple Use Analysis

(Includes Forestry 2.4, 3.1, 3.2, and 3.3, Livestock Grazing 1.10, Wild Horses and Burros 2.1, and Wildlife 1.30)

Utilizing fire as a tool in natural resource management is a relatively new concept in the Las Vegas District. Both prescribed burning and modified suppression of wildfires can be beneficial when managing for specific resource values in multiple use management. A fire management program which would integrate these concepts would be useful.

To best benefit big game in mountain vegetation types, modified suppression of wildfire would effectively reverse trends towards vegetative climax, thus providing preferred use areas for these wildlife species. Increased habitat diversity could also be realized (Wildlife 1.30, Forestry 3.1).

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT PROGRAMS
WILDLIFE AND FISH MANAGEMENT

Section 101
Bureau of Land Management
Washington, D.C. 20250

Introduction

The first and most important step in achieving a wildlife management program is the selection of a management system and the establishment of a management plan.

Management Needs

The management needs of a wildlife management program are determined by the management objectives and the management plan.

Management Objectives

The management objectives of a wildlife management program are determined by the management needs and the management plan.

The management objectives of a wildlife management program are determined by the management needs and the management plan.

The management objectives of a wildlife management program are determined by the management needs and the management plan.

The management objectives of a wildlife management program are determined by the management needs and the management plan.

(Fire 2.1 continued)

Prescribed burning and modified suppression of wildfires can be used economically to remove undesirable vegetation, to the benefit of livestock, wild horses and burros, and selected wildlife species. Fire not only reduces competition between desirable and undesirable plant species, allowing the former to come back in on a fresh burn, but also establishes a range condition suitable for introduction of desirable plant seeds (Livestock Grazing 1.10, Wild Horses and Burros 2.1).

Watershed and timber values can be greatly improved through the use of fire. Wildfire presents a potential hazard to relic stands of timber unique to mountain areas of Clark County due to an accumulation of dense understory vegetation. Prescribed burning can be used to selectively remove these understory materials, subsequently reducing hazards (Forestry 2.4). Some species, such as Douglas fir, depend exclusively on fire to release their seeds for regeneration (Forestry 2.4). Mechanical treatments, incorporating fire, on watershed areas can greatly reduce damage caused by flooding while increasing such values as ground infiltration (Watershed 4.7).

Benefits derived from a prescribed burn and modified suppression program are far-reaching beyond the direct resource improvements expected from such a program.

In the Spring Mountains, where the recreational resource will command priority over management of other resources (Recreation 5.1), the threat of wildfire to campgrounds, structures, and recreationists would be reduced through a fire management program. Any action taken in this area would be done in coordination and with the cooperation of the recreation program.

In addition, the Spring Mountain Range has many high value-at-risk areas and a great deal of urban-wildland interface (Fire 1.2, 1.4). Modified suppression of wildland fires in that area would probably generate a great deal of negative public reaction (PAA).

In timbered areas where the preservation of relic tree species is not a priority, the wood can be salvaged by the public prior to a prescribed burn.

It is important that the Bureau make every effort to educate the public on the merits and possible adverse consequences of prescribed burning and suppression goals. In the past, the Bureau's program to alert the public as to the adversity of wildfire has been successful, but further attempts should be made to educate these same people as to the benefits which can also be derived from fire when used in a controlled setting as a management tool.

Prescribed burning and modified management of wildlife can be used to enhance the value of the riparian zone, to the benefit of riparian wildlife and riparian habitat. The riparian zone is a narrow strip of land along the river, which is a natural habitat for many species of wildlife. The riparian zone is a narrow strip of land along the river, which is a natural habitat for many species of wildlife. The riparian zone is a narrow strip of land along the river, which is a natural habitat for many species of wildlife.

Wildlife and riparian habitat are closely linked. The riparian zone is a narrow strip of land along the river, which is a natural habitat for many species of wildlife. The riparian zone is a narrow strip of land along the river, which is a natural habitat for many species of wildlife.

Multiple Use Recommendation:

Modify the recommendation as follows: Develop a county-wide program to utilize prescribed burning and modified suppression of wildfires as a vegetation manipulation tool. Vegetation manipulation areas must be identified through activity plans (AMP, HMP, HMAP, etc.) and must serve multiple-use objectives. The first manipulation area should be identified in FY83, for implementation during FY85, so as to allow two years for the sale of firewood and other products on the burn site. Greenwood cutting should precede all prescribed burns. Prescription for a burn/modified suppression site should be developed within one year after site identification. Sites with relatively rare tree species, (e.g., ponderosa pine, Douglas fir, bristlecone pine, etc.), may be selected for prescribed burning to remove undergrowth and aid regeneration, but extreme care must be taken to avoid damage or destruction of the key tree species. Modified suppression plans should be closely coordinated county-wide with adjacent landowners and firefighting agencies. No modified suppression of wildland fires will be used in the Spring Mountain Range. Prescribed burning in the Spring Mountain Range must be closely coordinated with, and subordinated to, recreation plans. Develop, and implement during FY84, a public education program explaining the purposes, ecological benefits, and economics of fire as a resource management tool.

Support Needs:

As stated in MFP 1.

Reason:

Prescribed burning is a proven, cost-effective method of vegetation manipulation to serve multiple use management objectives. Modified suppression can be used in lieu of a total suppression effort in those areas where pre-planned, management objectives can be obtained and danger to life or private property is non-existent. As a primary recreation area, prescribed burning plans in the Spring Mountains must be subordinated to recreation plans. Moreover, the high values-at-risk and the urban-wildland interface preclude any reasonable and safe use of modified suppression in that mountain range.

Alternatives Considered:

1. Allow no prescribed burning in the Spring Mountain Range.
2. Use no fire District-wide as a management tool.

Decision:

Accept the MFP II recommendation as written.

Vegetation and Ecosystems

Vegetation is the most important factor in determining the structure and function of an ecosystem. It is the primary source of food and shelter for most organisms, and it plays a major role in the cycling of nutrients and the regulation of climate. The composition and structure of vegetation are determined by a number of factors, including climate, soil, and the presence of other organisms. The study of vegetation and ecosystems is a complex task, and it requires a multidisciplinary approach. This report describes the results of a study of the vegetation and ecosystems of a particular area, and it discusses the implications of the findings for the management of the area.

Vegetation and Ecosystems

As stated in the report...

Vegetation and Ecosystems

Vegetation is the most important factor in determining the structure and function of an ecosystem. DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Fire
Overlay Reference	Step 1 Step 3

Recommendation 2.2:

Develop a prescribed fire workshop program to include the most recent concepts and developments in the area of fire management and prescribed fire techniques, for all District personnel. This program should precede development of proposed prescribed burn areas.

Rationale:

By establishing a program for District personnel concerning techniques in prescribed fire, District personnel will be more adequately equipped to understand program, support, and work on prescribed fire projects.

Support Needs:

Nevada State Office, all branches;
District Office, all divisions.

Multiple Use Analysis

Fire as a management tool, as a natural part of the ecology, is a relatively unknown factor to resource specialists and managers. Yet it offers an excellent cost-effective means of reaching certain management objectives. A workshop such as this would provide the guidance needed to work the program into the management scheme at all levels.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

Such a program would be an excellent learning experience.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Accept the recommendation as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Watershed
Objective Number
W-1

Objective 1.0:

Provide public land resources in Clark County to aid in reducing consumption and the deterioration of quality of groundwater supplies brought on through urban usage.

Rationale:

Continued per capita consumption of water in Clark County will result in future shortages, assuming continued population growth. While the BLM cannot meet the water needs of Southern Nevada, it can encourage the conservation of existing supplies.

Multiple Use Analysis

The objective serves overall public purposes in Southern Nevada. It should be understood that it is not a primary responsibility of BLM to foster the goals of this objective, but that BLM should stand ready to respond constructively to local requests for support in achieving these desirable goals. In this light, the objective is consistent with "good neighbor" and "public service" concepts recently enunciated by the Bureau's leadership.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective to be modified as follows:

Provide public land resources (e.g., desert vegetation, sand and gravel to promote water conservation landscaping) in Clark County to aid in reducing consumption and the deterioration of quality of groundwater supplies brought on through urban usage.

Reasons:

A comment pertained to the clarity of the objective, as to precisely what public resources would be provided. Therefore, the objective has been stated more explicitly.

Step 1 Step 3

Recommendation 1.1:

Develop a desert vegetation sale/permit system to salvage vegetation in areas to be disturbed, such as roadways, pipelines, proposed burn areas, etc., to provide vegetation for water conservation landscaping.

Support Needs:

Forestry, all surface disturbing activities.

Rationale:

Projections of water consumption in Las Vegas indicate water shortages around the turn of the century in the Las Vegas Valley. Approximately 60% of the water currently used in Las Vegas is expended in landscaping. By converting to water conservation landscaping, .18 to .24 acre-feet/yr/capita can be conserved. Multiplied by current Water District service to 376,000 persons and the projected year 2000 service to 640,000 persons, converting to water conservation landscaping could save 67,080 to 90,240 AF/yr now, and 115,200 to 153,600 AF/yr in the year 2000. If such conservation is not exercised, demand for water will force importation from other areas, including adjoining Bureau lands. The Bureau can promote water conservation landscaping by making desert vegetation available.

See Forestry 1.3 for multiple use analysis and recommendation.

Project Name	Water Conservation
Project Number	1000
Project Location	Las Vegas Valley
Project Status	Completed
Project Date	1965

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
WATER CONSERVATION - LAS VEGAS VALLEY

Background:
The objective of water conservation is to ensure that water resources are available for the future. The Las Vegas Valley is a semi-arid region with limited water resources. The water supply is primarily derived from the Colorado River. The population of the Las Vegas Valley has increased significantly since 1950, and the demand for water has increased accordingly. The water conservation program is designed to reduce water consumption and to ensure that water resources are available for the future.

Objectives:
The objectives of the water conservation program are to:
1. Reduce water consumption by 10% by the year 2000.
2. Increase water efficiency by 20% by the year 2000.
3. Promote water conservation in the residential, commercial, and industrial sectors.
4. Educate the public about water conservation.

Implementation:
The implementation of the water conservation program will be carried out in three phases. Phase I will focus on the residential sector, Phase II on the commercial sector, and Phase III on the industrial sector. The program will be implemented through a combination of regulatory measures, incentives, and public education.

Monitoring and Evaluation:
The progress of the water conservation program will be monitored and evaluated on a regular basis. The monitoring will be carried out through a series of water audits and surveys. The evaluation will be carried out through a series of impact studies.

Implementation:
The implementation of the water conservation program will be carried out in three phases. Phase I will focus on the residential sector, Phase II on the commercial sector, and Phase III on the industrial sector. The program will be implemented through a combination of regulatory measures, incentives, and public education.

Monitoring and Evaluation:
The progress of the water conservation program will be monitored and evaluated on a regular basis. The monitoring will be carried out through a series of water audits and surveys. The evaluation will be carried out through a series of impact studies.

Conclusion:
The water conservation program is a critical component of the Las Vegas Valley's water management strategy. It is essential for ensuring that water resources are available for the future and for promoting sustainable development in the region.

See Appendix I for schedule and implementation.

Clark County

Activity

Watershed

Overlay Reference

Step 1

Step 3

Recommendation 1.2:

Provide public land for use by entrepreneurs to develop agricultural techniques for, and to conduct commercial propagation of, desert plants.

Support Needs:

Lands, environmental education.

Rationale:

One problem with water conservation (desert) landscaping is the lack of knowledge regarding the propagation and growth requirements of the vegetation. Providing land through appropriate disposal policies would encourage entrepreneurs to develop nurseries or demonstration areas such as the Kiwanis Club's Ecologeum now (1980-81) under construction on Las Vegas Valley Water District land on Alta Drive.

Such nurseries could provide the metropolitan areas with desert vegetation for landscaping. Local availability of desert plants through commercial outlets should reduce pressures on wild vegetation also.

Such areas could also assist in educating the public towards such landscaping practices.

See Lands 1.4 for multiple use analysis and recommendations.

Notes: Attach additional sheets, if needed

Step 1 Step 3

Recommendation 1.3:

Promote a sale/permit system to encourage entrepreneurs to gather desert vegetation seeds for supply to nurseries, government agencies, and others interested in native vegetation propagation.

Support Needs:

To be determined.

Rationale:

The cultural propagation of many native vegetation species is difficult because of the lack of seed sources. Also, having local sources would greatly assist in the success of fire rehabilitation or range improvements involving vegetation conversions. The scientific community could benefit by having seeds from new sources.

Multiple Use Analysis

Requests for the acquisition of desert vegetation seed are provided for in the Bureau's vegetation disposal program and will be treated in the same way. The demand for seed from commercial retailers is not known but requests are minimal. Requests to gather seed can be administered on a case-by-case basis with a stipulation attached to each permit providing that a sufficient seed source be left in an area of harvest.

Multiple Use Recommendation:

Drop this recommendation.

Reason:

This recommendation is provided for by normal Bureau and District administrative procedures.

Decision:

Accept the MFP II recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Watershed

Objective Number

W-2

Objective 2.0:

Take action on public land in Clark County to assist in limiting flood and sediment damage to private property.

Rationale:

As the population of Southern Nevada increases, so does encroachment on floodplains. Such encroachment reduces the beneficial values of floodplains, causing a corresponding increase in flood and sediment damage. Executive Order (EO) 11988 mandates that all Federal agencies maintain the beneficial value of floodplains. Discussion with local agencies indicates a willingness to work together to minimize future flood damage.

Multiple Use Analysis

The objective is reflective of goals set up in the cited Executive Order. It implies a responsibility by the Bureau to act independently of its other resource management responsibilities to limit flood and sediment damage. Given the enormous amount of public land surrounding Clark County communities, this objective would commit the Bureau to staggeringly expensive preventive and rehabilitative actions.

Multiple Use Recommendation:

Modify the objective as follows:
Insure that public land management actions in Clark County do not increase the potential for flood and sediment damage to private property.

Decision:

Accept the objective as modified in MFP II.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
POTENTIAL LAND-USE DESIGN

Introduction
The purpose of this plan is to provide a framework for the management of the land within the designated area. This plan is based on the best available information and is subject to change as more information becomes available. The plan is intended to guide the management of the land in a way that is consistent with the goals and objectives of the Bureau of Land Management.

Background
The land within the designated area is located in the State of California. The land is currently owned by the State of California and is being managed by the Bureau of Land Management. The land is being managed in a way that is consistent with the goals and objectives of the Bureau of Land Management.

Objectives
The objectives of this plan are to provide a framework for the management of the land in a way that is consistent with the goals and objectives of the Bureau of Land Management.

The land is to be managed in a way that is consistent with the goals and objectives of the Bureau of Land Management.

Step 1 Step 3

Recommendation 2.3:

Provide right-of-way access where necessary for local flood control agencies to develop or maintain flood control developments. Consider such disposal as the best use of the land.

Support Needs:
Lands program.

Rationale:

Flood hazards, particularly in the Las Vegas Valley, are real. Damaging floods will occur, with possible loss of life. It is imperative that the Bureau cooperates to the fullest possible extent to reduce flood hazards. The Bureau can assist local flood control agencies by allowing local flood control agencies to develop or maintain drainage areas, "greenbelt" flood areas, etc., on or across public lands.

Multiple Use Analysis

Providing access to flood control developments through the right-of-way authority may or may not conflict with other resource values, depending upon the location, size, and situation.

Multiple Use Recommendation:
Drop this recommendation.

Reason:
Present right-of-way authorities require assessment and processing of applications on a site-specific, case-by-case basis. This allows the best multiple-use oriented decision to be made on an individual basis. Also, granting across-the-board access to "flood control developments" without proper statutory case processing would be in violation of Federal regulation.

Support Needs:
None.

Alternative Considered:
None.

Decision:

Modify the MFP II recommendation as follows:
Provide right-of-way access where necessary for local flood control agencies to develop or maintain flood control developments. Cooperate with

Reasons:

Watershed 2.3 is included in MFP III due to a comment that a statement is needed on BLM cooperation with Clark County and other local agencies regarding flood management. The decision now contains language which

(Watershed 2.3 continued)

local flood control agencies on a site-specific and case-by-case basis to provide right-of-way access for flood control structures, maintenance of drainage areas, and "greenbelt" flood areas on public lands.

Coordinate with Clark County Department of Comprehensive Planning during case processing and environmental assessment. Consider such disposal as the best use of the land.

specifies that each flood control proposal will be handled on a case-by-case and site-specific basis, as is required in statutory case processing.

Multiple Use Analysis

The objectives as written are consistent with Bureau policy and guidance regarding multiple use. Working towards this objective will give increased public participation and improve resource management.

Multiple Use Recommendations

Adopt the following as written.

Conclusion

Adopt the following as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Watershed

Objective Number

W-3

Objective 3.0:

Maintain/improve the water quality of streams and springs on public lands in accordance with State and Federal regulations.

Rationale:

Several authorities affect the maintenance of water quality of streams and springs, including Public Laws 92-500, 94-523, and 95-217, Executive Orders 11752, 11514, and 5003, and State of Nevada criteria, regulations, and Best Management Practices, as described in the District Water Management Plan. Current degradation of spring sources appears to be in violation of State regulations. Water quality should be monitored, and a program to restore spring and stream integrity should be initiated.

Multiple Use Analysis

The objective as written is consistent with Bureau policy and guidance provided by Congress. Working towards this objective will serve important public purposes and improve resource management.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Watershed

Overlay Reference
Step 1 Step 3

Recommendation 3.1:

Fence off springs and seeps currently being degraded by livestock, wildlife, or wild horses and burros to restore or maintain water quality, while providing water for these animals by piping it outside of the enclosure to a trough. Priority consideration should be given to those springs in areas with high recreational use or potential and to springs with high wildlife habitat values. Monitor water quality of springs to determine the need for, and success of, water fencings.

Support Needs:

Wildlife, Livestock, Wild Horse and Burro Programs; Division of Operations.

Rationale:

The Clark County URA indicates many springs and seeps are currently being degraded by animals trampling the source and contaminating the water with fecal material. Such contamination is inconsistent with State regulations. Maintaining water sources at their highest potential quality will benefit multiple use management of that water.

See Wildlife 1.35 for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 3.2:

Do not allow competitive ORV events within one-quarter of a mile of any water source.

Support Needs:

Recreation-SRUP Program.

Rationale:

Inadvertent or intentional degradation of water sources may occur if ORV users view water sources, or the surrounding riparian habitat, as areas suitable for ORV traffic. Restricting competitive events from the quarter-mile zone would protect water sources from the most damaging ORV uses. The quarter-mile distance recommended is based on the Congressional and Executive determinations of that distance as the necessary area to protect public water reserves for public uses (see 43 CFR 2311.0-3(a)(1)).

See Recreation 6.4 for multiple use analysis and recommendation.

Step 3

Recommendation 3.3:

Eliminate disturbance to riparian vegetation along Las Vegas Wash, Meadow Valley Wash, the Muddy River, and the Virgin River by limiting ORV, and other surface disturbing activities.

Support Needs:

Recreation, livestock management, and other surface disturbance regulating activities.

Rationale:

Disturbance of streamside vegetation increases bank erosion and accompanying sediment production. EO 11990 requires Federal agencies to minimize wetland degradation and to preserve and enhance wetland values. BLM Instruction Memo 78-410 states that protection of streams, riparian zones, and wetlands may be accomplished by fencing, adjustments in livestock use, and establishment of buffer strips as well as other techniques.

See Wildlife 1.1 for multiple use analysis and recommendation.

Note: Attach additional sheets, if needed

Step 1 Step 3

Recommendation 3.4:

Assess all Bureau-initiated and Bureau-authorized activities for nonpoint-source pollution potential. Minimize all such potential for pollution following Best Management Practices (BMPs) as identified by the State of Nevada. Monitor potentially impacted streams to determine the effects of such activities.

Support Needs:

All programs.

Rationale:

Nonpoint-source pollution is that pollution not readily related to a particular source. Activities related to disturbance of rangelands may contribute to water pollution. The Water Pollution Control Act (P.L. 92-500) and the Clean Water Act (P.L. 95-217) identify maintenance and restoration of water quality as a national objective. The BLM is further committed to the abatement of nonpoint-source pollution by written agreement with the Nevada Department of Environmental Protection, as described in the Memorandum of Understanding of December 31, 1980.

Multiple Use Analysis

There are no recommendations that directly conflict with this recommendation. It does complement other watershed recommendations. The recommendation has a positive social impact by providing improved water quality. However, certain activities, by their nature, could conflict with BMPs. A case-by-case analysis would determine this and identify needed resolution.

Multiple Use Recommendation:

Accept recommendation as written.

Reason:

As stated in the Multiple Use Analysis.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the MFP II recommendation as written.

Reasons:

A comment was made that the measures appear to be consistent with the 208 plan but noted that the plan was not specifically mentioned. In response, the 208 plan originated from the Water Pollution Control Act and the Clean Water Act, both of which have been discussed in the rationale.

Recommendation 3.5:

Initiate an active road maintenance program employing the use of redesign, blading, gravelling, water barring, spur ditching, and installing of culverts to reduce erosion and sediment damage caused by improper design or poor maintenance.

Rationale:

Improper road design or maintenance results in erosion of the road and adjacent land, and associated sediment production. Identification of areas requiring attention should be made by all field personnel and reported to Division of Operations.

Support Needs:

Division of Operations.

See Livestock Grazing 2.3 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Watershed
Objective Number
W-4

Objective 4.0:

Maintain/improve watershed conditions to reduce erosion and sedimentation and to enhance site productivity.

Rationale:

Most of Clark County has land with slight to moderate erosion condition classes. Some areas have critical erosion conditions, some have deteriorating conditions, and other areas have soils highly susceptible to erosion from any disturbance. Such areas must be identified further and protected. Restricting use on some areas could deleteriously affect certain groups of land users, such as ORVers and ranchers. The designation of an ORV play area, such as in the Las Vegas Dunes and Dry Lake, and developing a Recreation Management Plan for the area, could reduce ORV disturbance elsewhere, concentrate use in a manageable area, and promote good public relations.

Multiple Use Analysis

The objective, as written, is consistent with Congressional guidance provided in FLPMA (Sec. 102(a)(8)) and serves resource management goals across the board.

Multiple Use Analysis:

Accept the objective as written.

Decision:

Accept the objective as written.

State of	Utah
County of	Wasatch
City of	Albany
Section	36
Range	12N
Township	12N

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY ONE: STUDY

Objective A-1:
Maintain/improve watershed conditions to reduce erosion and sedimentation and to
enhance site productivity.

Justification:
Most of Basin County has been left alone to provide erosion protection. Some areas have critical erosion conditions; some have deteriorating conditions, and other areas have soils highly susceptible to erosion from any disturbance. Such areas must be identified, inventoried, and monitored. Erosion control measures could substantially reduce erosion damage to land users, such as highways and structures. The designation of an O&A study area, such as the Las Vegas Basin and Dry Lake, and development of a Erosion Management Plan for the area, could reduce O&A disturbance elements, contribute to a more stable site, and promote good public relations.

Multiple Use Analysis:
The objective, as written, is consistent with (Bureau's) policies provided in PLM (sec. 1011-1013) and better resource management goals across the board.

Multiple Use Analysis:
Accept the objective as written.

Decision:
Accept the objective as written.

Recommendation 4.1:

Develop a programmatic fire rehabilitation plan to ensure prompt rehabilitation before watershed degradation occurs.

Support Needs:

Fire Control Officer and Fire Boss of Overhead Team on project fires; soil scientist, vegetation specialist, hydrologist.

Rationale:

Current fire rehabilitation efforts start examining needs after the fire crew has been dispersed, and involve time delays to examine the site, write rehabilitation needs, obtain materials, and implement. These delays have taken months to complete in the past; during this time serious watershed degradation could occur. By having an in-hand rehabilitation plan, some rehabilitation needs may be completed before the fire crew, or equipment, are released from the fire. Time spent to determine site-specific rehabilitation needs can be minimized, and the overall time required to rehabilitate the site reduced.

Step 3

Recommendation 4.2:

Develop a county-wide value-at-risk analysis, which addresses watershed values, to provide response priorities for wildfire suppression efforts.

Support Needs:

Fire Management, all activities.

Rationale:

By identifying those areas where fire would seriously harm watershed values, protection of the values would be enhanced. The analysis would also aid in determining restrictions on fire-fighting operations so that the values are not degraded by the protection effort.

See Fire 1.2 for multiple use analysis and recommendation.

Step 1 Step 3

Recommendation 4.3:

Maintain supervision of vegetation products sale areas to protect watershed values from inadvertent degradation by clients.

Support Needs:
Forestry.

Rationale:

Unrestricted user access to wood sale areas results in unauthorized roads and in some cases serious watershed damage. This is especially harmful in burn areas, where permits are sold to collect dead wood; the Lovell Canyon burn, where unlimited use of vehicles by woodcutters established tracks and gullies, is a case in point. On-site supervision could prevent unnecessary vehicle-caused damage.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS OF

Project Name	
Project Number	
Project Location	
Project Status	
Project Date	

Introduction
This document was prepared as a result of a study conducted by the Bureau of Land Management (BLM) in cooperation with the U.S. Forest Service (USFS) and the U.S. Fish and Wildlife Service (USFWS). The study was conducted to assess the current status of the land and to develop a management framework plan for the future. The plan will provide a guide for the management of the land and will be used by the BLM, USFS, and USFWS to make decisions about the future of the land.

Recommendation 2.1:
The BLM should develop a management framework plan for the future of the land. The plan should be developed in cooperation with the USFS and USFWS and should provide a guide for the management of the land.

Recommendation 2.2:
The BLM should develop a management framework plan for the future of the land. The plan should be developed in cooperation with the USFS and USFWS and should provide a guide for the management of the land.

Recommendation 2.3: The BLM should develop a management framework plan for the future of the land. The plan should be developed in cooperation with the USFS and USFWS and should provide a guide for the management of the land.

Recommendation 4.4:

Encourage recreational ORV use in designated areas, such as the Las Vegas Dunes Play Area, to offset ORV degradation of soils in more critical areas.

Support Needs:

Recreation Program; public education; contact with ORV groups.

Rationale:

By encouraging use in certain areas identified for their environmental and social suitabilities, use in other less suitable areas may be reduced. Developing an RMP would demonstrate the Bureau's commitment to provide recreational areas for ORV use while still protecting unsuitable areas.

See Recreation 1.8 for multiple use analysis and recommendation. See also Recreation 6.4.

Overlay Reference
Step 1 Step 3

Recommendation 4.5:

Adopt protective actions to maintain or enhance watershed conditions. Such actions should include those on Table WS-4.5.

Support Needs:

ORV Designations; Livestock Grazing, and Wild Horse and Burro programs.

Rationale:

Areas with a high erosion condition (SSF) or erosion hazard have been identified. The best way to reduce or prevent high rates of erosion on these areas is to maintain the highest possible level of ground cover. This can be done by management actions including the following:

1. Limiting ORV use on areas with critical or severe erosion conditions and/or high erosion hazards.
2. Reducing grazing or disallowing introduction of grazing animals in areas with critical or severe erosion condition until the erosion condition reaches moderate levels. Changes in erosion conditions could be evaluated following 25% incremental increases in perennial vegetation and persistent litter as determined by the trend studies used in monitoring the grazing system. In these monitoring study designs, inclusion of critical or severe watershed areas should be made.
3. Minimizing the amount of construction-related activities in areas with critical or severe erosion conditions and/or high erosion hazards.

Multiple Use Analysis

This recommendation conflicts primarily with soil-disturbing activities such as intensive ORV usage, mining operations, construction such as pipeline and utility transmission lines, roadways, etc. These activities, particularly in soils with high erosion hazards, can break up the pavement, exposing the soil to the effects of wind and water. In the long run, adverse effects to the soils will affect the entire food chain. It directly affects man through air pollution and water quality degradation.

(Watershed 4.5 continued)

Multiple Use Recommendation:

Accept the recommendation as written except for the ORV segment, which will be analyzed in Recreation 6.4.

Reason:

Southern Nevada soils are relatively fragile and easily susceptible to erosion and other losses of watershed values.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Less restrictive actions.
 2. More restrictive actions.
-

Decision:

Accept the recommendation as written except for the ORV segment, which will be analyzed in Recreation 6.4.

TABLE WS-4.5

SSF Class	Erosion Hazard	Protective Action	
		Grazing	Construction
Severe	High	3	4
Severe	Medium	3	4
Severe	Low	3	4
-Critical	High	3	4
-Critical	Medium	3	4
-Critical	Low	3	4

-Moderate	Medium		
-Moderate	Low		
-Slight	High		4
-Slight	Medium		
-Slight	Low		
-Stable	High		4
-Stable	Medium		
Stable	Low		

Protective Actions:

1. Limit all recreational ORV use to existing roads and trails.
2. Limit organized or multi-vehicular ORV use to existing roads and trails.
3. Making use of a coordination and consultation process, change management of grazing animals in such a way that vegetation and plant litter ground cover is incrementally increased by 25% and the erosion condition is reduced to the moderate SSF class.
4. Minimize construction-related activities in these areas.

Clark County

Activity
Watershed

Overlay Reference
Step 1 Step 3

Recommendation 4.6:

Develop and initiate comprehensive management plans for major watersheds including BLM-administered portions of the Virgin River, the Muddy River, and Meadow Valley Wash.

Support Needs:

All activities.

Rationale:

By developing comprehensive watershed improvement plans, the need for action may be identified and planned in a logical sequence of activity. Approaching the maintenance of watershed values from the crisis mode does little to prevent problems, allows small reversible problems to become major concerns, and may allow irreversible damage to range productivity and water quality to occur.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

Activity
Watershed

Overlay Reference
Step 1 Step 3

Recommendation 4.7:

Consider the following watershed treatments as depicted on the Watershed MFP Overlay in the development and implementation of AMPs, fire rehabilitation plans, HMPs, and watershed improvement packages:

- Mechanical Treatments (prescribed burn as alternative)
- Chemical Treatments (prescribed burn as alternative)
- Watershed Tillage
- Water Control

Support Needs:

Livestock, Wild Horse and Burro, and Wildlife Habitat management programs; Fire Management Officer.

Rationale:

The Phase I WC&D Inventory identified these areas as suitable for these types of treatments. By implementing these treatments, a variety of watershed improvement goals could be achieved, including reduction of flood/sediment damage, erosion, and overland flow, and increase in infiltration, ground cover, and water quality. Considering these treatments when developing other management plans will facilitate the improvement of watershed and range conditions for a variety of resource benefits.

See Wild Horses and Burros 2.2 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
WILDLIFE MANAGEMENT - 1970-1975

Approved	Special Agent
Reviewed	Special Agent
Checked	Special Agent
Done	Special Agent

Background:
The Bureau of Land Management (BLM) is responsible for the management of public lands. This includes the protection of wildlife and their habitats. The BLM has a long history of working with the U.S. Fish and Wildlife Service (FWS) to manage public lands for wildlife. This plan outlines the BLM's management framework for wildlife from 1970 to 1975. It includes a description of the BLM's current management practices and a plan for future actions. The plan is based on the BLM's current management practices and the FWS's current management practices. The plan is designed to ensure that the BLM's management practices are consistent with the FWS's current management practices. The plan is designed to ensure that the BLM's management practices are consistent with the FWS's current management practices. The plan is designed to ensure that the BLM's management practices are consistent with the FWS's current management practices.

Objectives:
The BLM's management framework for wildlife from 1970 to 1975 is designed to achieve the following objectives:
-- Increase the number of wildlife species that are protected on public lands.
-- Increase the number of wildlife species that are protected on private lands.
-- Increase the number of wildlife species that are protected on federal lands.
-- Increase the number of wildlife species that are protected on state lands.
-- Increase the number of wildlife species that are protected on local lands.

Supporting Data:
The BLM's management framework for wildlife from 1970 to 1975 is based on the following supporting data:
-- The BLM's current management practices.
-- The FWS's current management practices.
-- The BLM's current management practices.
-- The FWS's current management practices.

The Wild Horse and Burro Act of 1971 provides for the management of wild horses and burros on public lands. This act is designed to ensure that the BLM's management practices are consistent with the FWS's current management practices. The act is designed to ensure that the BLM's management practices are consistent with the FWS's current management practices. The act is designed to ensure that the BLM's management practices are consistent with the FWS's current management practices.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Watershed

Overlay Reference
Step 1 Step 3

Recommendation 4.8:

Develop and implement an evaluation and maintenance plan for watershed control structures within Clark County.

Support Needs:

Division of Operations.

Rationale:

BLM Manual 7120 states that all water control structures will be inspected and maintained annually. Maintaining operational status of these facilities will ensure that each facility will continue to operate in its designed function--erosion control, water detention, etc. A prerequisite for maintenance is identification of all such structures on Bureau lands.

Multiple Use Analysis

The function monitoring and maintenance checks on watershed control structures are important in ensuring their proper working ability. In Clark County, where watershed values can be critical due to a high erosion potential and low water detention ability, control structures are important in regulating this resource. The well-being of other resource values, e.g., vegetation, wildlife, etc., are directly contingent on proper use of the watershed.

Multiple Use Recommendation:

Accept recommendation as written.

Reason:

The proper functioning of watershed control structures is extremely important to the quality of all other resource values.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

Decision:

Accept recommendation as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Range Management

Objective Number

Objective 1.0:

Maintain and improve the condition of the public rangelands, through management of grazing animals, so that the rangelands become as productive as feasible for all range resources.

Rationale/Multiple Use Analysis

This objective, developed during MFP Step II, is reflective of an overall management goal for rangeland in Clark County. These lands support domestic livestock, wildlife, and wild horses and burros. These foraging uses represent the highest and best use of these lands, since they are unsuited, generally, for agriculture or forestry. The focus for rangeland management ought not to be the foraging animal, per se, but the vegetation and watershed resources which permit that grazing. None of the MFP Step I objectives focus on this key element, concerned as they are with the class of animal utilizing that forage. Indeed, the public rangelands, in their richness, are supportive of numerous other management programs involving human uses of that resource: watershed, recreation, fire management, forestry, etc. Lacking a healthy range, all those activities would ultimately suffer.

This objective conforms excellently to the sentiment of "multiple use" and "sustained yield" expressed in the Federal Land Policy and Management Act (FLPMA) of 1976; to the guidance to "manage, maintain, and improve the condition of the public rangelands" found in the Public Rangelands Improvement Act of 1978; to the mandate in FLMA to provide food and habitat for fish and wildlife; to the regulatory requirement to manage wild horses and burros and their habitat "to achieve and maintain a thriving ecological balance on the public lands and a thriving population of sound healthy animals" (43 CFR 4700.0-6(a)); and "to stop injury to the public grazing lands by preventing overgrazing and soil deterioration, to provide for their orderly use, improvement, and development, to stabilize the livestock industry dependent upon the public range," as called for by the Taylor Grazing Act of 1934.

To this end, the following activity recommendations will be transferred to and analyzed as Range Management recommendations:

LG 1.1	WHB 1.2	WL 1.11
LG 1.2		WL 1.12
LG 1.3		WL 1.13
LG 1.6		WL 1.14
		WL 2.4
		WL 2.5

Multiple Use Recommendation:

Accept the objective as written.

Range Management 1.0 continued)

Decision:

Accept the objective to be modified as follows:

Maintain and improve the condition of the public rangelands, so that the rangelands become as productive as feasible for all range resources.

Reason:

One comment suggested that BLM should delete the phrase "through management of grazing animals" because this limits the ways to improve rangelands. The statement does limit the BLM to improvement with grazing animals, which is not the case. There are other means of improvement (e.g., mechanical and chemical treatments). Therefore, the phrase "through management of grazing animals" has been deleted.

Discussion

During the project, it is realized as follows:
The project has been the result of the project, and the project has been the result of the project, and the project has been the result of the project.

Results

The project has been the result of the project, and the project has been the result of the project, and the project has been the result of the project. The project has been the result of the project, and the project has been the result of the project, and the project has been the result of the project. The project has been the result of the project, and the project has been the result of the project, and the project has been the result of the project.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Range Management

Overlay Reference

Step 1

Step 3

Recommendation 1.1:

Determine proper stocking rates of domestic livestock on ephemeral-perennial allotments through a range monitoring system, and the Coordinated Resource Management and Planning (CRMP) process. Use CRMP to establish initial stocking rate for grazing year 1983. Initiate first adjustments during FY85 and attain balance of use with capacity during FY90.

Support Needs:

Wild Horse & Burro, Wildlife, and Watershed Programs, Public Affairs, funds to accomplish monitoring system.

Rationale:

Monitoring studies, incorporating basic data developed during the 1979 range survey in Clark County, will provide a clear picture of ongoing use of forage, condition of the range, and other data needed to effectively and judiciously manage grazing use over the long term. The CRMP process will assure that the interests of all parties affected by rangeland decisions are considered in reaching those decisions.

Multiple Use Analysis

(Includes Livestock Grazing 1.1, Range Management 1.5, 1.6, 1.7, and 1.8)

Because of overlapping diets among livestock, wild horses and burros, and wildlife, competition for forage can be intense. In Southern Nevada, where climatic conditions are extreme, the perennial forage resource is meager. Competition for such forage is keen, particularly among year-round grazers such as wildlife (Range Management 1.7, 1.8, 1.9 and Wildlife 1.22) and wild horses and burros (Range Management 1.8). For other wildlife, such as desert tortoise (Wildlife 3.5), availability of forage during the spring is an important habitat requirement. Bighorn sheep is a species particularly sensitive to competition from other grazers. In fact, historical evidence is clear that bighorn were formerly more abundant throughout Southern Nevada. Forage competition between the sheep and domestic livestock and wild burros is one major factor in the sheep population's decline from historic levels. Other factors are water and space competition as well as disease introduced by domestic sheep.

A key element in balancing the forage supply-demand equation is the number animals grazing at different times. Livestock numbers are relatively easy to control. Wild horse and burro numbers are controllable, but with difficulty and at great expense. Wildlife populations are most difficult to control, the usual device being fall harvest of selected numbers by hunters.

(Range Management 1.1 continued)

Each class of animals has a large and vocal public expecting its interest to suffer a minimal amount when it comes to forage allocations. Big game wildlife species -- mule deer and bighorn sheep -- are favorite hunting species in the state. While Clark County ranges could never accommodate the hunting demand from Las Vegas (Recreation 2.8), increased populations of the animals could offer some assistance to NDOW in meeting the demand. The animals also are an important component of outdoor recreation in general (Recreation 2.4) and are in demand by campers, hikers and other recreationists. The small elk population on the Spring Mountain Range is important in this latter respect. In addition to these animals' role in the ecology of Southern Nevada, their recreational and hunting value is of significant economic importance to Las Vegas (PAA).

Wild horses and burros are important to a large segment of the population. The Wild Horse and Burro Act of 1971 was passed unanimously by Congress amid a rarely matched outpouring of public sentiment in favor of the animals. A recent expenditure of large amounts of private funds to rescue wild burros from the Grand Canyon testifies that sentiment is still present in strength.

The livestock operators in Clark County, although few in number and representing less than one percent of the gross income of the county, perceive their operations as economically important to them. The Western livestock industry stands ready to defend that economic interest along with the historical and social implications of ranching in the West.

Use conflicts are inevitable among the three classes of animals. When the conflicts do exist, resolution may well require adverse impacts to one or more of the types of animals. Non-resolution of the conflict may well lead to severe degradation of the rangeland's vegetation and watershed values, and all animals will suffer those consequences.

The BLM has the responsibility to manage the rangelands so as to avoid such catastrophes. One option available to the Bureau is forage allocations through one-point-in-time range surveys. As is clear from recent public response, that option is unworkable, except in a context of drawn-out court battles. To avoid that, current Bureau policy is to initiate intensive monitoring on key areas (RM-2.0) and accomplish necessary animal population adjustments after use of consultation among rangeland interests. In Nevada, the process is called Coordinated Resource Management Planning (CRMP). Under the January 19, 1981 change to the grazing regulations, a balance between forage supply and animal demand should be attained within five years of initial adjustments, assuming the two are well out of balance.

Recent Bureau guidance calls for the use of intensive monitoring and expenditure of public funds and efforts only on those allotments categorized as requiring "intensive" management (I).

Multiple Use Recommendation:

Determine proper stocking rates of domestic livestock on ephemeral-perennial range, desirable numbers of wild horses and burros in herd management areas, and populations of mule deer, bighorn sheep, and elk

Reason:

The monitoring and CRMP systems provide the Bureau the opportunity to make sound resource decisions based on commonly agreed-to resource data and a strong public consultative process. It offers the goal of relatively quick

(Range Management 1.1 continued)

county-wide, through a rangeland monitoring program covering all grazing animals, and the CRMP process. It will be the Bureau's goal to attain the reasonable numbers provided by the Nevada Department of Wildlife. (See Tables RM-1.6, RM-1.7, RM-1.8.) Starting point in FY83 will be existing numbers of wildlife and wild horses and burros, and initial stocking rates of livestock set through CRMP, or through agreement with the allotment operator.

Support Needs:

As stated in MFP 1.

on-the-ground resource use management as opposed to expensive litigation and mutual distrust and acrimony among BLM and its various resource user clients.

Alternatives Considered:

Forage allocation based on range surveys.

Decision:

Modify the MFP II recommendation to read as follows:

Determine proper, long term, stocking rates of domestic livestock on allotments, desirable numbers of wild horses and burros in herd management areas, and populations of mule deer, bighorn sheep, and elk in their existing and potential habitats, based on data gathered through a rangeland monitoring program covering all grazing animals and after employing a coordination and consultation (C&C) process in which all affected interests may take part and which addresses the multiple land use objectives detailed in RM 1.2. It will be the Bureau's goal to provide habitat of sufficient quality and quantity so that the reasonable numbers provided by the Nevada Department of Wildlife (see Tables RM 1.6, RM 1.7, and RM 1.8) can be attained. It will be the Bureau's goal to insure a viable population of healthy free-roaming wild horses and burros in each herd area. This is what is meant by desirable numbers. The initial stocking rate of wild horses and burros purposes will be current numbers of estimated actual population for FY83, as determined by a combination of the following:

Reasons:

One comment stated that using FY83 population levels for wild horse and burro initial stocking rates was arbitrary. The comment stated that 1971 populations or "that which is determined through Coordinated Resource Management Planning" should be used as an initial stocking rate. To use 1971 population estimates would be quite arbitrary, as population estimates were admittedly guesses. No data base was available in 1971. It should be emphasized that neither the Free-Roaming Wild Horse and Burro Act of 1971 nor BLM policy directs managing for 1971 population levels. This is a common misunderstanding. Current Bureau policy is clearly stated in Instruction Memorandum NV-82-305. Current wild horse and burro numbers will be used for monitoring purposes under conditions which exist in Clark County. The memorandum also states: "...the issuance of an MFP/RMP decision does not preclude a primary function of CRMP, i.e., development of implementation strategies. Therefore, if after an MFP/RMP decision is issued the CRMP process recommends an alternative number of wild horses/burros which is acceptable to the Bureau, the CRMP recommendation

(Range Management 1.1 continued)

1. latest Pre-FY 83 aerial census data
2. latest ground census data
3. BLM wild horse and burro specialists' professional judgment

This current number will be reviewed in C&C, and if an alternative number is recommended which is acceptable to the Bureau, it may be used as an initial stocking rate for monitoring purposes.

The initial stocking rate for wildlife will be current numbers of estimated actual population as determined through NDOW census.

Initially livestock grazing will continue based upon grazing applications received and preliminary field determination that supports adequate forage availability prior to issuance of grazing authorizations.

may be used as a starting point for wild horse/burro numbers."

The Range Management 1.1 wording has been changed to specify what will constitute existing numbers and to reflect guidance of this new policy. Note that the initial stocking rate is for monitoring and is not synonymous with population levels the BLM will manage overtime.

Step 3

Recommendation 1.2:

Reclassify the following allotments from ephemeral to ephemeral-perennial range. License no ephemeral use without an ephemeral range inspection.

Virgin Valley Planning Unit:

1. Arrow Canyon
2. Billy Goat Peak
3. Bunkerville
4. Dry Lake
5. Lower Mormon Mesa
6. Mesa Cliff
7. Toquop Sheep
8. Upper Mormon Mesa
9. White Basin
10. (*) Gold Butte
11. (*) Lime Springs
12. Pittman Well***
13. Azure Ridge
14. Mesquite Community

Stateline Planning Unit:

1. Ireteba Peaks
2. Hidden Valley
3. McCullough Mountain
4. Newberry Mountain***
5. Jean Lake
6. South Point
7. Crescent Peak
8. Roach Lake
9. Stump Springs
10. Lucky Strike
11. Wheeler Wash
12. Roses Spring***
13. Spring Mountain**
14. (*) Wheeler Slope**
15. (*) Kyle Canyon***
16. (*) Younts Spring
17. (*) Table Mountain
18. Las Vegas Valley (7777)**

**Unallotted

***Ungrazed since at least 1975

Support Needs:

None

Rationale:

The allotments proposed for ephemeral-perennial classification are those which produce suitable or potentially suitable perennial forage, are generally above 3,200 feet elevation, and receive over 5 inches of precipitation annually. The allotments marked with (*) have neither suitable nor potentially suitable perennial forage production, but have significant acreages exceeding the elevation and precipitation criteria. These allotments also meet the criteria outlined in the special rule for Southwest Desert (ephemeral) Range (BLM Manual 4112.5). Under the ephemeral-perennial classification a grazing preference is established and licensed under the provisions of 43 CFR 4120.2-1. The license specifies kind and number of livestock, periods-of-use, and other pertinent information. Any additional grazing would be authorized in accordance with 43 CFR 4110.3-1(a) when ephemeral forage is produced.

Ephemeral-perennial allotments have vegetation types with the potential to increase perennial forage production if managed properly.

Although Mesquite Community and Azure Ridge allotments would be ephemeral on the Nevada side of the stateline, the bulk of the allotments are in Arizona and will be managed as ephemeral-perennial by the Arizona Strip District.

Spring Mountain, Wheeler Slope, and the Las Vegas Valley are currently unallotted.

REPORT OF THE DIRECTOR BUREAU OF LAND MANAGEMENT

MANAGEMENT OF LAND RESOURCES
IN THE STATE OF TEXAS

The following is a summary of the results of the survey conducted by the Bureau of Land Management in the State of Texas. The survey was conducted in the year 1970 and was designed to determine the status of the land resources in the State. The results of the survey are as follows:

The survey was conducted in the year 1970 and was designed to determine the status of the land resources in the State. The results of the survey are as follows:

(Range Management 1.2 continued)

Multiple Use Analysis

(Includes Lands 1.5, Range Management 1.3 and 1.4, Livestock Grazing 1.2, 1.7, and 1.8, Wildlife 1.16, 1.17, 1.18, 1.22, and 1.25, and Recreation 1.11)

Clark County is a marginal grazing area. This basic fact was officially recognized in 1969 when the ephemeral grazing rule for southwest desert areas, including the county, was established. Although there is some growth of perennial forage in most allotments, it is not sufficient in all of them to warrant anything but the ephemeral characterization.

The reclassification recommendation in MFP 1, Livestock Grazing 1.2, derives from a URA Step 4 table which showed those allotments which the 1979-80 range survey identified as having suitable or potentially suitable animal unit months (AUM), in some cases as few as one. In other cases, such as Hen Springs, there was no showing of suitable or potentially suitable AUMs, but the allotment easily had the majority of acreage exceeding the ephemeral range elevation and precipitation characteristics (see below).

A second method of evaluating possibilities for reclassification was used as an alternative approach. The system, dealing directly with plant composition and density in vegetation types (see URA 3/4), emphasized potential for improvement of perennial plant density under intensive management based on available seed stock on the range and favorable climatic conditions.

For both methods, the allotment, to be a reclassification candidate, would have to lie generally between the 5" and 12" precipitation zones and above 3,200 foot elevation.

Results of the two systems are shown in Table RM-1.2A.

Table 1-1: Results

The data in Table 1-1 show the results of the 1975-76 survey. The data are presented in two columns: the first column shows the results of the 1975-76 survey, and the second column shows the results of the 1976-77 survey.

The data in Table 1-1 show the results of the 1975-76 survey. The data are presented in two columns: the first column shows the results of the 1975-76 survey, and the second column shows the results of the 1976-77 survey.

The data in Table 1-1 show the results of the 1975-76 survey. The data are presented in two columns: the first column shows the results of the 1975-76 survey, and the second column shows the results of the 1976-77 survey.

A second set of data is presented in Table 1-2. This table shows the results of the 1976-77 survey. The data are presented in two columns: the first column shows the results of the 1976-77 survey, and the second column shows the results of the 1977-78 survey.

The data in Table 1-2 show the results of the 1976-77 survey. The data are presented in two columns: the first column shows the results of the 1976-77 survey, and the second column shows the results of the 1977-78 survey.

Results of the two surveys are shown in Table 1-3.

5555 (Indian Springs)	No	No	No
Sunrise Mtn.	No	No	No

Only eight of the allotments meet all three standards, the ones marked by an (*). (However, two, Azure Ridge and Mesquite Community, are located mostly in

(Range Management 1.2 continued)

Arizona, are administered by the Arizona Strip District, and have been classified ephemeral-perennial in that state.) Column one indicates the allotment is currently producing suitable perennial forage, although the amounts range from some 31 AUMs on the Bunkerville allotment to more than 3,000 AUMs in the McCullough Mountains. Column two indicates a potential for improvement, with intensive management, in so far as there appears to be a significant seed source for desirable and intermediate perennial forage. Column three indicates that elevational characteristics and annual precipitation may be sufficient to sustain a good perennial forage base. However, some allotments, such as Roach Lake and Ireteba Peak Mesa, are borderline in this category.

Two allotments, Gold Butte, and Table Mountain, show neither production nor the potential for it. However, it is the professional judgement of both management and range staff that both have potential, if not current production. The judgement is based on physical tours of both allotments, and the rest of the county. In addition, both meet the elevational and precipitation criteria.

Two allotments, Wheeler Wash and Ireteba Peaks, showed significant suitable and potentially suitable perennial forage production in the range survey, but an apparent scarcity of desirable and intermediate perennial plants over the entire allotments. The Wheeler Wash allotment has a great supply of perennial (albeit largely undesirable) forage plants and is situated well above the elevational and precipitation criteria. Livestock grazing on this allotment also has sharp conflicts with wild horses, elk, and recreational uses.

One allotment, Billy Goat Peak; also showed significant suitable and potentially suitable perennial forage production but little apparent potential for improvement based on composition of desirable and intermediate perennial forage plants. It generally is located very close to the lower end of the elevational and precipitation criteria for ephemeral-perennial range. Two others, Hen Springs and Muddy Mountains, showed potential but no production.

One of the allotments which met all three criteria for ephemeral-perennial reclassification, Upper Mormon Mesa, is judged to be in fine condition overall, and generally is at or near its full potential for production. The operators follow a natural grazing system which fits well with the terrain, watering, and vegetation growth patterns in the allotment. As it is operated, the allotment needs little BLM management attention. However, future changes in the grazing system might warrant an AMP development, and there is desert tortoise crucial habitat on the allotment.

Fifteen of the allotments are either unallotted or have had no use shown on them since 1975. Livestock Grazing 1.7 and 1.8 call for both the ephemeral and/or ephemeral-perennial privileges to be made available to the industry. Wildlife 1.17 and 1.18 ask that grazing on these areas not be permitted so that the forage could be used exclusively by wildlife -- mule deer, bighorn sheep, elk, and desert tortoise. In some cases, this would also make more forage officially available to wild horses and burros. Reserving that forage for wildlife could be especially beneficial to the elk on the Spring Mountain Range and to the desert tortoise in some of the valley areas. Bighorn sheep would particularly benefit in the River Mountains where they are strongly dependent on ephemeral forage to make it through the critical summer months. Non-grazing in Las Vegas Valley, Sunrise Mountain, and Indian Springs is

(Range Management 1.2 continued)

supported by Lands 1.5 which urges that course of action because of intense human conflicts. Non-grazing in the 9999 area would benefit the vegetation resource which is now heavily stressed by wild burros. Recreation 1.11, urging the closure of the Red Rock Canyon Recreation Lands to grazing, supports non-grazing in the Spring Mountain allotment.

It does not appear that non-grazing in these fifteen allotments would cause any economic hardships to operators. However, positive benefits could accrue to wildlife, recreationists, and the Las Vegas Valley area.

Both Range Management 1.3 and 1.17 call for establishment and enforcement of periods-of-use on ephemeral-perennial allotments. Range Management 1.3 urges that the periods-of-use be enforced until such time as AMPs or grazing systems can be established. Several of the allotments having potential for ephemeral-perennial grazing have, in effect, yearlong operations. While granting ephemeral-perennial status would be a long-term benefit to the operator, imposition of a strict period-of-use immediately would be a short-term disaster. Operators would have to remove livestock, but most have no place to put them during the off-period.

Most recent BLM rangeland management policy requires allotments to be grouped according to their need for management intensity under a "Selective Management" approach to rangeland administration. In Clark County, those allotments which would be reclassified ephemeral-perennial would require intensive management. Production of perennial forage is marginal, climatic conditions are marginal, soils tend to be harsh, and the competition for forage among livestock, wildlife, and wild horses and burros is strong. If those allotments are to realize their potential, and the hard conflicts resolved, resource condition must be closely monitored and use carefully controlled to reach management objectives.

The ephemeral ranges, on the other hand, have neither production nor potential for improvement. Even though the resource condition is generally fair to poor, management would not be expected to improve it. As long as the ephemeral rule is properly enforced, there should be little or no deterioration of the resource. Management should be custodial in nature with few funds and personnel efforts directed to these allotments.

Continuation of ephemeral classification would deprive those operators of no existing benefits. Reclassification of allotments could provide additional economic benefits to those operators. In addition, a more intensive management logically associated with ephemeral-perennial grazing could benefit other users, such as wildlife and wild horses and burros.

Multiple Use Recommendation:

a. Manage the following allotments for ephemeral-perennial livestock grazing:

*Azure Ridge
Billy Goat Peak
Bunkerville
Crescent Peak
Gold Butte
Hen Springs
Hidden Valley
Ireteba Peaks
Jean Lake

Reason:

It is clear from range survey data, the forage plant density calculations, elevational characteristics, and precipitation, that the allotments proposed for reclassification do meet the requirements for it. Without a complicated recheck of the survey data on the Gold Butte and Crescent Peak

(Range Management 1.2 continued)

Lucky Strike
McCullough Mountain
*Mesquite Community
Muddy Mountains
Roach Lake
Table Mountain
Upper Mormon Mesa
Wheeler Wash
(*Administered by Arizona Strip District.)

Until such time as AMPs or grazing systems are established through CRMP, continue to license grazing on the foregoing allotments under the ephemeral range rule.

b. Continue to manage the following allotments for livestock grazing under the ephemeral range rule:

Acton-Farrier
Arrow Canyon
Black Butte
Christmas Tree Pass
Dry Lake
Flat Top Mesa
Jackrabbit
Lime Springs
Lower Mormon Mesa
Mesa Cliff
Pulsipher Wash
South Point
Stump Springs
Toquop Sheep
Ute
White Basin
Younts Spring

c. License no livestock grazing in the following allotments, reserving them for wildlife, wild horse and burro, and other resource uses:

Glendale
Kyle Canyon
Muddy River
Newberry Mountains
Overton Arm
Pittman Well
Roses Spring
Rox
Spring Mountains
Sunrise Mountain
Wheeler Slope
5555 (Indian Springs)

allotments, it is impossible to explain why they came out negative across the board. However, close examination by experienced range staff and management, calls for the conclusion that there is ephemeral-perennial potential on both allotments. Likewise, Wheeler Wash, Ireteba Peaks, and Billy Goat Peak show sufficient production of suitable perennial forage, and the elevational and precipitation characteristics, to warrant reclassification. However, only Wheeler Wash and Ireteba Peaks demonstrate a reasonable potential for improvement based on composition of desirable and intermediate plants. In addition, the elevation, the abundant precipitation, and the general terrain and soil characteristics in the Wheeler Wash allotment indicate a good potential for successful vegetation manipulation.

Based on potential for improvement and presence of suitable forage, the ephemeral-perennial allotments less Upper Mormon Mesa, Billy Goat Peak, Hen Springs, and Muddy Mountains should receive intensive livestock grazing management. In addition, Wheeler Wash has numerous conflicts which ought to be resolved at the activity plan level. On the other hand, based on the lack of potential, custodial management is warranted for the ephemeral allotments and for Billy Goat Peak. Maintenance management is warranted for Upper Mormon Mesa because of its current good management, fulfilled potential, and fine condition.

Finally, none of these recommendations would offer economic hardship to any operator, including those allotments where grazing use would be discontinued in favor of wildlife or other resource uses. The latter action would, in fact, have positive values for wildlife, for urban areas, and for recreational areas, such as the Red Rock Canyon Recreation Lands.

(Range Management 1.2 continued)
6666(River Mountains)
7777(Las Vegas Valley)
9999(Lake Mead NRA below Eldorado
Mtns.)

d. Ten of the 15 ephemeral-perennial allotments administered by the Las Vegas District should receive intensive management attention with the major share of the material, monetary, and personnel resources allocated to the planning unit dedicated to the monitoring, CRMP, and activity planning and implementation of grazing management on these allotments. These allotments are:

Bunkerville
Crescent Peak
Gold Butte
Hidden Valley
Ireteba Peaks
Jean Lake
Lucky Strike
McCullough Mountain
Roach Lake
Wheeler Wash

The ephemeral allotments, along with Billy Goat Peak, Hen Springs, Table Mountain and Muddy Mountains should receive custodial management attention, with the expenditure of only so much personnel effort and funds as to assure no degradation of resources.

e. As long as the current operation on Upper Mormon Mesa continues, that allotment should receive only maintenance management attention.
f. Management intensity on the Azure Ridge and Mesquite Community allotments will be determined by the Arizona Strip District.

Support Needs:
As stated in MFP 1.

Alternative Considered:
Continue classification of all allotments as ephemeral.

(Range Management 1.2 continued)

Decision

Change the MFP II recommendation to read as follows:

Continue to make the public rangelands in Clark County available for livestock grazing, with the exception of that portion of the Red Rock Canyon Recreation Lands within the Spring Mountain Allotment, and area 6666 (the River Mountains), both of which shall be closed to livestock grazing. Such grazing as is authorized will be consistent with the other multiple land use objectives identified below and associated with individual allotments on Table RM 1.2B.

1. In crucial desert tortoise habitat, assure adequate amounts of spring ephemeral forage are made available to Desert Tortoise.
2. Manage the perennial vegetation resource at proper utilization rate to obtain a sustained yield and to improve livestock forage condition.
3. Provide sufficient habitat to attain and maintain reasonable numbers of bighorn sheep.
4. Where possible, provide water for livestock and wild horses and burros away from riparian habitats which are currently being degraded by excessive use by these animals.
5. Provide grazing systems in allotments containing major desert wash systems so as to relieve overall grazing pressure on the washes.
6. Manage wild burros in the Gold Butte allotment at population levels which will help stabilize the existing vegetation community and help to increase plant diversity.

Rationale:

The multiple use recommendation was reworded in this decision to focus the emphasis on management actions identified to meet identified management objectives rather than classification of range types.

(Range Management 1.2 continued)

Decisions

7. On all allotments, maintain small game habitat conditions that would keep populations as close to wet-year levels as possible.

8. Devise grazing systems and other facilities in the Bunkerville and Christmas Tree Pass allotments which would preclude common use of areas by bighorn sheep and domestic sheep.

Through cooperation and consultation (C&C), allotment-specific management actions (e.g. range improvements, grazing systems, wildlife projects, etc.) will be developed as needed to meet those multiple land use objectives. A specific monitoring plan, developed according to guidance contained in the Nevada Task Force's Monitoring Program, will be used to determine if those objectives are being met.

If it is demonstrated through monitoring that livestock or wild horse and burro grazing use in a given allotment is having an adverse effect on the resources identified in the multiple land use objectives (1-8) above, particularly on crucial bighorn or crucial desert tortoise habitat, then livestock and wild horse and burro grazing use will be modified to the extent necessary to meet those above objectives.

Use a "selective management" approach to rangeland administration. Manage allotments in Clark County at the level of intensity shown in Table RM 1.2B. These categories should be viewed as initial categories and are subject to amendment during C&C should new data indicate the original categorization to be in error.

Introduction

Step 1

Step 3

Recommendation 1.3:

Establish periods-of-use on all ephemeral-perennial allotments in Clark County through CRMP and subsequent development of allotment management plans (AMP) or in conjunction with development of grazing systems. Until such activity planning is accomplished, manage according to the period-of-use shown in Table RM-1.3, allowing for flexibility based on plant phenology caused by annual differences in environmental factors.

Rational:

Current grazing practices are to graze during the beginning of the growing season or yearlong. Grazing in the beginning of the growing season is the most damaging to plants. Pressure on the plant's food reserves, from both initiation of growth and grazing, reduces the plant's vigor and ability to produce seeds. If grazing pressure during this time is continued, plants will continue to lose vigor and reproductive capability. Ultimately, such pressure can eliminate desirable perennial plants. Periods-of-use must be established on all ephemeral-perennial allotments to protect perennial plant species and allow perennial vegetation types the opportunity to complete their life cycles and increase in density.

In Mohave Desert vegetation types, certain environmental factors are very important in regulating the various phenological stages of perennial plants. Some of these factors are precipitation, soil temperature, and air temperature. These factors fluctuate from year-to-year, causing phenological stages to vary as much as two months. Because of this, establishing a set period-of-use is difficult. Flexibility to change a period-of-use from year-to-year must be included. Field examinations will be necessary for determining when important phenological stages of key species are occurring.

The periods-of-use in Table RM-1.3 would insure protection of perennial vegetation until an AMP or grazing system could be implemented. Grazing treatments, determined through an AMP, would then provide the necessary action to protect key species and increase forage production.

Section 1

These forests, over the first
majority of their history, have been
essential characteristics of regional
range. There is no production of
timber or potential timber
potential forest. The majority of the
forests is about 1,000 ft. above
and have relatively mature timber
and the timber is scattered
over.

The timber is (1) 10
matured. These timber are
from 1000 to 1500 ft. above
about at least 1000.

Section 2

These forests are the following
timbered over the first 100
years. These forests (1000
feet) are 1000 ft. above
1,000 ft. and are 1000 ft. above
as matured forest. There is no
potential timber without an essential
range timber.

Recommendation 1.5:

Determine population levels of wild horses and burros in proposed HMAs through a range monitoring system, and the Coordinated Resource Management and Planning (CRMP) process. Manage for existing numbers in 1983. Initiate first adjustments during FY85 and attain balance of use with capacity during FY90.

Support Needs:

Livestock, Wildlife, and Watershed Programs, Public Affairs, funds to accomplish monitoring system.

Rationale:

Monitoring studies, incorporating basic data developed during the 1979 range survey in Clark County, will provide a clear picture of ongoing use of forage, condition of the range, and other data needed to effectively and judiciously manage grazing use over the long term. The CRMP process will assure that the interests of all parties affected by rangeland decisions are considered in reaching those decisions.

See Range Management 1.1 for multiple use analysis and recommendation.

Step 3

Recommendation 1.6:

Starting with current populations in 1983, provide, by 1990, a minimum of 1,918 elk AUMs of perennial forage in the allotments shown below so as to achieve reasonable numbers of elk. Monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to attain the allocation required to support elk reasonable numbers.

TABLE RM-1.6

Big Game Area	Allotment*	Reasonable # AUM Demand
E-1	"8888"	230
	Kyle Canyon	115
	"3333"	115
	Lucky Strike	403
	Spring Mountain	153
	Wheeler Wash	902
TOTAL		1,918

*All allotments are currently ephemeral.

Support Needs:

Range.

Rationale:

Clark County has one of only two populations of elk in Nevada. Section 102 of FLPMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals. BLM Manual section 4111.31A requires consideration of wildlife before determining the amount of forage available to livestock. BLM Manual section 4730.3 authorizes reducing livestock allocations, but not wildlife allocations, to meet horse and burro needs. BLM Manual sections 4111.31D and 4111.32D5c state that allocations will be made to accommodate the needs of a reasonable number of wildlife animals.

See Range Management 1.1 for multiple use analysis and recommendation.

Recommendation 1.7:

Starting with current populations in 1983, provide, by 1990, a minimum of 9,400 bighorn sheep AUMs of perennial forage in current habitat (as shown in Table RM-1.7) so as to achieve reasonable numbers. Monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to attain the allocation required to support bighorn sheep reasonable numbers.

Support Needs:
Range.

Rationale:

Section 102 of FLEMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals. BLM Manual section 4111.31A requires consideration of wildlife demands before determining the amount of forage available to livestock. BLM Manual 4730.3 authorizes reducing livestock allocations, but not wildlife allocations, to meet horse/burro needs. BLM Manual sections 4111.31D and 4111.32D5c state that allocations will be made to accommodate the needs of a reasonable number of wildlife animals.

In addition, the desert bighorn has been designated by BLM as a sensitive species requiring special management consideration, and public interest in this animal has resulted in the formation of the Desert Bighorn Council and the Nevada Fraternity of Desert Bighorn. This management emphasis and public interest further justifies allocating forage to this historic, big game species.

See Range Management 1.1 for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 1.8:

Starting with current populations in 1983, provide, by 1990, a minimum of 5,850 mule deer AUMs of perennial forage in current habitat (as shown in Table RM-1.8) so as to achieve reasonable numbers. Monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to attain the allocation required to support mule deer reasonable numbers.

Support Needs:
Range.

Rationale:

Mule deer distribution is severely restricted in Clark County. Hunter demand far exceeds allowable harvest of present populations in Clark County. Section 102 of FLPMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals. BLM Manual section 4111.31A requires consideration of wildlife demands before determining the amount of forage available to livestock. BLM Manual section 4730.3 authorized reducing livestock allocations, but not wildlife allocations, to meet horse/burro needs.

See Range Management 1.1 for multiple use analysis and recommendation.

Activity Range Management	
Overlay Reference Step 1	Step 3

Recommendation 1.9:

Reserve 200 lbs/acre of ephemeral forage for wildlife forage and vegetation needs before licensing any to livestock.

Support Needs:

Range.

Rationale:

The importance of annuals in the diets of bighorn and tortoises has been documented, as well as the competitive diet overlap between these species and livestock. Annuals are extremely important to quail, too (milkvetch, filaree). Rodents and non-game species use annuals as food sources, cover, and nesting materials. These species, in turn, are prey bases for raptors and coyotes. To maintain the habitat and provide the needs of many wildlife species, annuals should be reserved. Reserving 200 lbs/acre was accepted in the California Desert Plan based on the professional judgement of range conservationists. BLM Manual 4111.32D5c states it is imperative that forage be reserved for wildlife for specific areas for applicable seasons of use, and not merely assigned unit-wide.

BLM Manual 4121.31A.4 states short-term leases can be issued on ephemeral range for those areas where no conflicts exist. BLM Manual 4112.11A.4a states that care must be taken that habitat requirements are met where grazing livestock use the same areas.

Multiple Use Analysis
(Includes Wildlife 1.15, 1.16, 3.5)

Competition for ephemeral forage can have severe impacts on wildlife, particularly in summer habitat. In many bighorn sheep ranges in Clark County, the populations are limited by that forage availability (Wildlife 1.15). The desert tortoise is particularly constrained in terms of population growth by that forage availability (Wildlife 3.5). Reserving annual forage for the desert tortoise, which is listed as "threatened" in its Beaver Dam Slope

habitat by the U.S. Fish and Wildlife Service, would be a positive action by BLM to avoid such drastic action in Clark County. Assuring such forage availability for bighorn sheep which is an extremely important big game animal in Nevada, would have positive benefits to herd sizes. Benefiting that animal would be viewed as a positive action by hunters, sportsmen, and wildlife interests.

Since there is an apparent dietary overlap among wildlife and livestock, reserving such forage prior to licensing livestock use of ephemeral forage would be viewed negatively by livestock operators (Range Management 1.4). While there is the potential for negative impacts in the short run, benefiting important wildlife species now can help avoid more drastic action in the future.

Such forage reservation would also prove helpful to wild burro populations on non-perennial ranges (Wild Horses and Burros 1.1). It would aid in reducing damage to vegetation and watershed resources which those animals can inflict.

To accomplish this forage reservation it would be necessary to conduct range inspections prior to licensing (Range Management 1.2, and 1.4, Wildlife 1.6).

Multiple Use Recommendation:

Modify the recommendation as follows:
In areas of crucial bighorn sheep and desert tortoise habitat, develop, through the CRMP process, an amount of ephemeral forage to be reserved, prior to livestock turnout, to serve the needs of that wildlife population. Conduct necessary field examinations prior to licensing livestock use.

Reason:

Reserving the annual forage for wildlife and other resource needs prior to licensing livestock grazing responds to critical wildlife needs, continues to accommodate livestock grazing, and seeks to avoid more drastic future action in support of critical wildlife such as desert tortoise.

Use of the CRMP process in determining the amount to be reserved will assure that all resource use interests are reflected in setting the allocation.

The amount of forage proposed for reservation -- 200 lbs/acre -- would probably have devastating effects on ephemeral grazing by livestock. Annual per-acre production of ephemeral forage during an average precipitation year in the Stateline Planning Unit was estimated at a range of 10 to 30 lbs/acre in a 1973 study. The same is probably true of the Virgin Valley Planning Unit. Across-the-board reservation of 200 lbs/acre would also ignore the fact that the requirement exists largely in crucial wildlife habitats.

Support Needs:

As stated in MFP I, and CRMP.

Alternatives Considered:

1. Reserve less annual forage.
2. Eliminate spring livestock grazing in critical habitat areas.

(Range Management 1.9 continued)

Decision:

Modify the MFP II recommendation as follows:

Through coordination and consultation, and using monitoring tools, identify habitat needs of wildlife species, particularly desert tortoise and bighorn sheep in their crucial/critical habitats, such as adequate forage, water, cover, etc., and provide for those needs so as to, in time, attain the population goals for those species as mutually agreed to between BLM and NDO (see RM 1.1). Consider these needs and the multiple land use objectives as identified by allotment in RM 1.2 prior to authorizing livestock use on ephemeral range.

Reasons:

Dietary conflicts and cover requirements data is not adequate at this time to require that an exact amount of annual forage be reserved for wildlife. However, needs must be considered prior to licensing livestock grazing of ephemeral forage. The criteria to be used to assure that these habitat needs are being met will be developed through coordination and consultation. These criteria will be continually updated as new information becomes available.

Step 1 Step 3

Recommendation 1.10:

Work with Nevada Department of Wildlife to reintroduce desert bighorn into historic habitat. Allow extension of bighorn distribution into historic habitat where reintroductions are not necessary.

Support Needs:

Nevada Department of Wildlife.

Rationale:

In 1978, the BLM and NDOW cooperatively developed an action plan to maintain bighorn distributions in current habitat and expand bighorn distributions into historic habitat. Reintroduction sites were proposed in several ranges in Clark County. Releases may be needed in the McCullough, Bird Spring, north Spring Mountain, North Muddy, Sunrise, Dry Lake, and Newberry Ranges. Other areas may receive new or increased use through habitat management. Reestablished populations would add to the potential for hunting and high quality sightseeing opportunities. The BLM-NDOW cooperative agreement requires BLM to cooperate with NDOW in transplant programs. NDOW input into Clark County planning recommends reintroducing bighorn into all suitable habitat.

Multiple Use Analysis

(Includes Range Management 1.11, and Wildlife 1.21 and 1.38)

The bighorn sheep is a sensitive species of great interest to a variety of sportsmen, recreationists, and wildlife interests in Southern Nevada (Recreation 2.4 and 2.8). Increased populations in Clark County would be viewed favorably by these groups, particularly in historic areas. Introductions accomplished in the Virgin Mountains in 1978 and 1980 received much favorable media coverage, both locally and regionally.

Increased populations would increase hunting opportunities, which would be a very positive social and economic action since bighorn sheep tags are highly prized (PAA).

Reintroductions, however, will most likely engender new resource conflicts between recreationists (Wildlife 1.3, 1.6), mineral development (Wildlife 1.2, 1.3, 1.5), livestock grazing (Wildlife 1.19, 1.20, 1.21, 1.22, 1.23), and wild horses and burros (Wildlife 1.23, Range Management 1.11). Eliminating or curtailing such conflicting activities would most likely cause a strong negative reaction to the reintroductions. In some cases, such as mineral operations, BLM's ability to mitigate the conflict to the benefit of the sheep is severely curtailed by law.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
FOR THE MOUNTAIN PAINT HORSE

Project Title	Management Framework Plan for the Mountain Paint Horse
Project Number	100-100000-0000
Project Location	Montezuma National Monument, Montezuma, New Mexico
Project Manager	John A. Smith
Project Sponsor	Montezuma National Monument
Project Date	10/1/2000

Section 1.0 Introduction

The purpose of this plan is to provide a framework for the management of the Mountain Paint Horse population within the Montezuma National Monument. This plan is intended to guide the development of a management plan that will ensure the long-term survival and recovery of the population.

Section 2.0 Objectives

The objectives of this plan are to:

1. Establish a baseline for the Mountain Paint Horse population within the Montezuma National Monument.

2. Develop a management plan that will ensure the long-term survival and recovery of the population.

3. Implement the management plan and monitor the results.

4. Report on the progress of the management plan and the results of the monitoring.

5. Revise the management plan as needed to ensure the long-term survival and recovery of the population.

Section 3.0 Management Framework

The management framework for the Mountain Paint Horse population within the Montezuma National Monument is based on the following principles:

- 1. The population is a resource of great value to the Nation and should be managed accordingly.
- 2. The population is a resource of great value to the State of New Mexico and should be managed accordingly.
- 3. The population is a resource of great value to the Montezuma National Monument and should be managed accordingly.
- 4. The population is a resource of great value to the Montezuma National Monument and should be managed accordingly.
- 5. The population is a resource of great value to the Montezuma National Monument and should be managed accordingly.

The management framework for the Mountain Paint Horse population within the Montezuma National Monument is based on the following principles:

1. The population is a resource of great value to the Nation and should be managed accordingly.

2. The population is a resource of great value to the State of New Mexico and should be managed accordingly.

3. The population is a resource of great value to the Montezuma National Monument and should be managed accordingly.

4. The population is a resource of great value to the Montezuma National Monument and should be managed accordingly.

5. The population is a resource of great value to the Montezuma National Monument and should be managed accordingly.

(Range Management 1.10 continued)

Multiple Use Recommendation:

Modify the recommendation as follows:
Accomplish bighorn sheep introductions (and permit natural expansion) into historic habitats shown in Table RM-1.11 only after habitat management plans have been developed identifying and mitigating potential conflicts. Insure adequate public participation, including CRMP if appropriate, is conducted in developing the HMP. Provide forage for reasonable numbers of bighorn sheep identified in the HMP.

Support Needs:

Range, Wild Horses & Burros, Recreation, Nevada Department of Wildlife, CRMP.

Reason:

See the Multiple Use Analysis.

Alternatives Considered:

1. Make no reintroductions.
2. Make introductions into unallotted or ungrazed allotments (see Range Management 1.2).

Decision:

Modify the MFP II recommendation to read as follows:
Accomplish bighorn sheep introductions (and permit natural expansion) into historic habitats shown in Table RM-1.11 only after habitat management plans (HMP) or release site descriptions (RSD) have been developed identifying and mitigating potential conflicts. Insure adequate coordination and consultation is conducted in developing the HMP/RSD. Provide sufficient quantity and quality of habitat for reasonable numbers of bighorn sheep identified in the HMP/RSD.

Reasons:

One comment stated that requiring the development of habitat management plans before allowing the introduction of bighorn sheep into historic habitats would not allow the flexibility needed to accomplish introductions in a timely manner. In response, the BLM agrees. The decision now reads that a release site description can be used for this purpose without requiring a completed HMP. This will allow introductions to be accomplished in a timely manner when reintroduction stock is available.

Step 1

Step 3

Recommendation 1.11:

As reintroduction or habitat expansion of bighorn sheep occurs into historic habitat, provide, at a minimum, the bighorn sheep perennial forage identified in Table RM-1.11 so as to achieve reasonable numbers of the animal. Along with reintroduction or habitat expansion, monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to obtain the allocation required to support bighorn sheep reasonable numbers.

Support Needs:

Range.

Rationale:

Section 102 of FLMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals. BLM Manual section 4111.31A requires consideration of wildlife demands before determining the amount of forage available to livestock. BLM Manual 4730.3 authorizes reducing livestock allocations but not wildlife allocations, to meet horse/burro needs.

BLM and NDCW have cooperatively identified the opportunity to expand bighorn into all historic habitat.

In addition, the desert bighorn has been designated by BLM as a sensitive species requiring special management consideration. Public interest in this animal has resulted in the formation of the Desert Bighorn Council and the Nevada Fraternity of Desert Bighorn. This management emphasis and public interest further justifies allocating forage to this historic, big game species.

See Range Management 1.10 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Range Management

Objective Number
RM-2

Objective 2.0:

Monitor use of range resources by all foraging animals to provide data needed to balance range use to range capacity.

Rationale/Multiple Use Analysis

This objective replaces Livestock Grazing Objective 2.0, and incorporates Livestock Grazing recommendations 3.1, 3.2, 3.3, and 3.4. To effectively manage the public rangelands for "multiple use" and "sustained yield," as required by the Federal Land Policy and Management Act of 1976, it is essential that the manager be constantly aware of the utilization rate, condition, and trend of the vegetation resources. Concurrently, he requires up-to-date information on the numbers and condition of all range vegetation users (livestock, wild horses and burros, and wildlife) to ascertain the changing sources of the demand. In addition to those two factors, the managers must be aware of such competitive elements between different classes of animals as dietary overlap, habitat usage, and water requirements. An effective monitoring program, intelligently designed to illustrate each of these areas, will provide the manager, and the public, the data necessary to make resource allocation decisions, if necessary, among competing range users - to bring demand in balance with supply.

Monitoring, of course, is an expensive effort. It would be wise, therefore, to concentrate monitoring efforts on those areas where the resource management need is most intensive or where the existing conflicts are most severe. At the same time, the program should be flexible, deleting monitoring in areas where it is no longer needed, initiating it when problems arise.

In 1980, a multi-agency task force led by the Extension Service of the University of Nevada, Reno, developed a monitoring system for rangelands which was intended as an agreed-upon minimum system. Managers can initiate additional studies to provide needed information. BLM adopted that system for use state-wide. The system is intended for use in conjunction with the CRMP process.

A monitoring program would not engender resource conflicts, although it will certainly illustrate them. It would have a high value to competing resource interests -- to the degree they were involved in monitoring -- in that it would provide a common, jointly-arrived-at data base on which to make necessary resource allocation decisions. It would serve BLM by expediting resource management decisions by largely eliminating arguments over data adequacy.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Objective 1.1

Identify and of range resources in all locations within the study area and develop a management plan for each range.

Background Information for Analysis

This objective requires a review of the range resources in the study area and the development of a management plan for each range. The range resources are identified in the range resource inventory (RRI) and the range resource assessment (RRA). The RRI is a list of all range resources in the study area, including their location, extent, and condition. The RRA is a report that describes the range resources in the study area and provides a management plan for each range. The RRI and RRA are developed by the range resource inventory team (RRI team) and the range resource assessment team (RRA team). The RRI team is responsible for identifying and describing the range resources in the study area. The RRA team is responsible for assessing the range resources in the study area and developing a management plan for each range. The RRI and RRA are developed by the range resource inventory team (RRI team) and the range resource assessment team (RRA team). The RRI team is responsible for identifying and describing the range resources in the study area. The RRA team is responsible for assessing the range resources in the study area and developing a management plan for each range.

Identifying of range resources is an expensive effort. It would be more efficient to develop a management plan for each range based on the range resource inventory (RRI) and the range resource assessment (RRA). The RRI and RRA are developed by the range resource inventory team (RRI team) and the range resource assessment team (RRA team). The RRI team is responsible for identifying and describing the range resources in the study area. The RRA team is responsible for assessing the range resources in the study area and developing a management plan for each range.

In 1988, a multi-agency task force led by the Extension Service of the University of Nevada, Reno, developed a management plan for range resources. The plan was intended to provide a framework for the management of range resources in the study area. The plan was developed by the range resource inventory team (RRI team) and the range resource assessment team (RRA team). The RRI team is responsible for identifying and describing the range resources in the study area. The RRA team is responsible for assessing the range resources in the study area and developing a management plan for each range.

A management plan for range resources would be developed by the range resource inventory team (RRI team) and the range resource assessment team (RRA team). The RRI team is responsible for identifying and describing the range resources in the study area. The RRA team is responsible for assessing the range resources in the study area and developing a management plan for each range. The RRI and RRA are developed by the range resource inventory team (RRI team) and the range resource assessment team (RRA team). The RRI team is responsible for identifying and describing the range resources in the study area. The RRA team is responsible for assessing the range resources in the study area and developing a management plan for each range.

(Range Management 2.0 continued)

Multiple Use Recommendation:

Accept the objective as written. Conduct monitoring studies on rangelands requiring intensive management or where severe conflicts exist. Assure all grazing ungulates, and sensitive species such as desert tortoise, are monitored by the program. Assure related animal data (numbers, competitive uses) is gathered. Use the state-wide system as a system base.

Reason:

The monitoring program is required to effectively support good range management and to give a sound data base for BLM management decisions regarding resource allocations where necessary.

Decision:

Accept the objective as written.

Reason:

One comment requested that planning areas for forage management (which will provide for the recovery of forage) be established. This concept is identical to that of the key management areas which are used as the focal point of the monitoring studies referred to in this objective. Key management areas are identified by allotment. These areas are studied with the objective of maintaining or improving the forage resource.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Livestock Grazing
Objective Number
LG-1

Objective 1.0:

Manage grazing of the Federal range in Clark County for an optimum yield of forage for use by domestic livestock.

Rationale:

Livestock grazing on public land has occurred in Clark County since the late 1800s. Livestock grazing is the main agricultural use for the Federal lands since lack of water and poor soils make cultivation impractical. Management is needed to obtain the best possible yield of livestock forage to meet the demands of livestock grazing, while assuring that the forage continues to be available on a sustained yield basis. Although climatic conditions result in a smaller per-acre yield than other regions, the fragility of the ecosystem warrants good management to preserve a continuous, useable forage base.

Regulation of livestock grazing on Federal range first occurred under the Taylor Grazing Act of 1934. Grazing in Clark County is conducted under 43 CFR 4100 which provides the basic guidance for range administration. Additional Congressional guidance is provided in the Federal Land Policy and Management Act of 1976 (P.L. 94-579) and the Public Rangeland Improvement Act of 1978 (P.L. 95-514).

Multiple Use Analysis

The objective, as written, generally reflects a balanced approach to livestock grazing as one of several resource uses. It would be more reflective of FLPMA guidance were the "optimum" yield changed to "sustained" yield.

Multiple Use Recommendation:

Modify the objective to read: Manage grazing of the Federal range in Clark County for a sustained yield of forage for use by domestic livestock.

Decision:

Accept the objective as modified in MFP II.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Livestock Grazing
Overlay Reference	
Step 1	Step 3

Recommendation 1.1:

Determine proper stocking rates of domestic livestock on ephemeral-perennial allotments through a range monitoring system, and the Coordinated Resource Management and Planning (CRMP) process. Use CRMP to establish initial stocking rate for grazing year 1983. Initiate first adjustments during FY85 and attain balance of use with capacity during FY90.

Support Needs:

Wild Horse & Burro, Wildlife, and Watershed Programs, Public Affairs, funds to accomplish monitoring system.

Rationale:

Monitoring studies, incorporating basic data developed during the 1979 range survey in Clark County, will provide a clear picture of ongoing use of forage, condition of the range, and other data needed to effectively and judiciously manage grazing use over the long term. The CRMP process will assure that the interests of all parties affected by rangeland decisions are considered in reaching those decisions.

Recommendation changed to Range Management 1.1.

Step 1 Step 3

Recommendation 1.2:

Reclassify the following allotments from ephemeral to ephemeral-perennial range. License no ephemeral use without an ephemeral range inspection.

Virgin Valley Planning Unit:

1. Arrow Canyon
2. Billy Goat Peak
3. Bunkerville
4. Dry Lake
5. Lower Mormon Mesa
6. Mesa Cliff
7. Toquop Sheep
8. Upper Mormon Mesa
9. White Basin
10. (*) Gold Butte
11. (*) Lime Springs
12. Pittman Well***
13. Azure Ridge
14. Mesquite Community

Stateline Planning Unit:

1. Ireteba Peaks
2. Hidden Valley
3. McCullough Mountain
4. Newberry Mountain***
5. Jean Lake
6. South Point
7. Crescent Peak
8. Roach Lake
9. Stump Springs
10. Lucky Strike
11. Wheeler Wash
12. Roses Spring***
13. Spring Mountain**
14. (*) Wheeler Slope**
15. (*) Kyle Canyon***
16. (*) Younts Spring
17. (*) Table Mountain
18. Las Vegas Valley (7777)**

**Unallotted

***Ungrazed since at least 1975

Support Needs:

None

Rationale:

The allotments proposed for ephemeral-perennial classification are those which produce suitable or potentially suitable perennial forage, are generally above 3,200 feet elevation, and receive over 5 inches of precipitation annually. The allotments marked with (*) have neither suitable nor potentially suitable perennial forage production, but have significant acreages exceeding the elevation and precipitation criteria. These allotments also meet the criteria outlined in the special rule for Southwest Desert (ephemeral) Range (BLM Manual 4112.5). Under the ephemeral-perennial classification a grazing preference is established and licensed under the provisions of 43 CFR 4120.2-1. The license specifies kind and number of livestock, periods-of-use, and other pertinent information. Any additional grazing would be authorized in accordance with 43 CFR 4110.3-1(a) when ephemeral forage is produced.

Ephemeral-perennial allotments have vegetation types with the potential to increase perennial forage production if managed properly.

Although Mesquite Community and Azure Ridge allotments would be ephemeral on the Nevada side of the stateline, the bulk of the allotments are in Arizona and will be managed as ephemeral-perennial by the Arizona Strip District.

Spring Mountain, Wheeler Slope, and the Las Vegas Valley are currently unallotted.

(Livestock Grazing 1.2 continued)

Recommendation changed to Range Management 1.2.

Step 1	Step 3

Recommendation 1.3:

Establish periods-of-use on all ephemeral-perennial allotments in Clark County through CRMP and subsequent development of allotment management plans (AMP) or in conjunction with development of grazing systems. Until such activity planning is accomplished, manage according to the period-of-use shown in Table LG-1.3, allowing for flexibility based on plant phenology caused by annual differences in environmental factors.

Rationale:

Current grazing practices are to graze during the beginning of the growing season or yearlong. Grazing in the beginning of the growing season is the most damaging to plants. Pressure on the plant's food reserves, from both initiation of growth and grazing, reduces the plant's vigor and ability to produce seeds. If grazing pressure during this time is continued plants will continue to lose vigor and reproductive capability. Ultimately, such pressure can eliminate desirable perennial plants. Periods-of-use must be established on all ephemeral-perennial allotments to protect perennial plant species and allow perennial vegetation types the opportunity to complete their life cycles and increase in density.

In Mohave Desert vegetation types certain environmental factors are very important in regulating the various phenological stages of perennial plants. Some of these factors are precipitation, soil temperature, and air temperature. These factors fluctuate from year to year, causing phenological stages to vary as much as two months. Because of this, establishing a set period-of-use is difficult. Flexibility to change a period-of-use from year-to-year must be included. Field examinations will be necessary for determining when important phenological stages of key species are occurring.

The periods-of-use in Table LG-1.3 would insure protection of perennial vegetation until an AMP or grazing system could be implemented. Grazing treatments, determined through an AMP, would then provide the necessary action to protect key species and increase forage production.

(The word "nothing" is written)

is something that is not a thing

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	
Clark County	
Activity	
Livestock Grazing	
Overlay Reference	
Step 1	Step 3

Recommendation 1.4:

Through the CRMP process, develop AMPs on the following allotments.

Virgin Valley Planning Unit

1. Bunkerville
2. Gold Butte
3. Billy Goat Peak
4. White Basin

Stateline Planning Unit

1. Ireteba Peaks
2. Hidden Valley
3. McCullough Mountain
4. Jean Lake
5. Wheeler Wash

Support Needs:

Wildlife, Wild Horses and Burros.

Rationale:

AMPs will provide maximum natural improvement of native forage species by providing a high level of management intensity. A "given" in the process is that the needs of the forage plants improvements involved in the AMP will assist in meeting management objectives. A grazing system developed specifically for each allotment should provide uniform distribution of livestock over the allotment.

An AMP should not be developed for the Spring Mountain or Wheeler Slope allotments until such time as they are allotted.

Multiple Use Analysis

(Includes Watershed 4.6, Wildlife 2.1, 2.2, 2.3, 2.6, 2.7, and 3.7, and Cultural Resources 1.1 and 1.9)

Activity plans are intended to guide specific resource uses in specific areas. Among other aims, such plans should resolve local-level conflicts.

Recommendations came from Wildlife (2.7, 2.6, 2.2, 2.1, 2.3, 3.7), Wild Horses and Burros (1.3), Cultural Resources (1.9, 1.1), Watershed (4.6), and Recreation (1.3, 1.5, 2.9, 2.10, 1.2, 1.8, 1.6, 5.1). Many of these proposals deal with the same area and involve conflicting resources. For example there are to be written for the general Virgin Mountain area plans for desert tortoises, bighorn sheep, livestock (domestic sheep included) grazing, and recreation. The potential for conflict among those four uses is enormous, yet none of the plans, as proposed, would be developed concurrently. Virgin Mountain, in fact, has a current bighorn sheep/domestic sheep conflict which resulted largely from such non-coordinated actions by different resource programs.

Several competing resource use activities are aimed at the Spring Mountain Range. Under Recreation Objective 5.0 it was determined that recreation would be the primary use in that area.

The grazing allotments identified for intensive management changed as a result of the multiple use analysis in Range Management 1.2. Allotment Management plans are to be written in the following allotments: Wheeler Wash, Gold Butte, Bunkerville, McCullough Mountain, Hidden Valley, Ireteba Peaks, and Jean Lake.

UNITED STATES DEPARTMENT OF THE INTERIOR BUREAU OF LAND MANAGEMENT

MANAGEMENT PLAN
FOR THE LANDS OF THE BUREAU OF LAND MANAGEMENT

1. Purpose and Scope

The purpose of this plan is to provide a framework for the management of the lands of the Bureau of Land Management, and to establish the following principles:

2. Management Principles

1. The lands of the Bureau of Land Management are to be managed for the benefit of the people of the United States.
2. The lands of the Bureau of Land Management are to be managed in a manner that is consistent with the public interest.
3. The lands of the Bureau of Land Management are to be managed in a manner that is consistent with the needs of the future generations.
4. The lands of the Bureau of Land Management are to be managed in a manner that is consistent with the needs of the present generations.

3. Management Objectives

1. To provide for the sustainable use of the lands of the Bureau of Land Management.
2. To provide for the conservation of the natural resources of the lands of the Bureau of Land Management.
3. To provide for the protection of the cultural resources of the lands of the Bureau of Land Management.
4. To provide for the protection of the historic resources of the lands of the Bureau of Land Management.

4. Management Strategies

The following strategies are proposed for the management of the lands of the Bureau of Land Management:

5. Management Actions

The following actions are proposed for the management of the lands of the Bureau of Land Management:

1. To provide for the sustainable use of the lands of the Bureau of Land Management.

2. To provide for the conservation of the natural resources of the lands of the Bureau of Land Management.

3. To provide for the protection of the cultural resources of the lands of the Bureau of Land Management.

4. To provide for the protection of the historic resources of the lands of the Bureau of Land Management.

5. To provide for the protection of the natural resources of the lands of the Bureau of Land Management.

6. To provide for the protection of the cultural resources of the lands of the Bureau of Land Management.

7. To provide for the protection of the historic resources of the lands of the Bureau of Land Management.

8. To provide for the protection of the natural resources of the lands of the Bureau of Land Management.

9. To provide for the protection of the cultural resources of the lands of the Bureau of Land Management.

10. To provide for the protection of the historic resources of the lands of the Bureau of Land Management.

(Livestock Grazing 1.4 continued)

Multiple Use Recommendation:

Modify the recommendation as follows: Develop and implement the activity plans identified for the county. If at all possible, combine efforts into a single coordinated plan. Failing that, insure separate plans on the same area are totally coordinated. In the Spring Mountain Range above the 5,000 foot elevational contour, all activity plans will be coordinated with and subordinated to recreation plans. AMPs will be developed for the following allotments: Wheeler Wash, Gold Butte, Bunkerville, McCullough Mountain, Hidden Valley, Ireteba Peaks, and Jean Lake. Table LG 1.4 suggests a planning sequence which may be used if funding and other constraints permit.

Support Needs:

All activities.

Reason:

Proper multiple use management requires a totally coordinated effort of all programs.

Alternative Considered:

Do activity planning for single resource interests only.

Decision:

Accept the MFP II recommendation to be modified as follows:

Develop and implement the activity plans identified for the county, insuring separate plans on the same area are totally coordinated. In the Spring Mountain Range above the 5000-foot elevational contour, all activity plans will be coordinated and consistent with recreation plan objectives. AMPs or grazing systems will be developed for the following allotments: Wheeler Wash, Gold Butte, Bunkerville, McCullough Mountain, Hidden Valley, Ireteba Peaks, and Jean Lake. Table LG-1.4 suggests a planning sequence which may be used if funding and other constraints permit.

Reason:

"Grazing systems: was added following "AMPs" because the level of management on some of the allotments listed will not likely require an AMP. Return on investments would probably limit some of these allotments to grazing system levels of management. One comment was made on Table LG 1.4 that indicated some confusion existed over the term "CRMP" - it was believed to mean Coorindated Resource Management Planning. However, in this table "CRMP" means Cultural Resource Management Plan, so a footnote has been added to the table to clarify this.

GRAZING SYSTEM

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	
Clark County	
Activity	
Livestock Grazing	
Overlay Reference	
Step 1	Step 3

Recommendation 1.5:

Through the CRMP process, review the Crescent Peak AMP and evaluate its success in meeting its range management objectives. Revise the plan as necessary. Complete the review and adjustment during FY84.

Support Needs:

CRMP, Wildlife and Watershed programs.

Rationale:

Crescent Peak is the only allotment in Clark County with an AMP. Approved in 1972, the plan was fully implemented, except for a pipeline project, in 1974. The operator has often stated that he feels the plan is too complex. Over the seven-year life of the plan, a data base has been acquired through monitoring to facilitate the review process.

Multiple Use Analysis
(Includes Wildlife 1.26)

The Crescent Peak AMP has been in operation since 1972. A significant amount of data has been gathered to support an evaluation. In addition, the operator has experienced some difficulties and has requested this analysis. There are no conflicts, and Wildlife 1.26 supports the recommendation. Wildlife is concerned that conflicts with livestock be resolved.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

An evaluation of this AMP is needed to insure that proper management is being accomplished. Enough data has been collected to determine if the AMP objectives are being met, identify any conflicts with wildlife, and if Bureau standards are being met.

Support Needs:

As stated in MFP 1.

Alternative Considered:

No evaluation or revision of the AMP.

Decision:

Through a coordination and consultation process, review the Crescent Peak AMP and evaluate its success in meeting its range management objectives. Revise the plan as necessary. Complete the review and adjustment during FY84.

Step 1

Step 3

Recommendation 1.6:

Continue to manage the following allotments under the Special Rule for Southwest Desert Ranges (Federal Register, Vol. 33, No. 238, December 7, 1968, and BLM Manual 4112.5), i.e., as ephemeral range. License no ephemeral use without an ephemeral range inspection.

Virgin Valley Planning Unit

1. Hen Springs
2. Muddy Mountains
3. Acton-Farrier
4. Muddy River**
5. Flat Top Mesa
6. Glendale**
7. Jackrabbit
8. Overton Arm**
9. Pulsipher Wash
10. Rox**
11. Ute
12. 9999 (on LMNRA below Gold Butte)*

Stateline Planning Unit

1. Christmas Tree Pass
2. Black Butte
3. 6666 (River Mountains)*
4. 5555 (Indian Springs)*
5. Sunrise Mountain*

* - Unallotted

** - Ungrazed since at least 1975

Rationale:

These allotments, over the great majority of their acreage, demonstrate essential characteristics of ephemeral range. There is no production of suitable or potentially suitable perennial forage. The majority of the allotment is below 3,200 ft. elevation and known rainfall patterns indicate less than eight inches is received per year.

The allotments with (*) are unallotted. Those with (**) have not been licensed for livestock grazing since at least 1975.

Recommendation changed to Range Management 1.4.

Step 1

Step 3

Recommendation 1.7:

Dispose of ephemeral forage on all unallotted areas in Clark County through an annual two-week simultaneous application period each January. Award licensing privileges on each unallotted area for the grazing year beginning the following March 31 under 43 CFR 4110.3-1 and 4110.5. Successful applicants would be granted temporary non-renewable licenses during the year as annual forage became available.

Virgin Valley Planning Unit

1. "9999" (South of Gold Butte, LMNRA)

Stateline Planning Unit

1. Wheeler Slope
2. Spring Mountain
3. Roses Spring
4. "5555" (Indian Springs)
5. Sunrise Mountain
6. "7777" (Las Vegas Valley)
7. "6666" (River Mountains)

Support Needs:

Range Inspections, Advertisements, Coordination with adjacent land management agencies.

Rationale:

There are currently eight unallotted areas in Clark County. Ephemeral production on these areas can total as much as 1,500 lbs/acre of usable forage, which is available to livestock. These areas should be made available to any interested person in the livestock business. 43 CFR 4110 and 43 CFR 4110.3 provide the mechanism for disposal of such additional forage.

Successful applicants would be required to provide their own waters.

Licensing privileges would be offered annually on Spring Mountain and Wheeler Slope only until they were permanently adjudicated (see Livestock Grazing 1.9), when the allotment operator would be entitled to use of the ephemeral forage there.

See Range Management 1.2 for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 1.8:

Offer the perennial grazing privileges on the following allotments for permanent adjudication to qualified members of the livestock industry in FY84.

1. Spring Mountain
2. Roses Spring
3. Wheeler Slope
4. Las Vegas Valley

Support Needs:

Advertisement, Adjudication process.

Rationale:

The privileges on the Spring Mountain and Roses Spring allotments have been unallotted for several years. The Nevada Division of State Parks acquired the base property for the Spring Mountain allotment when it purchased the Spring Mountain Ranch. The base property for the Roses Spring allotment is owned by a private corporation. Neither the Division or the corporation are in the livestock business, and are not, therefore, qualified applicants for the privileges. The Wheeler Slope operator lost his privileges in the early 1970s when it was found his offered base property waters did not service the allotment. While perennial forage is found in the Valley, there has been no grazing there for several decades. All areas have enough suitable perennial forage plants present to warrant reclassification as ephemeral-perennial range. Adjudication of the perennial grazing privileges would provide effective use of the forage resource in accordance with the grazing regulations. Before adjudicating the privileges, the applicant must comply with 4110.2-1(a) regarding ownership or control of base property.

See Range Management 1.2 for multiple use analysis and recommendation.

Step 1	Step 3

Recommendation 1.9:

Remove, by 1986, wild horses and burros from all allotments in Clark County where they are present.

Support Needs:

Palomino Valley Horse Capture Crew.

Rationale:

Wild horses and burros are direct competitors for forage use with livestock. Continued growth of the population of these feral animals, estimated at 18% per year, will heighten the competition, causing either range damage or reduced livestock use of forage. In some use areas identified as ephemeral ranges, such as Gold Butte, Ireteba Peaks, and White Basin, use is already occurring where perennial forage is insufficient to support yearlong grazing pressure. Continued yearlong use pressure would not permit improvements anticipated for livestock grazing forage.

See Wild Horse and Burro 1.1 for multiple use analysis and recommendation.

Overlay Reference

Step 1

Step 3

Recommendation 1.10:

Initiate modified suppression efforts on wildfires in those areas where fire would be beneficial for the livestock forage resource. Refer to MFP 1 Overlay.

Rationale:

Wildfires could be very beneficial in certain vegetation types throughout Clark County. Many undesirable plant species are destroyed by fire, reducing competition with more desirable plant species and improving range condition as the more desirable species increase.

See Fire 2.1 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Livestock Grazing
Objective Number
LG-2

Objective 2.0:

Encourage and assist the range users to develop new livestock management facilities and to improve existing management facilities as an aid to maintaining or improving range condition and trend.

Rationale:

Livestock management facilities, such as fences, water developments, and corrals, are needed to achieve good livestock management. Without these management facilities, livestock would continue deteriorating range resources. To achieve proper management as described in the Federal Land Policy and Management Act (FLPMA) (P.L. 94-579) Sec. 102(a)(8), and Public Rangeland Improvement Act (PRIA) (P.L. 95-514) Sec. 2(b)(2), new management facilities must be developed and existing facilities must be improved.

Multiple Use Analysis

The objective is consistent with the laws cited as well as the Taylor Grazing Act of 1934.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Livestock Grazing

Overlay Reference

Step 1

Step 3

Recommendation 2.1:

Develop a maintenance schedule that will bring all range improvements to good operating condition by 1990. Where the range improvement is not maintained, identify and curtail the benefit intended to accrue to the allotment as a result of the improvement.

Support Needs:

Division of Operations.

Rationale:

Many management facilities have not been maintained, making these facilities no longer useable. Management facilities are located throughout the area and are important for control of livestock and uniform livestock distribution. If proper management is to be achieved, maintenance of existing facilities must be completed to keep facilities in good condition.

Range users must be encouraged to maintain and repair those facilities they are responsible for. Range users and the range forage will benefit from these facilities only if these facilities are in good condition.

Multiple Use Analysis

(Includes Wildlife 1.24, 1.33, and 1.36)

Maintenance is needed to correct deficiencies or to repair many range improvements in Clark County. Often, certain benefits accrue to the operator, such as increased grazing use, based on the presence of the improvement. Wildlife recommendation 1.33 indicates the need for escape devices for birds and small animals in about 70 existing troughs or tanks. Wildlife recommendation 1.24 identifies six existing fences which are presently hindering wildlife movement. Unless proper installation of new projects is accomplished, considering other resource values including wildlife, wild horses and burros, and recreation, such projects may create new conflicts.

Multiple Use Recommendation:

Develop a maintenance schedule that will bring all range improvements to good operating condition and on regular maintenance schedules by 1990. Include those existing improvements identified in Wildlife recommendations 1.24 and 1.33 that need to be corrected. Where maintenance is not

Reason:

This multiple use recommendation would insure that the investment in existing range improvements is not lost. At the same time, existing deficiencies in range improvements (particularly water developments and fences) which do not conform to established BLM

(Livestock Grazing 2.1 continued)

accomplished, curtail or eliminate the benefit accruing from the improvement.

Support Needs:

Division of Operations, Nevada
Department of Wildlife.
guidelines can be corrected.
Conflicts among different resource
uses on future improvements would be
reduced.

Alternatives Considered:

None

Decision:

Modify the MFP II recommendation to
read as follows:

By the end of FY 84 transfer
maintenance of all range improvement
projects to the benefiting
person/corporation.

Future improvements will be
coordinated with other resource
interests (including Nevada Department
of Wildlife) to alleviate potential
conflicts.

Future water developments should be
designed to include escape devices and
other facilities (drinkers) which will
be constructed concurrently.

Future fences will be built to
applicable wildlife specifications in
BLM Manual 1737.

Reason:

Under newly developed range policy,
virtually all project maintenance is
to be assigned to the benefiting
party.

Step 1

Step 3

Recommendation 2.2:

Encourage and assist range users in developing new water sources (other than base waters), maintaining existing water facilities, and using pipelines to improve livestock distribution. A list of such projects is in Table LG-2.2.

Support Needs:

Sites will be determined after field examinations, archeological clearances, and proper reports have been filed.

Rationale:

Water is the major limiting factor affecting livestock distribution in this area. Many water facilities have been allowed to deteriorate and are no longer dependable water sources.

These unusable water facilities, along with those areas which are not serviced by water, have caused livestock to overuse areas around dependable water. This results in degradation of the vegetation resource in those areas.

Forage is available in many areas but is never used due to lack of water. By developing new water sources and repairing existing waters, proper distribution and uniform utilization can be achieved. This will improve range conditions and permit increased production in those areas where increased production is possible.

See Wildlife 1.35 for multiple use analysis and recommendation.

Note: Attach additional sheets, if needed

(Instructions on reverse)

TABLE LG-2.2

PROPOSED RANGE IMPROVEMENTS IDENTIFIED BY CLARK COUNTY RANGE USERS

Christmas Tree Pass:

- Install water haul at Deep Well
- Install water haul at Battleaxe Well
- Install water haul at Coast Guard Loran Station
- Pipe water across U.S. Highway 93 from CalNevAri to present water haul site
- Redrill Juniper Well
- Install 2-3 miles of pipeline from Cottonwood Spring

Ireteba Peaks:

- Drill a well to replace service area of the 3 water hauls on the east side of U.S. Highway 93
- Install 3-4 miles of pipeline from Desert Queen Well south
- Build 28 miles of fence in Eldorado Valley along east side of U.S. Highway 93

Jean Lake:

- Improve McClanahan South Well
- Improve flow of Granite Springs
- Improve flow of Scotts Well Spring
- Install 1 mile of pipeline south from Jean Lake well
- Install pipeline 2-3 miles west from Calada Well
- Redrill old wells at millsite
- Build 5-6 miles of fence across Jean Lake

Kyle Canyon:

- Improve base waters to produce 300 gallons per AUM.

McCullough Mountain:

- Fence the east side of U.S. Highway 93 to Railroad Pass
- Install 2 miles of pipeline north from 10 Mile Well with 2 troughs
- Build a reservoir halfway between Searchlight and 10 Mile Well
- Install 1 mile of pipeline from mining claim in Crescent Peak allotment to a point 3.5 miles west of Little Well
- Make a holding corral in the Brewer Well area
- Build 4 miles of fence from west slope of the North Highland Range to the McCullough Range

Upper Mormon Mesa:

- Install approximately 4 miles of pipeline from Upper Mormon Mesa Well
- Restore Reservoir #2 which was abandoned.

Bunkerville:

- Install 8 miles of pipeline from Key West to the Black Ridge area
- Water haul north of Virgin River

Flat Top Mesa:

- Install a new well which would service the entire allotment

Crescent Peak:

- Increase storage at Cripple Jack Well
- Install another trough at 6 Mile Pipeline
- Drill a well in Monday Basin in California
- Develop water from CalNevAri
- Extend a pipeline from the YKL pipeline to replace the service area of Jack's Well

Table Mountain:

-Build 2 miles of fence at Goodsprings. Install 2 double cattleguards and 1 single cattleguard.

Table 1. Summary of results of the study. The results are presented in the following table. The results are presented in the following table. The results are presented in the following table.

Division of Operations

Rationale:

Improved access to many areas would benefit both range users and BLM personnel. Many roads throughout Clark County have deteriorated, making travel slow and dangerous in some cases. Properly maintained roads would reduce the time and difficulty needed to reach many areas. BLM personnel would be able to inspect those areas which are currently inaccessible; range users would also be able to reach these areas, making livestock management easier.

Multiple Use Analysis
(Includes Watershed 3.5)

All roads in Clark County, which are under BLM administration and have been identified by BLM for access and maintenance, are repaired and/or upgraded on an as-needed basis as funding permits.

There are seemingly endless miles of roads on BLM administered lands, not maintained by BLM or other entities, which have not been identified for inclusion into the system of BLM maintained roads. The maintenance or improvement of many of these roads may not be advantageous or cost-effective.

Multiple Use Recommendation:

Drop the recommendation.

Reason:

All BLM identified and managed access roads are already maintained, as funding permits, as a matter of policy and standard operating procedure.

Decision:

Accept the MFP II recommendation.

Step 1

Step 3

Recommendation 2.4:

Encourage and assist range users in constructing fences and other projects where needed to improve management. See Table LG-2.2.

Support Needs:

Archeological investigations for each project, engineering assistance (layout and design), contract preparation for BLM projects.

Rationale:

Fences are needed to control livestock movements between and within allotments and to attain more uniform livestock distribution. Uniform livestock distribution patterns will improve utilization over the area and improve range condition in those areas where improvement is feasible.

Permittees must be encouraged to construct facilities on the allotments on which they have grazing permits.

The permittees will receive the most benefit from the facilities constructed on the allotments.

Multiple Use Analysis

Fences and range projects, such as corrals, are important livestock management tools. Principal conflicts for fences are with wildlife, wild horses and burros, and recreationists. Wildlife can be cut off from important habitat by fences. Ranging patterns of wild horses can also be interrupted. Recreationists, when blocked from certain areas by thoughtlessly constructed fences, sometimes will cut the fence, destroying its usefulness.

Multiple Use Recommendation

Accept the recommendation as written with the addition of the following: Insure the preservation of normal wild horse distribution and movement patterns. Construct all fences to meet wildlife standards.

Reason

Livestock management tools should not interfere with other resource uses.

Support Needs:

As stated in MFP 1.

Decision:

Modify the MFP II recommendation to read as follows:

Encourage and assist range users in constructing fences and other projects where needed to improve management. Specific proposed range improvements which have been identified by Clark County range users during this

Alternative Considered:

Construct no fences.

Reason:

Decisions on specific projects identified in Table LG 2.2 cannot be made without a discussion of feasibility, projected funding, and priority ranking which will occur in CRMP.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)	Clark County
Activity	Livestock Grazing
Objective Number	LG-3

Objective 3.0:

Initiate a studies program to provide data on a continuing basis which will enable the Bureau to more efficiently manage the range resource.

Rationale:

The Federal Land Policy and Management Act (FLPMA) directs the Bureau to "maintain on a continuing basis an inventory of range conditions." The Public Rangelands Improvement Act, Sections 2(b) and 4(a), provide similar guidance. Studies must be established which will allow the Bureau to monitor the range resources and use the data collected to properly manage these resources. There are no current studies on ephemeral ranges for determining turn-out dates, annual stocking rates, and condition and trend. A program must be adopted to gather the data necessary for making these vital management decisions.

Multiple Use Analysis

A studies program is a basic management tool needed to properly allocate resources among users. However, a more complex monitoring program, which addresses all rangeland foragers, is needed.

Multiple Use Recommendation:

Delete this objective. See Range Management Objective 2.0.

 MANAGEMENT PLAN
 100-100000-100000-100000

The purpose of this plan is to provide for the management of the land and resources within the 100-100000-100000-100000 area. The plan is based on the following assumptions:

1. The land is owned by the United States.
 2. The land is to be managed for the benefit of the public.
 3. The land is to be managed in accordance with the principles of sustainable development.

Approved: _____
 Date: _____

This plan is subject to the following conditions:

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Livestock Grazing
Overlay Reference	
Step 1	Step 3

Recommendation 3.3:

Set up the forage production inventory process on vegetation types representative of Clark County.

Rationale:

The forage production inventory method determines the amount of forage produced by the amount of moisture an area receives. Data gathered from this method can be used to determine the amount of usable forage produced in different vegetation types. Based on this data, decisions can be made on the proper stocking levels of livestock in both ephemeral and perennial types to insure that overuse of forage does not occur.

Combined with Range Management Objective 2.0. This recommendation should be retained at MFP 1 and Range Management Objective 2.0 brought forward to MFP 2.

Note: Attach additional sheets, if needed

(Instructions on reverse)

Step 1	Step 3

Recommendation 3.4:

Establish and maintain large (five acre) exclosures for study plots to be used as comparison areas for observation of effects of management.

Support Needs:

Sites for study exclosures will be determined through the CRMP process, and field examinations.

Rationale:

Exclosures are an accurate means of determining if management objectives are being accomplished. By excluding livestock these areas will remain undisturbed and proceed in a natural succession to climax vegetation. These areas can be monitored to observe successional change. Upon evaluation of vegetation change, management objectives and procedures are subject to change.

Combined with Range Management Objective 2.0. This recommendation should be retained at MFP 1 and Range Management Objective 2.0 brought forward to MFP 2.

State of New York
 Department of Conservation
 Division of Forest Management
 Albany, New York
 May 1, 1962

UNITED STATES

 RECOMMENDATION OF THE DESIGN

The following are the suggested means of
 determining if management objectives
 are being accomplished. By utilizing
 checklist these areas will remain
 undisturbed and proceed in a natural
 manner to follow vegetation.
 These areas can be monitored in
 future management changes. Upon
 evaluation of vegetation change,
 management objectives and procedures
 are subject to change.

Recommendation 1.4:
 The design and maintenance of the
 forest resources for study areas to be
 used as comparison areas for
 observation of effects of management.

Report 1.4:
 This for study resources will be
 designed through the design process,
 and field observations.

Consistent with Forest Management Objective 1.4, this recommendation should be
 included in the 1 and 2 and 3 and 4 and 5 and 6 and 7 and 8 and 9 and 10 and 11 and 12

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)	Clark County
Activity	Wild Horses & Burros
Objective Number	WHB-1

Objective 1.0:

Manage wild, free-roaming horses and burros in those areas on public lands in Clark County where the animals were found on the date of passage of the Wild, Free-Roaming Horse and Burro Act of December 15, 1971 (P.L. 92-195).

Rationale:

Wild, free-roaming horses and burros can be managed only in those areas which were utilized as all or part of the habitat of these animals on December 15, 1971 (43 CFR 4730.5). Aerial inventories, with both helicopters and fixed-wing aircraft, were conducted in 1973, 1974, and 1975. The information from these inventories was used to determine the areas used by the wild horses and burros as all or part of their habitat on December 15, 1971.

Multiple Use Analysis

It is probably difficult, if not impossible, to accurately determine where the animals were located in 1971 with any degree of accuracy. Bureau regulations call for management of "desirable" numbers of animals as part of the ecology of the public lands. As with wildlife, permitted expansion of habitat or its reduction, should be by management decision based on resolved resource conflicts.

Multiple Use Recommendation:

Modify the objective as follows:

Manage desirable numbers of wild, free-roaming horses and burros in four areas of public lands in Clark County.

Decision:

Accept the objective as modified in MFP II.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Wild Horses & Burros

Overlay Reference

Step 1

Step 3

Recommendation 1.1:

Manage wild horse and burro populations in Clark County within the boundaries of the following Herd Management Areas (HMA):

1. Gold Butte, including Grand Wash Cliffs, Arizona
2. Muddy Mountains (including Bitter Spring Valley and Black Mountains)
3. Spring Mountain Range
4. Eldorado Mountains
5. Lower Meadow Valley Wash

Support Needs:

Further inventories, population dynamics studies, Horse Management Area Plans, and coordination with the livestock and wildlife habitat management programs.

Rationale:

Herd Management Areas are designations of specific areas of land which have definite boundaries for management purposes. Present information indicates horses and/or burros were found in these areas on December 15, 1971. Areas 1, 2, 3, and 4 are ones within Clark County where the animals could sustain themselves within established use patterns and could be managed as a unit with reference to a sustained yield of the forage resource. The Lower Meadow Valley Wash population is a herd whose principal range is in the Caliente Planning Unit and should be properly managed as a Lincoln County group.

Multiple Use Analysis

(Includes Livestock Grazing 1.9, Wild Horses and Burros 1.3, and Wildlife 1.29)

The Bureau policy is to manage wild horses and burros where they are found on public lands, comparably with other resource values (43 CFR 4700.0-6(c)). The areas described in the above recommendation are those locations in Clark County where the animals are currently found.

A principal conflict with wild horses and burros is forage competition with livestock (Range Management 1.2 and 1.4, and Livestock Grazing 1.9) and with wildlife, particularly bighorn sheep (Wildlife 1.29). Water, in dry areas, is also a prime item of competition. The competition would presumably be most critical on ephemeral ranges.

(Wild Horses and Burros 1.1 continued)

Since horses and burros are not ruminants, they must consume more forage to meet nutrition and energy demands. The larger consumption rates can have serious consequences for the competing animals as well as the watershed resource. In fact, Watershed 4.5 calls for alteration of grazing patterns to enhance watershed values in areas now suffering degradation.

Wild horses and burros continue to have a high social value for many Americans, nationwide. Withdrawal of animals from existing ranges, without concurrent reduction of other grazers and firm evidence of severe resource damage, would meet strong resistance. Range Management recommendations (1.1, 1.6, 1.9, 1.10, 1.11, and 1.12) call for monitoring range uses and use of the CRMP process before initiating adjustments in grazing animals.

Herd Management Area Plans (Wild Horses and Burros 1.3) are useful in identifying conflicts and resolving them. A plan for the Gold Butte area is now under preparation by the Arizona Strip District. This plan is particularly timely because reintroduced bighorn sheep in the Virgin Mountain area are expanding their habitat southward.

Multiple Use Recommendation:

Manage wild horses and burros in four herd management areas in Clark County: Gold Butte, Muddy Mountains, Spring Mountain Range, Eldorado Mountains. Do not eliminate wild horses and burros from any Herd Management Areas unless justified through monitoring and coordinated through the CRMP process. Develop Herd Management Area Plans (HMAP) in the following priority: Gold Butte (FY83), Spring Mountains (FY85), Muddy Mountains (FY87), and Eldorado Mountains (FY89). Insure such activity plans are developed concurrently with other resource activity plans. In particular assure that the Gold Butte HMAP is fully integrated and coordinated with the Virgin Mountain HMP during FY83.

Support Needs:

As stated in MFP 1.

Reason:

Management of wild horses and burros should begin with existing numbers in existing ranges until a firm basis for adjustments can be attained through providing a commonly-agreed upon data base, and sufficient public consultation on the issues can assure the Bureau of general concurrence with its ultimate setting of desirable numbers and management schemes.

The Lower Meadow Valley Wash herd should be considered and managed as an extension of the Lincoln County herd.

Alternative Considered:

Elimination of wild burros from the Gold Butte area.

Since 1945 and 1946, the number of birds has increased, but the number of nests has decreased. The number of eggs per nest has also decreased. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0.

The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0.

The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0.

Discussion of the Results

The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0.

Conclusions

The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0. The number of eggs per nest has decreased from 1.5 to 1.0.

Wild Horses and Burros 1.1 continued

Decision:

Modify the MFP II recommendation to read as follows:

Manage wild horses and burros in four herd management areas in Clark County: Gold Butte, Muddy Mountains, Spring Mountain Range, Eldorado Mountains. Initial management numbers will be FY 83 population levels. Populations should be adjusted, if warranted, based on data generated through monitoring process. Do not eliminate wild horses and burros from any Herd Management Areas unless supported by monitoring data and the proposal reviewed by interested parties through a coordination and consultation process. Develop Herd Management Area Plans (HMAP) as outlined in Wild Horses and Burros 1.3 on a schedule appropriate to funding and manpower constraints. Insure such activity plans are developed concurrently with other resource activity plans. In particular, assure that the Gold Butte HMAP is fully integrated and coordinated with the Virgin Mountain HMP.

Insure that wild horse and burro habitat as well as the animals are managed in a manner designed to realize the multiple land use objective shown in Table RM 1.2B.

Reasons:

It was felt to be necessary to add an explanation on population levels. One comment received for WH&B 1.1 suggested that BLM implement a mode of management using waters to ensure that animals remain in a close, supervised habitat. Such a management scheme would interfere with the animals' free-roaming nature, as discussed in the Wild Horse and Burro Act.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wild Horses & Burros
Overlay Reference	
Step 1	Step 3

Recommendation 1.2:

Determine population levels of wild horses and burros in proposed HMAs through a range monitoring system, and the Coordinated Resource Management and Planning (CRMP) process. Manage for existing numbers in 1983. Initiate first adjustments during FY85 and attain balance of use with capacity during FY90.

Support Needs:

Livestock, Wildlife, and Watershed Programs, Public Affairs, funds to accomplish monitoring system.

Rationale:

Monitoring studies, incorporating basic data developed during the 1979 range survey in Clark County, will provide a clear picture of ongoing use of forage, condition of the range, and other data needed to effectively and judiciously manage grazing use over the long term. The CRMP process will assure that the interests of all parties affected by rangeland decisions are considered in reaching those decisions.

Recommendation changed to Range Management 1.5.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wild Horses & Burros
Overlay Reference	
Step 1	Step 3

Recommendation 1.3:

Develop Herd Management Area Plans (HMAPs) in the following priority and as scheduled:

- a. Gold Butte (FY83)
- b. Spring Mountains (FY85)
- c. Muddy Mountains (FY87)
- d. Eldorado Mountains (FY89)

Support Needs:

Livestock and Wildlife programs;
public involvement.

Rationale:

After designating Herd Management Areas, the authorized officer shall develop a wild free-roaming horse/burro management plan (43 CFR 4730.5). Management plans are necessary to outline a) specific objectives through management of the horses/burros, b) techniques for maintaining/improving habitat and health of the animal population, c) needed management facilities, and d) monitoring studies to evaluate the effectiveness of management techniques in meeting the plan's objectives.

HMAP priority development schedule is based on the number of animals in the HMA, accessibility for viewing, and present or potential damage to the environment or to the animals themselves.

The HMAP for the Lower Meadow Valley Wash area should be developed as part of the plan for the Lincoln County herd.

See Wild Horse & Burro 1.1 for multiple use analysis and recommendation.

Step 1	Step 3

Recommendation 1.4:

Insure water remains available for wild horses/burros at those water sources in HMAs where wild horse/burro use has been identified.

Support Needs:

Livestock operators, wildlife waters managers.

Rationale:

Water sources have been identified throughout the planning area. Horses/burros have been using all available waters within the areas proposed for HMAs. Water is the most critical element necessary for survival of these animals. A change in availability of water at any source within an HMA could jeopardize the continued good health of the horse/burro populations dependent on these water sources.

See Wildlife 1.35 for multiple use analysis and recommendation.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	
Clark County	
Activity	
Wild Horses & Burros	
Overlay Reference	
Step 1	Step 3

Recommendation 1.5:

Cancel domestic horse grazing privileges in the Muddy Mountains allotment.

Support Needs:

Livestock management program; grazing decision.

Rationale:

This area has been recognized as a wild burro area. Domestic horses were first licensed in this area in the mid-1950s. Burro use apparently pre-dates that introduction. Eliminating domestic horse use would prevent the exchange of disease between wild and domestic animals and prevent undue harassment of the wild animals during periodic gatherings of domestic animals pursuant to a grazing license.

Multiple Use Analysis

The operator in the Muddy Mountains allotment licenses several working horses with his livestock to avoid having to transport the animals from home base to the allotment each time he visits his herd. Use of the allotment this way does present the conflicts cited, albeit they are minor.

Multiple Use Recommendation:

Drop the recommendation at this time in favor of addressing during the CRMP process.

Reason:

The problem is not so overwhelming that it can't wait a coordinated solution working with the operator in CRMP.

Decision:

Accept the MFP II recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)	Clark County
Activity	Wild Horses & Burros
Objective Number	WHB-2

Objective 2.0:

Improve habitat for wild, free-roaming horses/burros in the designated Herd Management Areas.

Rationale:

Habitat improvement is needed to enhance the existence of the horses and burros in their present habitat, to allow for increases in population, to prevent having to move animals or reduce the populations, and to limit competition with native wildlife species and domestic livestock in areas where all the animals are found and heavy use of vegetation can occur.

Multiple Use Analysis

This objective is consistent with Bureau policy set in regulations regarding these animals. Habitat improvement actions would benefit not only the animal, but the resource base it depends on.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

State of New York
County of Albany
City of Albany
Wild Birds & Fishes
Conservation
1911-12

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT PLAN (1911-12)
ACTIVITY SUMMARY

Section 1. The purpose of this plan is to provide for the management of the land owned by the United States in the State of New York, and to provide for the conservation of the natural resources thereof.

Section 2. The land owned by the United States in the State of New York is divided into three classes, to-wit: (a) land owned by the United States in fee simple; (b) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York; and (c) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York, and to the right of the State of New York to take possession of the land at any time.

Section 3. The land owned by the United States in the State of New York is divided into three classes, to-wit: (a) land owned by the United States in fee simple; (b) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York; and (c) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York, and to the right of the State of New York to take possession of the land at any time.

Section 4. The land owned by the United States in the State of New York is divided into three classes, to-wit: (a) land owned by the United States in fee simple; (b) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York; and (c) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York, and to the right of the State of New York to take possession of the land at any time.

Section 5. The land owned by the United States in the State of New York is divided into three classes, to-wit: (a) land owned by the United States in fee simple; (b) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York; and (c) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York, and to the right of the State of New York to take possession of the land at any time.

Section 6. The land owned by the United States in the State of New York is divided into three classes, to-wit: (a) land owned by the United States in fee simple; (b) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York; and (c) land owned by the United States in fee simple, but subject to a right of reversion to the State of New York, and to the right of the State of New York to take possession of the land at any time.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wild Horses & Burros
Overlay Reference	
Step 1	Step 3

Recommendation 2.1:

Initiate controlled burns in Lovell Canyon, Trout Canyon, Lovell Wash, Wallace Canyon, and Wheeler Canyon areas, for habitat improvement. Use modified suppression on fires from natural causes, such as lightning, in the Spring Mountains, Bird Spring Range, and in the Gold Butte area. Seed burned areas with suitable forage species. Identify specific areas and acreages through HMAPs.

Rationale:

Controlled burns are the most economical and "cleanest" method to remove vegetation not used by grazing animals. A burn does not usually remove all vegetation from an area, so some shelter and hiding cover normally remains. Seeding quickens the recovery of the range (as opposed to allowing the burn to revegetate naturally), and reduces soil loss from erosion.

Support Needs:

Forestry, Fire Management, Wildlife, Livestock Grazing.

See Fire 2.1 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wild Horses & Burros
Overlay Reference	
Step 1	Step 3

Recommendation 2.2:

Chain/seed or plow/seed selected sites on the more level ridge-tops and sides near Lovell Wash, Wallace Canyon, Wheeler Pass, and Lovell Canyon.

Support Needs:

Wildlife, Division of Operations,
Livestock Grazing.

Rationale:

Vegetation in some of these areas is too sparse to "carry" a fire, but must be removed in order to let forage species recover and reproduce. Some sites must be seeded, because no preferred forage species to furnish a seed source are present. Seeding will quicken recovery of the range and reduce soil loss from wind and water erosion.

Multiple Use Analysis
(Includes Watershed 4.7)

Mechanical treatments (chaining, plowing) for manipulation and/or removal of vegetation can be used as a tool for opening spaces or as a preliminary to reseedling of preferred forage species in low production areas, thus providing feed for wild horses and burros in the Spring Mountains. Benefits to the watershed resource in the area would also be realized through recovery of range vegetation and reduction of soil loss from erosion. Specific watershed improvements could also be realized (Watershed 4.7, 4.5). Mechanical treatments which would eventually serve to attract grazing animals to an area should be limited to areas of moderate or better erosion condition classes.

Recreation is recognized as the priority resource for management in the Spring Mountains and any mechanical treatment undertaken in this area should be coordinated with and subordinated to recreation. In Wilderness Study Areas (WSAs) interim management policy is in effect and land use activities will have to be closely coordinated accordingly.

Chemical treatments (Watershed 4.7) are also effective vegetation manipulation tools. However, the opportunities are great for undesirable side effects occurring in downstream waters and wildlife populations. With the limited waters and habitat present in Clark County, such side effects could be truly devastating.

(Wild Horse and Burros 2.2 continued)

Multiple Use Recommendation:

Allow mechanical treatments for vegetation manipulation throughout Clark County. Determine areas to be treated through activity plans (HMP, AMP, etc.), and assure that the treatment serves multiple use purposes. Do not use chemical treatments in Clark County. Consider use of watershed tillage and water control facilities in activity planning for watershed improvements.

Any treatments in the Spring Mountain Range must be coordinated with and subordinated to the recreation program there.

Support Needs:

Same as MFP I.

Reason:

Mechanical treatments, when properly applied, can serve a wide variety of purposes to enhance the overall ecological condition and production of an area. The risk of long-term adverse effects on a relatively small habitat area warrant a decision not to use chemical treatments in Clark County.

Alternatives Considered:

1. No mechanical treatments county-wide.
2. No mechanical treatments in the Spring Mountain Range.

Decision:

Modify the MFP II recommendation as shown:

Allow mechanical treatments for vegetation manipulation throughout Clark County. Determine areas to be treated through activity plans (HMP, AMP, etc.), and assure that the treatment serves multiple use purposes. Chemical treatments may be used, if it is clearly demonstrated there are no undesirable side effects on habitat. Consider use of watershed tillage and water control facilities in activity planning for watershed improvements.

Any treatment in the Spring Mountain Range must be coordinated with and consistent to the recreation program there.

Reason:

Further consideration of the chemical treatment reveals the MFP II recommendation is prohibiting a potentially cost-efficient process. The decision requires that complete safety to wildlife habitat be demonstrated prior to use.

Wild Horse and Bitter T. E. continued

Also mechanical treatments for vegetation management throughout Clark County. Burens are to be treated through activity plans (WHP, etc.), and ensure that the treatment is multiple use purposes. Do not use chemical treatments in Clark County. Consider use of watershed ridge and water control facilities in activity planning for watershed improvements.

For treatment in the Spring Mountains Range must be coordinated with and coordinated to the restoration program.

Spring Mountains Range

Spring Mountains Range

- 1. No mechanical treatments in the area.
- 2. No mechanical treatments in the area.

Spring Mountains Range

Wildly the WHP II recommendation as shown. Also mechanical treatments for vegetation management throughout Clark County. Burens are to be treated through activity plans (WHP, etc.), and ensure that the treatment is multiple use purposes. Do not use chemical treatments in Clark County. Consider use of watershed ridge and water control facilities in activity planning for watershed improvements.

For treatment in the Spring Mountains Range must be coordinated with and coordinated to the restoration program.

Spring Mountains Range

Further consideration of the chemical treatment reveals the WHP II recommendation is prohibiting a potential vegetation management program. The decision requires that complete safety to wildlife habitat be demonstrated prior to use.

Step 1	Step 3

Recommendation 2.3:

Close the present Blue Diamond sanitary landfill site. Require fencing of all future landfill sites with burro-proof fences, to prevent injury or death to the animals.

Support Needs:

Lands.

Rationale:

The landfill site is presently in trespass. Burros have been known to step in tin cans and have the cans slide over the hoof and become stuck. As the bottom of the can wears off, the can slips onto the leg of the animal, which can cause injury to the animal's feet and legs, and possible death.

Poisonous or noxious substances can also be left at the landfill sites which may prove fatal to the animals.

Multiple Use Analysis

The Las Vegas District is currently working with Clark County on relocation of the Blue Diamond dumpsite. Revised stipulations on dumpsite leases will provide for greater protection to wild horses and burros. These include:

1. Mandatory fencing of all landfill sites.
 2. Mandatory clean-up of all sites.
-

Multiple Use Recommendation:

Policy is presently in effect. Drop recommendation.

Reason:

As cited in the Multiple Use Analysis.

Decision:

Accept the MFP II recommendation.

Step 1

Step 3

Recommendation 2.4:

Develop water sources to make AUMs, which occur outside of current water-serviced areas, available to wild horses/burros.

Support Needs:

Division of Operations, archeologist, hydrologist, contract specialist.

Rationale:

Development of water would allow more uniform use of forage throughout the designated HMAs, by making "out-of-service-area" AUMs available for grazing.

See Wildlife 1.35 for multiple use analysis and recommendations.

REPORT OF THE
COMMISSIONER OF THE STATE
DEPARTMENT OF LAND MANAGEMENT
ON THE
MANAGEMENT OF THE STATE
LANDS

The Commission on the Management of the State Lands, created by Chapter 108 of the Laws of 1897, has the honor to submit herewith its report. The Commission has the pleasure to announce that it has completed its study of the subject and has formulated its recommendations. The Commission believes that the present management of the State Lands is not satisfactory and that certain changes are necessary to bring it into line with the best practice. The Commission's recommendations are set forth in the accompanying report.

The Commission believes that the present management of the State Lands is not satisfactory and that certain changes are necessary to bring it into line with the best practice. The Commission's recommendations are set forth in the accompanying report.

Step 1	Step 3

Recommendation 2.5:

Cooperate with National Park Service
to fence the airstrip at Echo Bay.

Support Needs:

Division of Operations.

Rationale:

Although the airstrip is several miles inside the Lake Mead National Recreation Area boundary, assistance in this project by BLM would provide protection to the burros, which we manage jointly.

The burros in this area have become accustomed to air traffic and could wander onto the airstrip during aircraft landing or take-off operations, causing injury to humans and/or the animals themselves.

Multiple Use Analysis

The Bureau is responsible for the well-being of all wild burros on public lands regardless of whether or not they roam over private or National Park Service boundaries. A potential hazard exists where burros have unrestricted access to the Echo Bay Airstrip. Fencing of the boundary around the airstrip would restrict this access and eliminate the potential hazard.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

Wild burros are protected by Federal law and efforts should be made to ensure their safety on the public domain.

Support Needs:

Same as MFP I.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Wildlife

Objective Number

WL-1

Objective 1.0:

Provide and maintain sufficient quantity and quality of food, water, cover, and space to satisfy the demands of all wildlife species utilizing habitats in Clark County through habitat improvement, protection, and proper vegetation allocation. Special emphasis should be given to Federal- and State-classified or BLM-identified sensitive species.

Rationale:

It is BLM policy to maintain a maximum diversity of wildlife species in sufficient numbers to meet public demand, through consideration of the welfare and habitat requirements of all wildlife and through provision of essential requirements of wildlife (BLM Manual Section 1603.12D1 and 1603.12D3a). BLM policy states: "The essential requirements of wildlife--food, cover, and water--will be maintained so as to provide optimum edge effect and interspersions of habitat components in important wildlife areas." It is also mandated by the Federal Land Policy and Management Act of 1976 (FLPMA) to provide food and habitat for fish and wildlife. To insure the well-being of wildlife, and thereby meet an ever-increasing public demand for consumptive uses, it is the responsibility of the BLM to provide for optimum habitat of all wildlife species. WO Instruction Memorandum 80-225, January 15, 1980, outlines the appropriate legislation and mandates that apply to the above objective.

Multiple Use Analysis

The objective is reflective of Bureau policy and Congressional guidance in FLPMA (Sec. 102(a)(8)). It provides for the concerns associated with a key natural resource on the public lands.

Multiple Use Recommendation:

Modify the objective as follows:

Provide and maintain sufficient quantity and quality of food, water, cover, and space to satisfy the demands of all wildlife species using habitats on public land in Clark County. Give special emphasis to Federal- and State-classified species and to BLM- identified sensitive species.

Decision:

Accept the objective as modified in MFP II.

Reasons:

One comment expressed a concern that wildlife get a fair share in the allocation of both ephemeral and ephemeral-perennial forage. The objective adequately addresses this concern.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Wildlife

Overlay Reference

Step 1

Step 3

Recommendation 1.1:

During development of all activity plans special attention will be given to protecting riparian zones as wildlife habitat and to protecting associated native flora.

Support Needs:

All activities.

Rationale:

Riparian zones are crucial sources of biological diversity providing at least a portion of the basic habitat components required for survival of many species. However, recreationists, miners, livestock, horses, and burros are drawn to these areas too. Overuse leads to loss of habitat for wildlife, loss of native flora, erosion, degradation of water quality, and decreased water quantity.

Multiple Use Analysis
(Includes Watershed 3.3)

Principal conflicts with this recommendation arise from such activities as livestock grazing, construction, mineral exploration, wild horse and burro use, and similar uses. Protection of the riparian habitat is supported by recommendations Watershed 3.3 and Wildlife 1.32, which urge protection of this resource.

Multiple Use Recommendation:

Accept recommendations as written except develop limitations for surface disturbing activities on a case-by-case basis depending on the nature of the impacts. See Recreation 6.4 for ORV limitations.

Reason:

Given the scarcity of riparian zones in Southern Nevada, special attention is warranted. Judgements on specific surface disturbing activities would best be left to a case-by-case analysis.

Support Needs:

As stated in MFP 1.
Consultation with allotment operator.

Alternatives Considered:

1. Prohibit all non-wildlife activities in riparian habitat.
2. Fence all such zones.

Decision:

Accept the MFP II recommendation as written, so as to read:
During development of all activity plans, give special attention to protecting riparian zones as wildlife habitat and to protect associated native flora. Develop limitation for surface disturbances activities on a case-by-case basis depending on the nature of the impacts.

Reasons:

One comment stated that all fencing of riparian habitat should be done in conjunction and cooperation with livestock operators, especially when water rights are involved. In response, a statement on mandatory coordination with livestock operators has been added to the support needs listing; although this coordination is a normal procedure when dealing with waters, the additional statement was added for clarification.

Note: Attach additional sheets, if needed

(Instructions on reverse)

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Wildlife

Overlay Reference

Step 1

Step 3

Recommendation 1.2:

Allow no new mineral leases in crucial bighorn summer habitat. Oil and gas exploration and development and new mining, sand, and gravel operations should be prohibited in the vicinity of lambing habitat during the lambing season and in crucial summer habitat yearlong. All mining, and oil and gas operators should be required to effectively close roads in bighorn habitat, which they have created or upgraded, during periods of non-use and after completion of the operation.

Support Needs:

Minerals.

Rationale:

Mining and similar activities may force sheep to avoid areas which may be valuable to them as lambing habitat, escape cover, or sources of food or water. Accompanying road development can increase chances of off-road vehicle, sightseeing, and hiking activities in bighorn habitat, thereby adding to the potential for bighorn disturbance. Mining operations can result in habitat destruction and loss of forage.

See Minerals 1.1 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (NFP)	
Clark County	
Activity	
Wildlife	
Overlay Reference	
Step 1	Step 3

Recommendation 1.3:

Individual, seismic, mineral, and competitive off-road vehicle (ORV) use should be restricted to existing roads, trails, and washes in bighorn habitat. Competitive events should be prohibited May 1 through September 30 in crucial bighorn summer habitat, January 1 through April 30 in the vicinity of lambing habitat, and throughout bighorn habitat during the hunting season (generally mid-November to mid-December). No competitive events should be allowed in historic bighorn sheep ranges for three years following reintroductions of bighorn into these ranges.

Support Needs:

Recreation, Minerals.

Rationale:

ORV activity can lead to harassment and poaching of sheep, can keep bighorn away from waters, and can cause a loss of forage due to habitat destruction. Restricting ORV use should reduce the severity of these problems. Allowing competitive ORV events along existing roads, trails, and washes should reduce encounters between sheep and ORVs while minimizing habitat degradation. Seasonal closures should reduce stress during critical periods and afford hunters a singular, undisrupted hunting experience. Closures of ranges for three years following reintroductions should allow the sheep to adjust to their new territory and establish social stability. Harassment during this adjustment period could result in habitat abandonment.

Temporary closures are authorized by 43 CFR 8364.1.

See Recreation 6.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	
Clark County	
Activity	
Wildlife	
Overlay Reference	
Step 1	Step 3

Recommendation 1.4:

Prohibit new road or trail construction within elk habitat on the Spring Mountains.

Support Needs:

All programs.

Rationale:

Ever-increasing use by the general public is adversely affecting the limited elk population in the Spring Mountains. Approximately 135 miles of existing roads already transect elk habitat, reducing available forage for big game and other wildlife.

Increased human use which would occur with more roads displaces elk through competition for space. It also results in increased poaching which is particularly detrimental to low level populations.

Multiple Use Analysis
(Includes Wildlife 1.5 and 3.3)

Wildlife recommendations 1.4, 1.5, and 3.3 all recommend prohibiting or limiting new road or trail construction in important wildlife habitat. Allowing new road construction under the rights-of-way program (transmission lines, natural gas lines, other non-mineral needs) would be a discretionary action of the BLM. New road construction associated with mineral, and oil and gas exploration and development is less controllable. The surface management regulations (43 CFR 3809) give BLM the responsibility to require and oversee the reclamation of lands disturbed by mining activities. In advance of such activities, BLM has an opportunity to review mining plans of operation and recommend changes to plan elements. BLM has a similar opportunity to review or seek changes in plans to conduct oil and gas geophysical work under 43 CFR 3045.

Similar concerns with construction on public lands are expressed in Watershed 4.5 in areas of high erosion hazard.

Both Lands 3.4 and Minerals 1.2 urge that there be no actions taken that would preclude access to rights-of-way, withdrawals, leases, etc., and to mineralized areas. Livestock 2.3 calls for upgrading and maintenance of all BLM managed roads in the county to facilitate ranching operations.

Recreational developments in the Spring Mountain Range (Recreation 5.1) could require new or upgraded roads to provide safe access to new areas.

(Wildlife 1.4 continued)

Multiple Use Recommendation

Modify the recommendation to read:

1. Encourage all users of public lands to travel existing roads or trails in crucial wildlife habitats described in Wildlife recommendations 1.4, 1.5, and 3.3.
2. Where possible, new road or trail construction should be avoided in the described crucial wildlife habitat.
3. Coordination with mineral or geophysical companies that plan road construction within the crucial habitat should be accomplished to mitigate the adverse impacts that would occur as a result of such construction.
4. Where new roads or trails are constructed to support a temporary activity, the builder will refer the road to BLM for disposition prior to project's end.

Reason

It is impossible to prohibit all road construction. Prohibition of all road construction allows no opportunity for mitigation that may result from coordination with mineral resource development companies. Referring newly constructed roads to BLM for disposition on temporary projects would provide the manager an opportunity to retain a road which might serve multiple-use purposes.

Support Needs:

As stated in MFP I.

Alternative Considered:

None

Decision:

Accept the MFP II recommendation as written.

UNITED STATES

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	
Clark County	
Activity	
Wildlife	
Overlay Reference	
Step 1	Step 3

Recommendation 1.5:

No new, permanent roads or trails should be established in crucial bighorn summer habitat.

Support Needs:

All activities, especially Lands and Minerals.

Rationale:

As with mining operations, lands activities may force sheep to avoid valuable habitat and forage or water resources. Road development may add to the potential for bighorn disturbance and loss of habitat. While disturbance can be a problem throughout bighorn habitat, disturbance in crucial habitat may be significantly limiting for bighorn populations. BLM Manual 6511.21B states special care must be taken to insure that road and trail construction does not cause deterioration or loss of habitat, or cause physical hazard to wildlife.

See Wildlife 1.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP):	Clark County
Activity	
Wildlife	
Overlay Reference	
Step 1	Step 3

Recommendation 1.6:

No recreational facilities should be constructed in crucial bighorn summer habitat.

Support Needs:
Recreation.

Rationale:

Human activity associated with camping and picnicking sites and major interpretive sites can lead to harassment of bighorn sheep and displacement of sheep away from forage, water, and cover. Such harassment and displacement, especially in crucial summer habitat, can stress bighorn and cause a loss of habitat.

Multiple Use Analysis

This recommendation conflicts with recreational developments in the Spring Mountains (Recreation 5.1), Virgin Mountains (Recreation 1.3), and Red Rock Canyon (Recreation 1.6). It complements HMP development in those areas (Wildlife 2.6) and ACEC proposals (Wildlife 1.37). The conflict can be serious, but resolving it at this stage with a blanket ban on all facility construction in the habitat could unnecessarily deny some important recreational developments. Activity plans are better suited to identify and solve specific resource conflicts.

Multiple Use Recommendation:
Drop the recommendation.

Reason:
This question ought to be resolved at the activity plan level through the development of relevant HMPs and RAMPs.

Decision:
Accept the MFP II recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wildlife
Overlay Reference	Step 1 Step 3

Recommendation 1.7:

Prohibit competitive ORV use within a .5 miles of any springs, seeps, water troughs, guzzlers, or other water sources within quail and chukar crucial areas. Limit competitive ORV use to existing roads, trails, and washes, within the area from .5 miles to 1.5 miles from water sources in bird crucial areas. Limit noncompetitive ORV use (including seismic) to existing roads, trails, and washes within a .5 miles of water sources.

Support Needs:

Recreation and Minerals programs.

Rationale:

The area within 1.5 miles of water sources is considered crucial for quail and chukar particularly during summer. Distribution of these birds will correspond to the availability and location of waters. Other wildlife species, (rabbits, doves, small mammals, and nongame birds) are dependent on these waters and surrounding habitat also. The noise, soil disturbance, and vegetation (food and water) removal associated with ORV use detrimentally impacts these birds and other animals. Public demand for hunting these birds exceeds supply. In 1979, some 5,184 Clark County residents spent 25,520 days hunting quail in Clark County. An additional 1,689 Clark County residents spent 7,419 days hunting quail in other counties.

See Recreation 6.4 for multiple use analysis and recommendation.

Step 1	Step 3

Recommendation 1.8:

Prohibit competitive ORV use within 1.5 miles of yearlong water in mule deer habitat from May 1 to September 30. Limit competitive and noncompetitive (including seismic) ORV use to existing roads, trails, and washes throughout mule deer habitat.

Support Needs:

Recreation and Minerals programs.

Rationale:

Distribution of mule deer in Clark County is extremely limited because of lack of suitable habitat throughout most of the area. Most of the habitat involved is presently managed to prevent or limit competitive ORV use; this should be continued. Deer are limited to area 1.5 miles around water in the summer, in the desert this is the critical time of the year for deer. Deer are dependent on the vegetation (forage and cover) provided by this 1.5-mile area around water. Competitive ORV use in these areas destroys the vegetation.

See Recreation 6.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
FOR THE LANDS OF THE BUREAU

Introduction
The purpose of this report is to provide a management framework for the lands of the Bureau of Land Management in the State of California. The report is organized into four main sections: a description of the lands, a description of the resources, a description of the threats, and a description of the management actions. The first section describes the lands of the Bureau in California, which are located in the western part of the state. The second section describes the resources of the lands, which include wildlife, fish, and plants. The third section describes the threats to the resources, which include habitat loss, overhunting, and overgrazing. The fourth section describes the management actions that are being taken to protect the resources, which include habitat restoration, hunting regulations, and grazing management.

Land Use
The lands of the Bureau are used for a variety of purposes, including agriculture, grazing, and recreation. The most common use is agriculture, which is used for growing crops and raising livestock. Grazing is also a common use, and recreation is becoming increasingly important. The Bureau is responsible for managing the lands to ensure that they are used in a sustainable way that protects the resources for future generations.

Resource Values
The lands of the Bureau contain a variety of resources that have value to society. These resources include wildlife, fish, and plants. Wildlife is important for many reasons, including for its own sake, for the food it provides, and for the recreation it provides. Fish are important for food and recreation. Plants are important for many reasons, including for their own sake, for the food they provide, and for the recreation they provide.

The Bureau is committed to managing the lands in a way that protects the resources for future generations. This report provides a framework for the management of the lands, and it is hoped that it will be useful to the Bureau and to the public.

Step 1

Step 3

Recommendation 1.9:

Continue to prohibit competitive ORV use in the Spring Mountains. Limit noncompetitive use to existing roads and trails.

Support Needs:

Recreation program.

Rationale:

The Spring Mountains provide important habitat for many wildlife species. One of only two populations of elk in the State of Nevada, one of two populations of wild turkey in the State of Nevada, and a significant portion of the mule deer and mountain lion population in Clark County is located in the Spring Mountains. Bighorn sheep also inhabit part of the Spring Mountains. Increasing human use in the Spring Mountains is adversely affecting the wildlife populations. Allowing competitive ORV use in this area would further compound the conflicts.

See Recreation 6.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT OF PUBLIC LANDS
WASHINGTON, D. C. 20250

Project	100-10000
Section	100-10000
Subsection	100-10000
County	100-10000
State	100-10000

Introduction:
The Bureau of Land Management provides information
regarding the many wildlife species
that are found on public lands. It is
the policy of the Bureau to provide
information of wild country in the
State of Nevada, and a significant
portion of the wild deer and mountain
lion populations in this country is
located in the Spring Mountains.
Although there are several parts of the
Spring Mountains National Monument
and in the Spring Mountains area
which are also within the wildlife
population. Although management and
use in this area would be better
understand the conditions.

Section 1.01
General or specific descriptive text
as in the General Introduction. This
section is used to identify the
wild country.

Section 1.02
General or specific descriptive text
as in the General Introduction.

The following is a list of the wildlife and management.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MEP)	
Clark County	
Activity	
Wildlife	
Overlay Reference	
Step 1	Step 3

Recommendation 1.10:

Seismic exploration and competitive ORV activity should be prohibited in the washes identified on the Nongame Bird URA III Overlay. ORV activity should be prohibited in a quarter-mile wide buffer along both sides of the washes also.

Support Needs:

Recreation and Minerals program.

Rationale:

The identified washes support many more birds and other wildlife species than the surrounding open desert. Most of the washes are also important Gila monster (State-listed "rare") habitat. Studies in the Mojave and Colorado deserts in California found breeding bird densities six times higher with 15 to 45 times the total number of individuals in washes as on the open desert. Winter bird populations were 8 to 60 times higher. The particular washes identified are significant because riparian plants like desert willow, mesquite, catclaw acacia, and tamarisk are dominant vegetation that provide additional food, cover, and nesting habitat. Wildlife inhabit the edges of different habitats, the quarter-mile buffer will insure the edge created between wash habitat and open desert habitat is not subjected to the impacts of competitive ORV use.

Executive Order 11988 (Floodplain Management) of May 24, 1977, mandates BLM to identify and protect wildlife habitat and other vital ecologically sensitive areas from disruption and to minimize vegetation removal. The Sikes Act, 1974, Section 202(C)(3)(D) provides protection for State-listed threatened or endangered species. BLM Manual 6740 recommends buffer zones along riparian zones.

See Minerals 1.1 for multiple use analysis and recommendation.

Step 1	Step 3

Recommendation 1.11:

Starting with current populations in 1983, provide, by 1990, a minimum of 1,918 elk AUMs of perennial forage in the allotments shown below so as to achieve reasonable numbers of elk. Monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to attain the allocation required to support elk reasonable numbers.

TABLE WL-1.11

Big Game Area	Allotment*	Reasonable # AUM Demand
E-1	"8888"	230
	Kyle Canyon	115
	"3333"	115
	Lucky Strike	403
	Spring Mountain	153
	Wheeler Wash	902
TOTAL		1,918

*All allotments are currently ephemeral.

Support Needs:
Range.

Rationale:

Clark County has one of only two populations of elk in Nevada. Section 102 of FLEMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals.

BLM Manual section 4111.31A requires consideration of wildlife before determining the amount of forage available to livestock. BLM Manual section 4730.3 authorizes reducing livestock allocations, but not wildlife allocations, to meet horse and burro needs. BLM Manual sections 4111.31D and 4111.32D5c state that allocations will be made to accommodate the needs of a reasonable number of wildlife animals.

Recommendation changed to Range Management 1.6.

Step 1

Step 3

Recommendation 1.12:

Starting with current populations in 1983, provide, by 1990, a minimum of 9,400 bighorn sheep AUMs of perennial forage in current habitat (as shown in Table WL-1.12) so as to achieve reasonable numbers. Monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to attain the allocation required to support bighorn sheep reasonable numbers.

Support Needs:

Range.

Rationale:

Section 102 of FLEMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals. BLM Manual section 4111.31A requires consideration of wildlife demands before determining the amount of forage available to livestock. BLM Manual 4730.3 authorizes reducing livestock allocations, but not wildlife allocations, to meet horse/burro needs. BLM Manual sections 4111.31D and 4111.32D5c state that allocations will be made to accommodate the needs of a reasonable number of wildlife animals.

In addition, the desert bighorn has been designated by BLM as a sensitive species requiring special management consideration, and public interest in this animal has resulted in the formation of the Desert Bighorn Council and the Nevada Fraternity of Desert Bighorn. This management emphasis and public interest further justifies allocating forage to this historic, big game species.

Step 3

Recommendation 1.13:

Starting with current populations in 1983, provide, by 1990, a minimum of 5,850 mule deer AUMs of perennial forage in current habitat (as shown in Table WL-1.13) so as to achieve reasonable numbers. Monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to attain the allocation required to support mule deer reasonable numbers.

Support Needs:
Range.

Rationale:

Mule deer distribution is severely restricted in Clark County. Hunter demand far exceeds allowable harvest of present populations in Clark County. Section 102 of FLPMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals. BLM Manual section 4111.31A requires consideration of wildlife demands before determining the amount of forage available to livestock. BLM Manual section 4730.3 authorizes reducing livestock allocations, but not wildlife allocations, to meet horse/burro needs.

Recommendation changed to Range Management 1.8.

Step 3

Recommendation 1.14:

Reserve 200 lbs/acre ephemeral forage for wildlife forage and vegetation needs before licensing any to livestock.

Support Needs:

Range.

Rationale:

The importance of annuals in the diets of bighorn and tortoises has been documented as well as the competitive diet overlap between these species and livestock. Annuals are extremely important to quail, too (milkvetch, filaree). Rodents and non-game species use annuals as food sources, cover, and nesting materials. These species, in turn, are prey bases for raptors and coyotes. To maintain the habitat and provide the needs of many wildlife species, annuals should be reserved. Reservation of 200 lbs/acre was accepted in the California Desert Plan based on the professional judgement of range conservationists. BLM Manual 4111.32D5c states it is imperative that forage be reserved for wildlife for specific areas for applicable seasons of use, and not merely assigned unit-wide.

BLM Manual 4121.31A.4 states short-term leases can be issued on ephemeral range for these areas where no conflicts exist. BLM Manual 4112.11A.4a states that care must be taken that habitat requirements are met where grazing livestock use the same areas.

*No such thing
can not be done in
Clark County - only can
issue a permit. 100*

Recommendation changed to Range Management 1.9.

Step 3

Recommendation 1.15:

No annual vegetation should be
licensed to livestock in crucial
bighorn summer.habitat.

Support Needs:

Range.

Rationale:

Available data indicates dietary
overlap between bighorn and livestock.
Annuals are used by both species.
Since bighorn populations are limited
by the available forage in crucial
summer habitat, conflicts for annuals
in these areas have the most severe
impacts on bighorn. BLM Manual
4111.32D.5c states that it is
imperative forage be reserved for
wildlife for specific areas for
applicable seasons of use and not
merely assigned unit-wide. BLM
Manual 4121.31A.4 states short-term
leases can be issued on ephemeral
range for those areas where no
conflicts exist.

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity:
Wildlife

Overview: Reference

Step 1

Step 3

Recommendation 1.16:

Field examinations, including clipping and weighing, should be conducted by BLM personnel prior to ephemeral use licensing of livestock to ensure proper management and utilization of the range resource and to avoid conflicts between livestock and wildlife.

Support Needs:

Range.

Rationale:

Wildlife needs for ephemeral vegetation have been identified. Big game AUM shortages, livestock concentration areas in crucial bighorn summer habitat, desert tortoise forage and cover demands, and other small wildlife forage and cover demands have been discussed. Reserving 200 pounds of annual vegetation per acre has been recommended. To meet these demands, determine total available vegetation, and ensure proper resource management and continued existence of an annual seed source, range examinations involving the clipping and weighing method should be required in every allotment prior to ephemeral licensing.

See Range Management 1.9 for multiple use analysis and recommendation.

Overlay Reference	
Step 1	Step 3

Recommendation 1.17:

Do not permit livestock grazing on the following allotments where grazing is not now allowed or has not occurred in several years:

Wheeler Slope Unallotted Area --8888
Spring Mountain Unallotted Area--4444
Rose Spring Unallotted Area --3333
Kyle Canyon --5422

Support Needs:
Range Program.

Rationale:

The listed allotments are all within the elk distribution area of the Spring Mountains. Currently, four significant grazers -- wild horses/burros, mule deer, bighorn sheep, and elk -- are utilizing the range in all or portions of the elk habitat. Livestock and elk both have preferences for grasses, particularly in the summer season. The lack of grass or meadow areas is felt to limit the elk population (75 animals) in the Spring Mountains. Livestock grazing in those unallotted areas would further decrease the amount of grasses available to elk and may result in population declines. BLM Range Manual 4112.11A4e states domestic livestock may be excluded from range used by wildlife when justified by local conditions.

See Range Management 1.2 for multiple use analysis and recommendation.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT PLAN

1. Purpose and Objectives

The purpose of this management plan is to provide a framework for the management of the land resources of the [Area Name] in a manner that is consistent with the National Forest Management Act (NFMA) and the National Forest Management Plan (NFMP). The plan is based on the following principles:

- 1. The land resources of the [Area Name] are a national treasure and should be managed for the benefit of present and future generations.
- 2. The land resources of the [Area Name] should be managed in a manner that is consistent with the NFMA and the NFMP.
- 3. The land resources of the [Area Name] should be managed in a manner that is consistent with the National Forest Management Act (NFMA) and the National Forest Management Plan (NFMP).

The plan is based on the following principles:

- 1. The land resources of the [Area Name] are a national treasure and should be managed for the benefit of present and future generations.
- 2. The land resources of the [Area Name] should be managed in a manner that is consistent with the NFMA and the NFMP.
- 3. The land resources of the [Area Name] should be managed in a manner that is consistent with the National Forest Management Act (NFMA) and the National Forest Management Plan (NFMP).

2. Land Use Designation

The land use designation is based on the following principles:

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (XFP)
Clark County

Activity
Wildlife

Overlay Reference

Step 1

Step 3

Recommendation 1.18:

Do not license livestock in the following unallotted and recently unlicensed allotments.

Newberry -- 5415
Unallotted Area -- 2222
Spring Mountain -- 4444
Unallotted Area -- 7777
Unallotted Area -- 3333
Unallotted Area -- 8888
Kyle Canyon -- 5422
Unallotted Area -- 6666
Glendale -- 2009
Muddy River -- 2017
Pittman Well -- 2019
Rox -- 2021
Sunrise Mountain -- 2022

Support Needs:

Congressional review, Range.

Rationale:

Issuing grazing licenses in these areas will create new conflicts for forage, water, and space between livestock and wildlife. All of these allotments overlap with current distributions of bighorn, elk, deer, and/or desert tortoise (in crucial tortoise habitats). Bighorn, elk, and tortoises all compete with livestock for grasses. Subsequent water developments would create accentuated, localized, severe conflicts. 43 CFR 4120.2-1(c) allows cancellation of leases to meet land use plan needs.

Section 202(e)(2) of FLMA requires Congressional review of any management decision excluding a principal use from a tract of land 100,000 acres or larger for two or more years.

See Range Management 1.2 for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 1.19:

Discontinue licensing of domestic sheep in the McCullough Mountain allotment.

Support Needs:

Range.

Rationale:

Domestic sheep were licensed in the McCullough Mountain allotment for the first time in 1980. Excellent, occupied bighorn habitat is located in the McCullough and Highland Ranges within the McCullough allotment. Bob McQuivey, NDOW wildlife biologist, noted the introduction of domestic sheep into the Virgin Mountains in the early part of this century may have played a major role in the demise of that range's bighorn population. Because of the conflict for forage, water, and space, and the susceptibility of bighorn to diseases of domestic sheep, domestics should not be licensed in the vicinity of occupied bighorn sheep habitat.

Multiple Use Analysis

Livestock grazing in the McCullough Mountain allotment has traditionally been by cattle. Sheep were licensed for the first time in 1980. If the domestic sheep had been diseased and contact was made, severe population declines to existing bighorn herds in the McCullough and Highland ranges may have resulted.

Multiple Use Recommendation:

Do not license grazing by domestic sheep in the McCullough Allotment. Allow cattle grazing.

Reason:

Cattle do not present the disease problems that may threaten existing bighorn population that domestic sheep do. Cattle has been the traditional livestock class allowed in the allotment.

Support Needs:

As stated in MFP 1.

Alternative Considered:

Continue licensing of domestic sheep.

Decision:

Accept the MFP II recommendation as written.

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wildlife
Overlay Reference	Step 1 Step 3

Recommendation 1.20:

Discontinue trailing and licensing of domestic sheep in Bunkerville and Billy Goat Peak allotments. Do not develop any new dual-use (cattle/domestic sheep) allotments in Clark County that contain current or historic bighorn habitat.

Support Needs:
Range.

Rationale:

While trailing has not occurred for many years, grazing of domestic sheep has been allowed for the last two years in Bunkerville allotment following five years of non-use. Bighorn sheep were reintroduced into their historic habitat in the Virgin Mountains in 1979 and 1980. Bob McQuivey, NDOW wildlife biologist, noted the introduction of domestic sheep into the Virgin Mountains may have played a major role in the demise of that range's bighorn population. Because of the conflict for forage, water, and space, and the susceptibility of bighorn to diseases of domestic sheep, domestics should not be licensed in the vicinity of the Virgin Mountains or in any other allotments in current or historic bighorn habitat that currently do not allow dual-use.

Multiple Use Analysis

Reintroduction of bighorn sheep into the Virgin Mountains was initiated in 1979, establishing a conflict with livestock grazing in that area.

The Bunkerville allotment covers part of the Virgin Mountains and all of Black Ridge. Domestic sheep have been grazed in the Bunkerville allotment for more than 50 years. The sheep operator has found it uneconomical to graze sheep there for the past five years. However, since the use is historical, it may be requested again in the future when the economics of sheep grazing are improved. This would engender a direct competition for forage, water, and space. An immediate concern is the susceptibility of bighorn to diseases of domestic sheep.

The trailing operation involves travel from the Arizona Strip District through the Billy Goat Peak and Bunkerville allotments to the Toquop Sheep allotment. The key area of conflict is at Government Springs in the Bunkerville allotment. The trailing route -- Gold Butte Road -- has been used since approximately 1930 and is established by agreement among the different range users.

Introductions of either bighorn sheep or domestic sheep into allotments where the other is present would immediately generate a similar conflict.

(Wildlife 1.20 continued)

Multiple Use Recommendation:

Modify the recommendation as follows:
Resolve the domestic - bighorn sheep conflicts in the Bunkerville and Billy Goat Peak allotments through a consultation and coordination (C&C) process before the end of FY83. Do not license domestic sheep grazing until the resolution is accomplished. Continue the current trailing operation during the (C&C) process. Do not develop new dual-use allotments in current or historic bighorn sheep habitat (or introduce bighorn sheep into current or historic domestic sheep allotments) until potential conflicts are identified and resolved through an HMP or AMP, or in a release site description.

Support Needs:

Range and Wildlife.

Reason:

Both the operators and the Department of Wildlife will most likely assert historic privileges in the Virgin Mountain area. A BLM denial of one or the other uses at this time would probably not finally resolve the issue. A CRMP effort, targeted for completion during FY83, would provide a timely response to the issue.

In general, conflicts such as this would not occur if no introduction of either bighorn or domestic sheep were made without the benefit of activity planning and the environmental analysis processes.

Alternatives Considered:

1. Requiring NDOW to keep bighorn sheep from Government Springs during trailing operations.
2. Deny bighorn sheep use west of Government Springs into the Black Ridge area.
3. Do not license domestic sheep use in Bunkerville allotment.

Decision:

Accept the MFP II recommendation as written, but delete the reference to accomplishment in FY83.

Reason:

Funding constraints and management prioritization of allotments may push accomplishment of this task further into the future.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Wildlife

Overlay Reference

Step 1

Step 3

Recommendation 1.21:

Eliminate domestic sheep use in the Christmas Tree Pass Allotment that overlaps with historic bighorn habitat. This area includes T.30S., R.65E., Sec. 1, 2, 11, and a portion of 12; T.30S., R.66E., Sec. 5, 6, and portions of 4, 7, and 8.

Support Needs:

Range.

Rationale:

The current boundary for domestic sheep grazing overlaps with historic bighorn habitat. Studies indicate domestic and bighorn sheep have similar food habits and domestics harbor diseases detrimental to bighorn, citing examples of bighorn declines following influx of diseased domestics. Bob McQuivey, NDOW wildlife biologist, noted no established populations exist in areas presently grazed by domestics in Nevada. While no bighorn are known to use the historic habitat in the domestic sheep use area, bighorn have been seen a few miles to the east. An HMP and possible reintroduction is proposed to expand bighorn into this historic habitat.

See Range Management 1.2 for multiple use analysis and recommendation.

Overlay Reference

Step 1

Step 3

Recommendation 1.22:

Resolve potential conflicts between livestock and bighorn in historical habitat in the Newberry Mountains allotment by eliminating livestock grazing in the allotment.

Support Needs:

Range.

Rationale:

The Newberry Mountains allotment contains some excellent bighorn habitat. Due to spatial conflicts between livestock and bighorn, future bighorn populations could be displaced by livestock. Since no livestock have been licensed in this allotment for many years, terminating livestock use could benefit bighorn with no impact on livestock operators. Under 43 CFR 4120.2-1(c), livestock grazing leases can be cancelled to reach management objectives.

See Range Management 1.2 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Step 1

Step 3

Recommendation 1.23:

Prohibit livestock, wild horses, and burros access to water sources in bighorn crucial summer habitat to protect the forage for bighorn and guarantee access to water by bighorn in crucial habitat. Pipe water away from these sources presently used by livestock, horses, or burros, to points beyond bighorn habitat for livestock, horse, and burro use, only if such action does not perpetuate the conflict.

Support Needs:

Range, Wild Horse and Burro.

Rationale:

Available perennial AUMs within current crucial summer habitat do not meet reasonable number summer AUM demand. The limited AUMs allocated to bighorn should be protected. Special attention should be given to protecting forage for bighorn in these crucial summer habitats since available forage in this season is a primary limiting factor. It should be remembered that bighorn and other grazers need not be in the same area in the same season to compete. Unfortunately, sheep may be reluctant to approach water sources when cattle are nearby. As a result, livestock concentrations near water may reduce bighorn use of the water. This complements the conflict for forage due to local, intensified livestock, wild horse, and burro grazing around water sources. Overgrazing by these species can remove forage allocated to bighorn and upon which they are dependent. This recommendation will help protect and maintain crucial summer habitat and forage for bighorn.

BLM Manual 4111.32D.5c states it is imperative that forage be reserved for wildlife for specific areas for applicable seasons of use, not merely assigned unit-wide. Relocating water for horses, burros, and livestock will help protect bighorn forage.

Step 1

Step 3

Recommendation 1.25:

Establish and enforce seasons-of-use for livestock on ephemeral-perennial allotments to ensure continuance of seed sources and the vegetation resource based on physiological and ecological factors.

Support Needs:

Range.

Rationale:

To ensure plant species and subsequent animal species diversity, the vegetation resource must be protected. Without proper rest from grazing, annuals cannot develop and drop seed and perennials cannot maintain vigor or survive. Overuse due to a lack of seasons-of-use restrictions can eliminate food sources, cover, and nesting material for small wildlife forms. BLM Manual section 4111.32C states proper seasons-of-use should be based on physiological and ecological factors as affected by local grazing practices.

See Range Management 1.2 for multiple use analysis and recommendation.

State	Illinois
County	Madison

Step 1

Step 3

Recommendation 1.26:

Revise the Crescent Peak Allotment Management Plan (AMP) to ensure no conflicts occur with wildlife at water sources due to livestock concentrations, and to adjust the base herd in Nevada to a level equivalent to range capacity.

Support Needs:

Range.

Rationale:

Crescent Peak allotment is licensed for 530 cattle yearlong. Livestock concentrations around waters important to wildlife, including bighorn, are detrimental to the forage resource and hamper use by other animals. Revision of the AMP could adjust the licensing and base herd level to protect the resource based on physiological and ecological factors and could resolve conflicts with wildlife for water. BLM Manual section 4111.31H states grazing privileges cannot exceed estimated potential grazing capacity and active grazing shall not exceed current grazing capacity.

See Livestock Grazing 1.5 for multiple use analysis and recommendation.

Project Number	10000000000000000000
Project Name	10000000000000000000
Project Location	10000000000000000000
Project Status	10000000000000000000
Project Date	10000000000000000000

Introduction
The purpose of this document is to provide a framework for the management of the land resources of the project area. The document is organized into four main sections: **1. Purpose and Scope**, **2. Management Framework**, **3. Implementation**, and **4. Conclusion**. The purpose of this document is to provide a framework for the management of the land resources of the project area. The document is organized into four main sections: **1. Purpose and Scope**, **2. Management Framework**, **3. Implementation**, and **4. Conclusion**. The purpose of this document is to provide a framework for the management of the land resources of the project area. The document is organized into four main sections: **1. Purpose and Scope**, **2. Management Framework**, **3. Implementation**, and **4. Conclusion**.

Management Framework
The management framework is the central element of the management plan. It provides a clear and concise statement of the purpose and scope of the project, and it outlines the management objectives and the management actions that will be taken to achieve those objectives. The management framework is the central element of the management plan. It provides a clear and concise statement of the purpose and scope of the project, and it outlines the management objectives and the management actions that will be taken to achieve those objectives.

Implementation
The implementation section of the management plan describes the specific actions that will be taken to achieve the management objectives. It includes a detailed description of the management actions, the resources that will be required to implement those actions, and the timeline for the implementation of the management actions.

The purpose of this document is to provide a framework for the management of the land resources of the project area. The document is organized into four main sections: **1. Purpose and Scope**, **2. Management Framework**, **3. Implementation**, and **4. Conclusion**.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Wildlife

Overlay Reference
Step 1 Step 3

Recommendation 1.27:

Remove wild/abandoned livestock from public land.

Support Needs:

Range.

Rationale:

Due to unintentional losses and/or poor herd management, stray livestock are roaming public lands. This is a problem especially around the yearlong waters along Bunkerville Ridge. These stray animals are competing for forage, water, and space with bighorn, mule deer, small wildlife, and licensed livestock.

Multiple Use Analysis

Wild/abandoned livestock are a constant and destructive problem on public lands. Uncontrolled, these animals compete for forage, trample and foul water sources, and damage range and wildlife projects. These animals will hamper any efforts to achieve management on the public land, and money spent to accomplish on-the-ground management could be wasted. 43 CFR 4150.2(b) says "When neither the owner of the unauthorized livestock nor his agent is known the authorized officer may proceed to impound the livestock under 4150.5." Removal of these livestock does not conflict with any other recommendation.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

The Bureau is authorized to remove any unauthorized livestock from public land according to 43 CFR 4150.2(b). Removing these animals would eliminate conflicts with wildlife, wild horses and burros, and licensed livestock, and help accomplish on-the-ground management.

Support Needs:

As stated in MFP I.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

Overlay Reference

Step 1

Step 3

Recommendation 1.28:

No new water facilities, or extension or maintenance of existing facilities, should be constructed for livestock, wild horses, or burros without development and appropriate review of an environmental assessment record (EAR) to ensure no new conflicts with bighorn for forage will be created.

Support Needs:

Range, Wild Horses & Burros, Division of Operations.

Rationale:

Present available perennial AUMs do not meet reasonable number yearlong AUM demand for bighorn except in the McCullough and Eldorado Ranges. Available perennial AUMs do not meet reasonable number summer AUM demand within current crucial summer habitat. The limited AUMs allocated to bighorn should be protected. Special attention should be given to protecting forage for bighorn in crucial summer habitat since available forage in this season is a primary limiting factor. Development of livestock waters in bighorn habitat, or within travelling distance of bighorn habitat, and the resultant intensified grazing by livestock, wild horses, and/or burros, may create new localized conflicts for existing forage that should be reserved for bighorn. This recommendation will help ensure that food resources will be maintained for bighorn as required by Section 102 of FLPMA and BLM Manual sections 4111.31A, 4111.42B3, 4112.11, and 4112.11A4c.

Multiple Use Analysis

No conflicts with this recommendation were noted except maintenance of existing projects. An environmental assessment is not required under BLM guidelines for maintenance of existing facilities. Completion of new projects, or extensions of existing ones, are required to have environmental assessments under present BLM guidelines.

Multiple Use Recommendation:

No new water facilities or extensions of existing facilities should be constructed for livestock, wild horses, or burros without development and appropriate review of an environmental assessment to assure no new conflicts are created between livestock and bighorn sheep.

Reason:

As stated in the Multiple Use Analysis above.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

None

Note: Attach additional sheets, if needed
instructions on reverse)

(Wildlife 1.28 continued)

Decision:

Modify the MFP II recommendaiton to read:

All new water facilities, or extension of existing facilities, constructed to benefit livestock, wildlife, or wild horses and burros, will subjected to an appropriate level of environmental review to assure new, unresolved, conflicts are not created.

Reason:

All water developments, regardless of the benefiting use. Can create resource conflicts.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Wildlife

Overlay Reference

Step 1

Step 3

Recommendation 1.29

Remove all horses and burros from selected current and historic bighorn habitat. These selected areas should be managed as horse and/or burro-free areas. Burros in the Gold Butte area could jeopardize reintroduction efforts as cooperatively approved by BLM and NDOW. Selected areas are listed below:

Current habitat

Bird Spring - horses
Red Rock/LaMadre - horses
Muddy - burros
Eldorado - burros
N. McCullough - burros

Historic habitat

Gold Butte - burros

Support Needs:

Wild Horse and Burro Program, NSO
Horse Capture Crews.

Rationale:

The adaptable and durable horses and burros are serious competitors for food and water. Since horses and burros are not ruminants, their digestive systems are less efficient, and they must consume more forage than ruminants (i.e., bighorn) to meet nutrition and energy demands.

Overgrazing has less impact on horses than bighorn due to their ability to move long distances from water. In addition to competing for grasses, horses require 10 to 12 gallons of water per horse per day. This can be a serious limiting factor for bighorn in areas with limited water supplies (Challis Wild Horse Management Plan, BLM).

Grasses decrease and shrubs increase due to overgrazing by burros. This can create serious forage problems for bighorn. Trampling, wallowing, dusting, and rubbing activities in and around spring sources can degrade riparian zones and water quality.

Summer concentrations near water can lead to a decrease in rodent populations, overuse of vegetation, loss of quail habitat, decline in the raptor prey base, and decrease in bighorn use. Excessive burro numbers may stress lambs since both show a seasonal preference for forbs.

The adaptability of horses and burros should be considered in bighorn management. While bighorn are restricted to mountainous terrain, wild horses and burros can survive on valley floors. So, to resolve conflicts, horses and burros should be managed away from current and historic bighorn habitat.

The adaptability of horses and burros should be considered in the management of the Wild Horse and Burro Program.

(Wildlife 1.29 continued)

The NDOW requests that the Gold Butte area be designated a burro-free area to enhance successful reintroduction of bighorn. This recommendation deserves serious consideration since existing laws and a memorandum of understanding requires coordination of our horse and burro management with NDOW. Overgrazing of the vegetation in burro concentration areas is recognized in the Gold Butte area.

In addition, reserving forage for bighorn in Gold Butte requires management of burros in this area.

See Wild Horses and Burros 1.1 for multiple use analysis and recommendation.

The first step in the development of a water supply system is the determination of the water requirements of the community. This is done by estimating the population of the community and the amount of water required per person. The next step is to determine the available water resources in the area. This is done by studying the hydrology of the area and the amount of water that can be stored in the area. The third step is to determine the most economical way to develop the water resources. This is done by comparing the costs of different water supply systems and selecting the one that is most economical.

In the development of a water supply system, it is important to consider the needs of the community and the available water resources. The most economical way to develop the water resources is the one that meets the needs of the community and is the most cost-effective.

Step 1	Step 3

Recommendation 1.30:

Develop a Fire Management Plan which considers wildlife habitat needs for all ranges with bighorn sheep, mule deer, or elk populations. Efforts should be directed toward the pinyon-juniper and blackbrush vegetation types. Such a program would be particularly beneficial in the Spring Mountains (Bird Spring Range included), South McCulloughs, Virgin Mountains, and Newberry Range. The programs for these ranges should be completed by end of fiscal year 1985.

Support Needs:

Division of Operations, Fire Management.

Rationale:

Complete protection of these areas has resulted in large stands of climax plant communities that have reduced the capacity to support these big game species. Fire can be used as an effective tool to reverse this trend. Burns have been noted as preferred use areas by bighorn sheep, elk, and deer in this District. In addition, fire can be used to create interspersed habitat types, with more edge, which support higher diversities and numbers of wildlife species.

See Fire 2.1 for multiple use analysis and recommendation.

Step 1 Step 3

Recommendation 1.31:

Develop a green firewood cutting program for the Spring, McCullough, and Virgin Mountains to improve habitat for Rocky Mountain elk, mule deer, bighorn sheep, and other wildlife species. Roads may be necessary to complete this recommendation. After cutting is completed, roads should be closed to prevent undue harassment of wildlife.

Support Needs:

Forestry program.

Rationale:

These ranges, particularly the Spring Mountain Range, have been protected from wildfire for a considerable number of years. As a result, much of the habitat is returning to climax vegetation communities. Climax communities in much of these ranges consist largely of monotypic stands of pinyon-juniper woodlands, with little or no understory vegetation. This lack of vegetation diversity limits wildlife species diversity. Initiation of a green firewood cutting program can help reverse the trend towards climax, and provide openings that create more varied habitats to support more species and numbers of wildlife.

See Forestry 1.1 for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 1.32:

Maintain water at all spring sources. Future water projects should not be developed in such a manner that associated riparian zones are lost. Maintenance may include fencing to exclude livestock and wild horses/burros from riparian zones. (See Table WL-1.33 for prioritized lists.)

Support Needs:

Division of Operations, Range, Wild Horse and Burro.

Rationale:

More than two dozen spring sources in Clark County are presently being trampled and fouled from excessive livestock or wild horse/burro use. In several instances, existing livestock water developments have eliminated water and associated riparian zones which are important wildlife habitats (see Clark County Wildlife Habitat Inventory, 1979, or Tables .46-13 and .46-14 in URA III). This is inconsistent with policy in BLM Manual 1603.12D1, D3(a), and D4(c). It is BLM policy to maintain water available at the source.

See Wildlife 1.35 for multiple use analysis and recommendation.

UNITED STATES
 DEPARTMENT OF THE INTERIOR
 BUREAU OF LAND MANAGEMENT
 LAND ACQUISITION AND MANAGEMENT PLAN
 NATIONAL SYSTEM-ANALYSIS-SECTION

This plan is a general statement of the land acquisition and management policy of the Bureau of Land Management, Department of the Interior, for the purpose of providing a basis for the development of specific land acquisition and management plans for the various lands owned or controlled by the Bureau. The plan is based on the following principles:

1. The acquisition of land should be based on the public interest and the need for the land for the purposes of the Bureau.
2. The acquisition of land should be based on the availability of funds and the ability of the Bureau to manage the land.
3. The acquisition of land should be based on the need for the land for the purposes of the Bureau.
4. The acquisition of land should be based on the need for the land for the purposes of the Bureau.

The plan is based on the following principles:

1. The acquisition of land should be based on the public interest and the need for the land for the purposes of the Bureau.
2. The acquisition of land should be based on the availability of funds and the ability of the Bureau to manage the land.
3. The acquisition of land should be based on the need for the land for the purposes of the Bureau.
4. The acquisition of land should be based on the need for the land for the purposes of the Bureau.

Step 1

Step 3

Recommendation 1.33:

All new or existing livestock water troughs or tanks should have escape devices for birds and small animals. Escape devices should be constructed according to guidelines in BLM Technical Note 305, September 1977. All necessary escape devices should be in place on existing troughs or tanks by the end of fiscal year 1985. Future livestock waters should be designed to include escape devices and other facilities (drinkers) which will be constructed concurrently with the water development.

Support Needs:

Division of Operations.

Rationale:

Approximately 70 existing troughs in Clark County (35 in each planning unit) do not have escape devices (see Clark County Wildlife Habitat Inventory 1979 or Wildlife Water Inventory Summary Table .46-13 and .46-14 URA III Clark County).

Escape devices can serve multiple functions: they allow access to water that is out of reach to small wildlife species; they prevent drowning of small wildlife species in steep-sided troughs; and they can be constructed to protect float valves that regulate water levels in troughs.

See Livestock Grazing 2.1 for multiple use analysis and recommendation.

Step 1	Step 3

Recommendation 1.34:

Construct wildlife drinkers where needed. Wildlife drinkers should be provided along any present or future livestock water pipelines or developments.

Support Needs:

Division of Operations, Range Management Program.

Rationale:

Water is the primary limiting factor for wildlife in Clark County. At least 20 (13 in Stateline and 7 in Virgin Valley PU) drinkers alone are needed to allow access by large mammals to existing waters that are surrounded by corrals. Some wildlife species, particularly big game like bighorn sheep and deer, are intimidated by corrals and will not drink at waters surrounded by them. Oftentimes the location of livestock watering facilities is not in adequate cover for many wildlife species. Using a small portion of the water supplied by livestock water developments, wildlife drinkers can be placed in more suitable cover or terrain that will promote maximum utilization by wildlife. Because of these factors, where feasible, separate watering opportunities for wildlife should be provided in association with other water developments.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Wildlife

Overlay Reference
Step 1 Step 3

Recommendation 1.35:

Develop wildlife waters where deemed feasible. See Clark County Wildlife Habitat Inventory for possible locations.

Support Needs:

Division of Operations, NDOW.

Rationale:

Water is the primary limiting factor for wildlife in Clark County. Approximately 48 and 10 ephemeral waters in the Stateline and Virgin Valley Planning Units respectively, were identified in the Clark County Wildlife Habitat Inventory as having potential to be developed as yearlong waters. Ephemeral waters usually dry up when water is needed by wildlife the most. Insuring yearlong water can increase wildlife populations and diversity. The potential to expand use by big game in all ranges is possible with development of more yearlong waters.

Multiple Use Analysis

(Includes Livestock Grazing 2.2, Wild Horses and Burros 1.4 and 2.4, Watershed 3.1, and Wildlife 1.23, 1.32, and 1.34)

In the desert environment water is the key limiting factor for achieving proper management of resources. By developing and protecting water sources, yearlong water can be made available for wildlife and livestock. Providing water when it is needed most can increase wildlife populations, improve livestock distribution, reduce conflicts between livestock and wildlife, and improve the range resource.

Water sources are being contaminated and degraded by trampling and fouling from livestock and wild horses and burros. Fencing water sources and making water available by piping water to troughs (Watershed 3.1) will enable a water source to be used on a yearlong basis for the benefit of multiple use management. The use of pipelines to disperse water will improve livestock distribution, reduce conflicts with wildlife, livestock, wild horses and burros, and make water available to wild horses and burros, and livestock on a more dependable basis (Livestock Grazing 2.2 and Wild Horses and Burros 1.4). With the demand for water in the desert, development of new water sources is very important; however, care must be taken to insure that water sources and riparian zones are protected, new conflicts for forage and habitats are not created, and water is made available for multiple uses (Wildlife 1.34 and 1.32, and Livestock Grazing 2.2).

(Wildlife 1.35 continued)

Some water sources are used by livestock, wildlife, and wild horses and burros in areas where forage competition exists (Wildlife 1.23). Continued use of the waters by all animals would continue the present competition.

Many water sources, both natural and man-made, serve wild horse and burro areas. This creates forage competition, which the vegetation resource may or may not be able to sustain. While livestock are removable from ranges, particularly ephemeral ranges, horses and burros are year-round grazers. New waters, available to horses and burros outside of existing herd areas, could create new or intensify existing competition for forage, with potential detriment to wildlife or the forage resource.

A further consideration with respect to water developments is long-term maintenance. Non-maintenance of projects would ultimately lead to the loss of the waters, the investment, and the benefit provided the resource by the project (Wildlife 1.36).

Multiple Use Recommendation:

Provide water for wildlife, wild horses and burros, and livestock use on public land throughout Clark County. Existing waters should be maintained at the source and actions taken (such as fencing) by 1990 to exclude livestock and wild horses and burros from degrading the source or associated riparian areas (see Tables WL-1.33 and LG-2.2). Where livestock or wild horses and burros now use the waters, use must be provided away from the protected areas. Existing forage use by any animal should not be denied by denying water access until habitat/allotment use levels are determined after coordination and consultation and monitoring. New waters can be developed (by BLM, NDOW, or ranchers), but such developments must not create new competition for forage or habitat among wildlife, livestock, or wild horses and burros. Wildlife drinkers

Reason:

Water, in the desert, is the key limiting factor to all animals. There are existing competitions for water and forage which must be resolved through the monitoring and coordination and consultation processes. BLM can, however, avoid new conflicts by judicious development of waters throughout the county. Many direct water use conflicts between animals and between animals and water values themselves, can be resolved by fencing water sources and riparian areas and providing use to some animals outside the enclosure.

(Wildlife 1.35 continued)

should be routinely provided on all projects, unless new conflicts are created thereby. Do not develop new waters which have the sole purpose of expanding wild horse and burro areas or periods-of-use.

On all new water developments permitted by BLM, and on all waters in which BLM has an interest, wildlife use should be made available to wildlife on a year-round basis.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Denying current water use to some classes of animals.
2. Allowing expansion of wild horse and burro habitat through water developments.
3. Do not protect water sources and riparian areas.

Decision:

Modify the MFP II recommendation to read as follows:

Provide water for wildlife, wild horses and burros, and livestock use on public land throughout Clark County. Existing waters should be maintained at the source and actions taken (such as fencing) exclude livestock and wild horses and burros from degrading the source or associated riparian areas (see Tables WL-1.33 and LG-2.2). Where livestock or wild horses and burros now use the waters, use must be provided away from the protected areas. Existing forage use by any animal should not be denied by denying water access until habitat/allotment use levels are determined after consultation and coordination and monitoring. New waters can be developed (by BLM, NDCW, or ranchers), but such developments must not create new competition for forage or habitat among wildlife, livestock, or wild horses and burros. Wildlife drinkers

Reasons:

Decisions on specific water developments, identified in LG 2.2, cannot be made without a discussion of feasibility, projected funding, and priority ranking.

One comment on Table LG 2.2 (LG 2.2 is referenced to Wildlife 1.35) stated that the proposed projects must be surveyed for archaeological/historical resources (if these areas have not been previously surveyed) and that the surveys and reports must be coordinated with the State. In response, BLM has a Memorandum of Understanding with the Advisory Council on Historic Preservation concerning cultural resources surveys to be conducted prior to range improvement programs and concerning mitigation of significant cultural resources located on such surveys.

Step 1

Step 3

Recommendation 1.36:

Routinely visit and maintain wildlife projects in Clark County.

Support Needs:

Division of Operations.

Rationale:

Wildlife projects such as guzzlers, bird/small mammal ladders, catchments, vegetation manipulations, etc., increase the availability of resources upon which wildlife populations become dependent. To ensure the survival of dependent populations, determine the need for new projects, and protect the initial investment, these projects should be maintained.

See Livestock Grazing 2.1 for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 1.37:

Manage bighorn summer habitat, lambing habitat, and migration routes as Areas of Critical Environmental Concern (ACEC). Top priority should be given to the following ranges in the order listed: Arrow Canyon, McCullough, Highland, Red Rock/LaMadre, Muddy, Bird Spring, Eldorado, Virgin Mountains, and New York/Castle/Piute.

Support Needs:

All activities.

Rationale:

FLPMA authorizes the designation and protection of ACECs through the planning process. ACECs include areas requiring special attention to protect endangered, threatened, or sensitive fish and wildlife species, or habitat components needed to maintain and perpetuate their populations. The MX program, oil and gas exploration and development, and increased recreational (ORV) pressures necessitate special efforts to safeguard this species and its habitat components.

See Forestry 2.1 for multiple use analysis and recommendation.

Note: Attach additional sheets, if needed

Step 3

Recommendation 1.39:

Allow no new mineral leases on public land adjacent to the Virgin River and Moapa (Muddy) River. Oil and gas development and new sand and gravel operations should be prohibited on public land adjacent to these rivers. These prohibitions should remain in effect until detailed environmental analyses or habitat management plans are completed which would analyze the effects of oil and gas leasing or sand and gravel operations on these rivers.

Support Needs:

Minerals.

Rationale:

The Virgin River from the Nevada-Arizona border to Lake Mead has been designated critical habitat for the endangered Woundfin (Plagopterus argentissimus). Several other species of native fish are found in this river. The headwaters of the Moapa (Muddy) River are critical habitat for the endangered Moapa Dace (Moapa coriacea). Several other species of native fish are also found in the Moapa River. These prohibitions are consistent with the Bureau's responsibilities regarding endangered species as outlined in the Endangered Species Act of 1973 and its amendments. These restrictions could be increased or eliminated depending on the analyses made in the EAs or HMPs.

See Minerals 1.1 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
RECONSTRUCTION OF LAND-USE DESIGN

State	Idaho
County	Blaine
Section	36
Range	14N
Township	14N
Other	

Background:
The Virgin River flows from the Nevada/Idaho border to Lake Mead and then discharges critical habitat for the endangered Humpback Chub (*Glyptothorax maculatus*). Several other species of native fish are found in this river. The headwaters of the Virgin (Hatch) River are critical habitat for the endangered Humpback Chub (*Glyptothorax maculatus*). Several other species of native fish are also found in the Hatch River. These prohibitions are consistent with the Bureau's responsibilities regarding endangered species as outlined in the Endangered Species Act of 1973 and its amendments. These restrictions could be increased or eliminated depending on the analyses made in the EIS or BIA.

Reconstruction of Land-Use Design:
This is a new design based on public land records on the Virgin River and Hatch (Hatch) River. It will give development and new land use a special status and be prohibited or limited to a certain extent. These prohibitions show a certain level of protection for critical habitat. The analysis of public land management plans was completed which would analyze the effects of all land use planning or such and special operations on these rivers.

Reconstruction of Land-Use Design:
Reconstruction

See Remarks: 1.1 for analysis and reconstruction.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Wildlife
Objective Number
WL-2

Objective 2.0:

Return native fauna to historic ranges and/or improve population numbers in current use areas through effective habitat management in cooperation with State or other Federal wildlife agencies. Increase species diversity and distribution of desired animals throughout the variety of habitat types in Clark County with special emphasis on Federal- and State-classified or BLM-identified sensitive species.

Rationale:

Bureau of Land Management policy is "to maintain a maximum diversity of wildlife species in sufficient numbers to meet public demands" (BLM Manual Section 1603.12D3(a)). It is anticipated that public demand for hunting, fishing, and general wildlife viewing experiences will continue to rise. To meet future demand for wildlife-related experiences, habitat expansion by animal species is necessary, not only for consumptive/nonconsumptive uses, but also for sustaining viable animal populations. The following legislation and policies provide the authority and mandates to accomplish the above objective.

- A. National Environmental Policy Act
- B. Taylor Grazing Act of 1934 as amended
- C. Public Land Administration Act of 1960
- D. Endangered Species Act of 1973
- E. Wild and Scenic Rivers Act of 1968
- F. Federal Land Policy and Management Act of 1976
- G. Sikes Act 1974, Title II
- H. Executive Order 11514, Protection and Enhancement of Environmental Quality
- I. Federal Regulations regarding cooperation with State for the preservation use and management of fish and wildlife resources (43 CFR 24)
- J. Departmental Policy established and approved by the Secretary of the Interior in August of 1966
- K. BLM Instruction Memorandum 80-225, 1980

Multiple Use Analysis

Increasing both numbers and ranges of wildlife species will serve to bolster the overall character of the Southern Nevada natural environment. It is important to note that current and historic habitats, or animal populations, were modified in the past as a result of resource-use decisions made by man. It is entirely possible that these same conflicts still exist and must be resolved prior to introductions or population increases.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT PLAN FOR THE
SOUTHERN MOUNTAIN WOLF

WOLF
COUNTY
WOLF
WOLF
WOLF

Executive Summary

The purpose of this plan is to provide a framework for the management of the Southern Mountain Wolf. The plan is based on the following principles: (1) the protection of the wolf as a species, (2) the protection of the wolf as a resource, and (3) the protection of the wolf as a symbol. The plan is designed to be flexible and adaptable to changing circumstances. It is intended to be a living document that will be updated as new information becomes available.

Introduction

The Southern Mountain Wolf is a rare and endangered species. It is found only in the Southern Mountains of the United States. The wolf is a member of the Canidae family and is closely related to the domestic dog. The wolf is a social animal and lives in packs. It is a skilled hunter and is capable of killing large prey. The wolf is a symbol of strength and courage. It is also a symbol of the wilderness. The wolf is a valuable resource and its protection is a priority for the Bureau of Land Management.

1. Purpose and Scope

The purpose of this plan is to provide a framework for the management of the Southern Mountain Wolf.

The scope of this plan is the Southern Mountains of the United States.

The plan is designed to be flexible and adaptable to changing circumstances.

The plan is intended to be a living document that will be updated as new information becomes available.

The plan is based on the following principles: (1) the protection of the wolf as a species, (2) the protection of the wolf as a resource, and (3) the protection of the wolf as a symbol.

The plan is designed to be flexible and adaptable to changing circumstances.

The plan is intended to be a living document that will be updated as new information becomes available.

The plan is based on the following principles: (1) the protection of the wolf as a species, (2) the protection of the wolf as a resource, and (3) the protection of the wolf as a symbol.

The plan is designed to be flexible and adaptable to changing circumstances.

The plan is intended to be a living document that will be updated as new information becomes available.

The plan is based on the following principles: (1) the protection of the wolf as a species, (2) the protection of the wolf as a resource, and (3) the protection of the wolf as a symbol.

The plan is designed to be flexible and adaptable to changing circumstances.

The plan is intended to be a living document that will be updated as new information becomes available.

2. Management Objectives

The management objectives for the Southern Mountain Wolf are as follows: (1) to protect the wolf as a species, (2) to protect the wolf as a resource, and (3) to protect the wolf as a symbol. The objectives are to be achieved through the following actions: (1) to monitor the wolf population, (2) to protect the wolf's habitat, and (3) to educate the public about the wolf. The objectives are to be achieved through the following actions: (1) to monitor the wolf population, (2) to protect the wolf's habitat, and (3) to educate the public about the wolf.

(Wildlife 2.0 continued)

Multiple Use Recommendation:

Accept the objective as written with the addition of the following:

Assure resource use conflicts are resolved prior to reintroduction to historic ranges or population increases.

Decision:

Accept objective as modified in MFP II.

Reasons:

One comment stated that habitat areas must be designated and hunting of the areas rotated on a yearly basis, as should be trapping. Native fauna, it was said, is being rapidly depleted due to mismanagement by an ignorant bureaucracy. In response, this concern does not necessitate a change in the language of the decision.

Step 1

Step 3

Recommendation 2.1:

Develop a Habitat Management Plan (HMP) for the Moapa (Muddy) River from the head-springs to Lake Mead.

All public land immediately adjacent to the Moapa River should be retained in public ownership until completion of the proposed HMP and a disposition recommended.

Support Needs:

Division of Operations, Cultural Resources.

Rationale:

Habitat Management Plans are the Wildlife Activity Plan component of the Bureau Planning System and the action program phase of the Bureau Wildlife Habitat Management System.

The Moapa River contains habitat for two species of native fish where it traverses public land. These species are the Moapa River Speckled Dace (Rhinichthys osculus moapae) and the Moapa River Roundtail (Gila robusta ssp.). The Moapa River Speckled Dace has been classified threatened by the American Fisheries Society (AFS) Endangered Species Committee. Also, the Moapa River has an overall rating as a "highest valued fishery resource" based on the Nevada Stream Evaluation Criteria Matrix. Completion of an HMP would be consistent with BLM policy in compliance with Executive Order 11988, Floodplain Management, May 24, 1977.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Step 1 Step 3

Recommendation 2.2:

Develop a Habitat Management Plan (HMP) for the Virgin River from the Arizona-Nevada border to Lake Mead. The HMP should be consistent with the Woundfin Recovery Plan. The priority species for the HMP should be the Woundfin (Plagopterus argentissimus). The HMP should also address the habitat of other fishes as well as waterfowl, upland game, and nongame bird habitat. The Virgin River is a candidate for designation as an Area of Critical Environmental Concern. All public land within the Virgin River floodplain should be retained in public ownership.

Support Needs:

Division of Operations, Cultural Resources.

Rationale:

Habitat Management Plans are the Wildlife Activity Plan component of the Bureau Planning System and the action program phase of the Bureau Wildlife Habitat Management System. The development of an HMP is an objective of the approved Woundfin Recovery Plan and is consistent with the Bureau's responsibilities regarding endangered species as outlined in the Endangered Species Act of 1973 and its amendments.

The Virgin River is one of the few continuous riparian areas with significant public land along it in Clark County. Through an HMP, the potential to improve the value of this area for many wildlife species would be greatly increased. Completion of an HMP would be in compliance with Executive Order 11988, Floodplain Management, May 24, 1977.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

Overlay Reference

Step 1

Step 3

Recommendation 2.3:

Develop a Habitat Management Plan for the Cold Creek-Willow Creek area.

Support Needs:

Division of Operations, Recreation, and Cultural Resources Programs.

Rationale:

Habitat Management Plans are the Wildlife Activity Plan component of the Bureau Planning System and the action program phase of the Bureau Wildlife Habitat Management System. Willow Creek is the only coldwater fishery resource in Clark County. According to the Nevada Stream Evaluation Criteria Matrix, Cold Creek has an overall rating as a "limited fishery resource" and Willow Creek has an overall rating as a "highest valued fishery resource."

The Cold Creek-Willow Creek area contains riparian habitat, which is very limited in Clark County. Human use has caused major adverse impacts at Cold Creek and Willow Creek, including destruction of streamside vegetation. This vegetation provides cover for fish and prevents the sun from warming the coldwater streams. The vegetation also provides habitat for many birds and small mammals. An HMP can help resolve these conflicts.

Executive Order 11988, Floodplain Management, of May 24, 1977, mandates BLM to reestablish damaged floodplain ecosystems, including streamside habitat, through project work and/or restriction, improved management, or elimination of uses creating the problem.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

Recommendation 2.4:

Work with Nevada Department of Wildlife to reintroduce desert bighorn into historic habitat. Allow extension of bighorn distribution into historic habitat where reintroductions are not necessary.

Support Needs:

Nevada Department of Wildlife.

Rationale:

In 1978, the BLM and NDOW cooperatively developed an action plan to maintain bighorn distributions in current habitat and expand bighorn distributions into historic habitat. Reintroduction sites were proposed in several ranges in Clark County. Releases may be needed in the McCullough, Bird Spring, north Spring Mountain, North Muddy, Sunrise, Dry Lake, and Newberry Ranges. Other areas may receive new or increased use through habitat management.

Reestablished populations would add to the potential for hunting and high quality sightseeing opportunities. A BLM-NDOW cooperative agreement requires BLM to cooperate with NDOW in transplant programs. NDOW input into Clark County planning recommends reintroducing bighorn into all suitable habitat.

Recommendation changed to Range Management 1.10.

Page 1

Step 1 Step 3

Recommendation 2.5:

As reintroduction or habitat expansion of bighorn sheep occurs into historic habitat, provide, at a minimum, the bighorn sheep perennial forage identified in Table WL-2.5 so as to achieve reasonable numbers of the animal. Along with reintroduction or habitat expansion, monitor forage utilization by all ungulate species and adjust numbers of competitive animals as necessary to obtain the allocation required to support bighorn sheep reasonable numbers.

Support Needs:
Range.

Rationale:

Section 102 of FLPMA (P.L. 94-579) requires BLM to provide food and habitat for fish, wildlife, and domestic animals. BLM Manual section 4111.31A requires consideration of wildlife demands before determining the amount of forage available to livestock. BLM Manual 4730.3 authorizes reducing livestock allocations but not wildlife allocations, to meet horse/burro needs.

BLM and NDOW have cooperatively identified the opportunity to expand bighorn into all historic habitat.

In addition, the desert bighorn has been designated by BLM as a sensitive species requiring special management consideration. Public interest in this animal has resulted in the formation of the Desert Bighorn Council and the Nevada Fraternity of Desert Bighorn. This management emphasis and public interest further justifies allocating forage to this historic, big game species.

Recommendation changed to Range Management 1.11.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Wildlife

Overlay Reference
Step 1 Step 3

Recommendation 2.6:

Develop and/or implement HMPs in these bighorn areas. Priority should be given to areas with severe conflicts.

Severe conflict areas:

Arrow Canyon Range
McCullough Range
Gold Butte Range

Other bighorn areas:

Highland
Eldorado
Newberry
New York-Castle
Bird Spring
South Spring
Red Rock
North Spring
Muddies
Sunrise
Dry Lake
Virgin Mountains

Support Needs:

All activities.

Rationale:

HMP development and implementation is an effective means of attaining management objectives and is authorized by BLM policy. HMPs allow special management consideration for sensitive species like bighorn as required. Policy, mandates, and authority include the Sikes Act, Sec. 201, and BLM Manual 6620.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wildlife
Overlay Reference	Step 1 Step 3

Recommendation 2.7:

Develop a Habitat Management Plan to resolve conflicts and benefit the elk population in the Spring Mountains. The HMP should be written by 1985, with on-the-ground projects completed within five years thereafter. Other wildlife needs, including mule deer, bighorn sheep, and wild turkey, should be addressed also.

Support Needs:

Division of Operations;
Wild Horse/Burro, Recreation,
Forestry, and Range programs.

Rationale:

More intensive management is needed to expand the present elk population (75 animals) to Nevada Department of Wildlife reasonable numbers or goal levels (200 animals). Lack of grass or meadow-like summer habitat, increasing human disturbance, and competition with wild horses and burros limit the present elk population. A comprehensive management plan identifying projects or other management actions needed to resolve conflicts would best facilitate intensive management. The projects associated with an HMP can benefit other wildlife species as well.

Policy, mandates, and authority include the Sikes Act, Sec. 201, and BLM Manual 6620.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

Note: Attach additional sheets, if needed

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Wildlife
Objective Number
WL-3

Objective 3.0:

Provide special management consideration on public lands within Clark County to protect and increase current populations of desert tortoise (Gopherus agassizi).

Rationale:

The desert tortoise is Federally-listed as threatened in Utah, State-listed as rare in Nevada, and classified by BLM as a sensitive species. Currently, its status in California, Arizona, and Nevada is being reviewed by the U.S. Fish and Wildlife Service (USFWS) for possible classification as a threatened species throughout its range in these states.

The Sikes Act of 1974, Section 202(c)(3)(D), provides protection for State-listed rare or threatened species.

The BLM Nevada State Director and the Director of the Nevada Department of Wildlife have agreed to list the desert tortoise as a BLM sensitive species. Accordingly, BLM is required to give the desert tortoise special management consideration in order to prevent the species from deteriorating to the point of becoming Federally-listed.

On August 20, 1980, the desert tortoise and its respective critical habitat on the Beaver Dam Slope Area were listed as threatened in Utah. Currently (1981) the desert tortoise and its respective critical habitats are being considered for proposed listing as a threatened species in Arizona, California, and Nevada. The Endangered Species Act does not require the BLM to initiate a "Section 7" consultation with the USFWS in regards to projects or activities which may affect proposed endangered or threatened species. However, in order to avoid later conflicts under Section 7, it is highly recommended and considered to be in the best interests of both the species and the BLM to initiate a voluntary and informal consultation with the USFWS. Furthermore, under Section 7, BLM is mandated to utilize its authorities to carry out an affirmative beneficial conservation program for listed species, and is prohibited from jeopardizing continued existence of those species or adversely modifying or destroying their critical habitat. Importantly, it is in the best interest of the BLM to initiate such programs because, if successful, they could lead to revision of the original USFWS biological opinion or delisting of critical habitat, thereby allowing for completion of the proposed projects or activity without violation of Section 7. Finally, under Section 7, BLM is required to consider not only the impacts of the particular project or activity on which consultation is being conducted, but also the cumulative effects of all activities or programs which may have similar impacts on a listed species or its habitat. In other words, consultation is not a piecemeal analysis of the impacts of individual projects or activities on endangered species and their habitats.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT PLANNING PLAN - STEP 1
ACTIVITY SUMMARY

Objective 2.2

Provide special management consideration on public lands within the County to protect and increase current biological diversity.

Background

The desert tortoise is federally-listed as threatened in Utah. It is listed as rare in Nevada, and classified by BLM as a sensitive species. Currently, the species is distributed in California, Arizona, and Nevada. It is being reviewed by the U.S. Fish and Wildlife Service (FWS) for possible critical habitat as a threatened species throughout its range in these states.

The BLM for NE 1414, Section 10S(4)37(D), provides protection for threatened taxa or threatened resources.

The BLM Nevada Field Director and the Director of the Nevada Department of Wildlife have agreed to list the desert tortoise as a BLM sensitive species. Accordingly, BLM is required to give the desert tortoise special management consideration in order to prevent the species from deteriorating to the point of becoming federally-listed.

On August 10, 1990, the desert tortoise and its respective critical habitat on the BLM Nevada Field Office were listed as threatened in Utah. Currently, the desert tortoise and its respective critical habitats are being considered for threatened listing on a threatened species in Arizona, California, and Nevada. The endangered species act does not require the BLM to initiate a Section 7 consultation when the FWS is required to protect or recover which may affect proposed endangered or threatened species. However, in order to avoid future conflicts under Section 7, it is highly recommended and considered to be in the best interests of both the species and the BLM to initiate a voluntary and informal consultation with the FWS. Furthermore, under Section 7, BLM is mandated to utilize the authorities to carry out an alternative land-use conservation program for listed species, and the prohibition from jeopardizing continued existence of those species or adversely modifying or destroying their critical habitat. Furthermore, it is in the best interests of the BLM to initiate such program because, if successful, they could lead to revision of the original BLM biological opinion of delisting of critical habitat, thereby allowing for completion of the proposed project of active water storage of Section 7. Finally, under Section 7, BLM is required to consult not only the interests of the particular project or activity on which consultation is being conducted, but also the cumulative effects of all activities or programs within any area. Since impacts on a listed species or its habitat are often cumulative, consultation is not a piecemeal analysis of the impacts of individual projects or activities on endangered species and their habitat.

(Wildlife 3.0 continued)

Multiple Use Analysis

The desert tortoise has been strongly impacted in Southern Nevada by the activities of man. Placing the Clark County population of desert tortoise on either the Federal threatened or endangered lists would severely impact all of BLM's local resource management programs. The use restriction inherent in those new directions would severely strain the District's working relationships with its publics. Special management considerations employed now may offset more stringent requirements in the future.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

UNITED STATES

Step 1 Step 3

Recommendation 3.1:

Restrict oil and gas exploration, especially seismic activity using vehicles or explosives, in identified crucial tortoise habitat to existing roads, trails, and washes. Limit exploration to the time of the year when the tortoise is in hibernation, October through February. See Distribution of Desert Tortoise and Oil and Gas Leases in Desert Tortoise Habitat URA III Overlays.

Support Needs:

Minerals program.

Rationale:

In the Virgin Valley Planning Unit, 85 miles of oil and gas seismic lines traverse 493 square miles of crucial desert tortoise habitat. Off-road vehicle travel or other activities by seismic crews impact desert tortoise by killing or maiming, collapsing burrows, and destroying vegetation which provides food and cover. These impacts would be minimized if the recommendation is enforced. 43 CFR 8364.1 authorizes temporary closures.

See Minerals 1.1 for multiple use analysis and recommendation.

Step 1 Step 3

Recommendation 3.2:

Limit oil, gas, and geothermal development within crucial desert tortoise habitat by enforcing the following six protective measures:

1. Limit the size of the area disturbed during drilling operations to only the minimum necessary to do the job.
2. Where feasible, limit access to drill sites to existing roads and trails.
3. Limit drilling to the time of the year when the tortoise is in hibernation (October through February).
4. After well abandonment, access roads created for use during drilling will be rendered inaccessible to motorized vehicles.
5. As soon as is feasible all areas denuded (access roads, drill sites) will be seeded with native shrubs, grasses, and forbs, or any other measures that may be needed to successfully reclaim the areas.
6. Coordination with District wildlife personnel will be made prior to initiation of any development activity.

Support Needs:

Minerals program.

Rationale:

Thirty-nine percent (104 square miles) and 83 percent (408 square miles) of the desert tortoise crucial habitat in the Stateline and Virgin Valley Planning Units, respectively, already have oil and gas leases issued. Development in these areas would impact desert tortoise in the following ways: habitat and animals could be lost from construction of new roads, drill pads and sumps; increased collecting and killing of tortoises from additional access provided by roads and resultant increased vehicle use. Such impacts could be minimized if the protective measures are instituted.

Name (MFP)	Clark County
Activity	Wildlife
Overlay Reference	Step 1 Step 3

Recommendation 3.3:

Discourage the development of new roads and trails in crucial desert tortoise habitat. See Distribution of Desert Tortoise URA III Overlay for locations of crucial habitat.

Support Needs:

All programs.

Rationale:

A 1978 study showed that within a kilometer (.58 miles) of paved roads, desert tortoise populations are detrimentally impacted. Similar impacts occur on dirt roads depending on traffic volume. There are 1.41 miles and .83 miles of roads and trails per square mile of crucial habitat already existing in the Stateline and Virgin Valley Planning Units, respectively. Additional intrusions may result in significant population reductions from loss of animals by vehicular collision, passerby collection, and loss of habitat and animals from road construction. BLM Manual 6511.21B states that special care must be taken to insure that road and trail construction does not cause deterioration or loss of wildlife habitat or cause physical hazards to wildlife.

See Wildlife 1.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
WILDLIFE-AND-VISITOR-IMPACT

Project Name	Wildlife
Project Number	1000
Project Date	10/1/00

Recommendation 1.1

To increase the development of new roads and trails in critical areas of visitor impact, the Bureau of Land Management should develop a plan for the development of new roads and trails in critical areas of visitor impact.

Recommendation 1.2

To increase the development of new roads and trails in critical areas of visitor impact, the Bureau of Land Management should develop a plan for the development of new roads and trails in critical areas of visitor impact. This plan should include a detailed description of the areas of visitor impact, a list of the roads and trails that are currently in use, and a list of the roads and trails that are planned for future development. The plan should also include a detailed description of the areas of visitor impact, a list of the roads and trails that are currently in use, and a list of the roads and trails that are planned for future development.

Step 1 Step 3

Recommendation 3.4:

Prohibit competitive ORV use in crucial desert tortoise habitat. Limit competitive ORV use in non-crucial tortoise habitat to existing roads and designated trails and washes. Limit competitive use in non-crucial areas to the time of the year when the tortoise is in hibernation, October through February. See Distribution of Desert Tortoise and 1975 ORV Use Classifications in Desert Tortoise Habitat URA III Overlays.

Support Needs:

Recreation program.

Rationale:

Approximately 40 percent (311 square miles) of the crucial tortoise habitat in Clark County is presently managed as open to unrestricted ORV use. Limiting competitive use in non-crucial areas would minimize further habitat degradation into the crucial category, thus requiring stronger restrictions on use. Unrestricted ORV use has been well documented as being especially detrimental to desert tortoise populations. Enforcement of the recommendation would minimize the impacts to desert tortoise.

See Recreation 6.4 for multiple use analysis and recommendation.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Wildlife
Overlay Reference	
Step 1	Step 3

Recommendation 3.5:

Eliminate livestock (cattle and domestic sheep) grazing during March through May in crucial desert tortoise habitat. Table WL-3.5 shows the affected allotments in each Crucial Desert Tortoise Area.

Support Needs:
Range.

Rationale:

A two-year study on the Beaver Dam Slope of Arizona showed a 40 percent dietary overlap between cattle and tortoises for annual forbs and grasses in a poor rainfall year and as high as 80 percent in a good rainfall year. Even though dietary overlap in dry years is lower, the competition between tortoises and cattle may be more intense than indicated by the index of dietary overlap. Spring annual forbs and grasses contain the essential nutrients necessary to sustain reproduction (egg production, etc.). Reproduction may be suppressed when these spring annual forbs and grasses are nonexistent or present in insufficient quantity. If suppressed reproduction continues for two or more years, the tortoise population, which naturally has a low recruitment and a long maturation period, could be adversely affected, in the long run to the point of extinction, by insufficient reproduction.

BLM Manual 4111.31A states that the availability of land for grazing use, and the amount of forage available for use by livestock, will be determined after giving consideration to wildlife demands. BLM Manual 4112.11A4e states that, when justified by local conditions, livestock can be excluded during any season from wildlife range. BLM Manual 4121.31A.4 states that on ephemeral ranges short-term leases will be issued for those areas where no conflicts exist.

See Range Management 1.9 for multiple use analysis and recommendation.

Step 1 Step 3

Recommendation 3.6:

In crucial desert tortoise habitat, eliminate domestic sheep grazing of the same use areas two years in succession and limit them to a single pass through any given use area in any one grazing season. Table WL-3.6 shows the affected allotments in each Crucial Desert Tortoise Area.

Support Needs:

Range program.

Rationale:

A 1978 study in the western Mojave Desert showed that impacts to desert tortoise habitat from sheep grazing are particularly severe. In one pass through an area, sheep removed 60 percent of annuals in the coppice mounds of creosote bushes and trampled 24 to 28 percent of the annuals in the intershrub areas. In areas where sheep graze frequently, bedding or water sites, the reduction in annuals was much more severe. Sheep also reduced the cover of perennial shrubs of such species as burrobrush and spiny hopsage by 16 to 19, and 29 percent, respectively.

BLM Manual 4111.31A states that the availability of land for grazing use, and the amount of forage available for use by livestock will be determined after giving consideration to wildlife demands.

BLM Manual 4112.11A4e states that when justified by local conditions, livestock can be excluded during any season from wildlife range. BLM Manual 4121.31A.4 states that on ephemeral ranges short-term leases will be issued for those areas where no conflicts exist.

Multiple Use Analysis

Eliminating domestic sheep grazing in the same use area two years in a row would limit livestock grazing operations, particularly in years of good ephemeral production. On the other hand, making more than one pass in a given season would severely limit availability of ephemeral forage in that area to wildlife.

(Wildlife 3.6 continued)

Conflicts involving trailing and domestic-bighorn sheep use in the Bunkerville, Gold Butte, and Billy Goat Peak allotments will be addressed through the CRMP process prior to FY83 (Wildlife 1.20). This use conflict could also be addressed at that time. The same is true of the Christmas Tree Pass allotment (Wildlife 1.21). Sheep use is to be eliminated from the McCullough Mountain (Wildlife 1.19) and Newberry Mountain allotments (Wildlife 1.22).

Multiple Use Recommendation:

In desert tortoise crucial habitat, limit domestic sheep to a single pass through any use area in any one grazing season. Inspect sheep use areas annually to determine if perennial forage species are being unduly impacted. Adjust use as necessary. Resolve sheep-desert tortoise conflicts on Bunkerville, Gold Butte, Billy Goat Peak, and Christmas Tree allotments during the CRMP process.

Reason:

The multiple use recommendation protects crucial tortoise habitat but still allows domestic sheep grazing in consecutive high ephemeral forage production years.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the MFP II recommendation as written.

Step 1 Step 3

Recommendation 3.7:

Develop and implement HMPs in the following sequence for the following Desert Tortoise Crucial Areas. Areas with (*) should be identified as ACEC.

C-DT-5	Virgin Mountain*
C-DT-11	Piute Valley*
C-DT-8	Goodsprings*
C-DT-1	Moapa*
C-DT-2	Arrow Canyon*
C-DT-3	California Wash*
C-DT-9	Sheep Mountain
C-DT-10	Eldorado Valley
C-DT-6	Horse Spring Wash
C-DT-4	Riverside
C-DT-7	Redrock

Support Needs:

Division of Operations, All activities.

Rationale:

Preparation and implementation of HMPs is consistent with Bureau policy. An ACEC is an area "within the public lands where special management attention is required (when such areas are developed or used or where no development is required) to protect and prevent irreparable damage to important historic, cultural, or scenic values, fish and wildlife resources or other natural systems or processes, or to protect life and safety from natural hazards" (Sec. 103(a), FLMA).

Only six of the 11 desert tortoise crucial areas are being recommended to be identified as ACECs. These six areas are large enough to protect and intensively manage the desert tortoise populations within.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Recreation
Objective Number
P-1

Objective 1.0:

Manage all formally designated recreation lands and natural areas in Clark County to prevent or minimize degradation of the resource values for which the areas were set aside. Designate any additional areas found to be worthy through study or inventory, by the Bureau of Land Management or cooperating agencies. Provide compatible recreation opportunities where desirable or feasible, and enhance management of the areas through public education and interpretation to improve recreation opportunities.

Rationale:

Numerous areas in the county have received special designations and must be managed accordingly. The Code of Federal Regulations, 43 CFR 6200.0-6, indicates that lands with significant natural values may be designated and segregated. The BLM Manual 1603.12C2c acknowledges the BLM's role in environmental protection and specifically discusses the preservation and protection of national values.

Some deterioration of these values has occurred up to this time. These areas should be managed so as to provide continued public use in a manner that assures maintenance of the quality of the site. Preservation of areas for scientific and educational use is also important.

Multiple Use Analysis

This objective conforms with Bureau policy and the requirements of the various designation orders. It is important that unqualified areas not be continued or designated so as not to cheapen the really valuable areas. It is equally important to facilitate designation processes to avoid eliminating other multiple uses while awaiting a decision on an area.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Modify the objective to read as follows: Manage all formally designated recreation lands and natural areas in Clark County to prevent or minimize degradation of the resource values for which the areas were set aside. Designate additional areas found to be worthy through study or inventory by the Bureau of Land Management or cooperating agencies. Provide compatible recreation opportunities where desirable or feasible, and enhance management of the areas through public education and interpretation to improve recreation opportunities.

Reasons:

One comment stated that the word "any" should be removed from the second sentence (following the word "designate"). "Any" indicates that all identified areas would have to be designated as recreation lands and natural areas. In response, the BLM agrees. "Any" has been deleted. This meets the goals and objectives of public land management. Failure to delete the word "any" would limit flexibility of management. While many additional areas may be found worthy, it may not be practical to designate all of them.

Step 1 Step 3

Recommendation 1.1:

Protect and manage the following Natural Areas for their scenic, scientific, botanical, geologic, and educational values. Develop an information base on the Natural Areas for use in interpretive efforts and to gain a better understanding of the ecology of the areas. Develop and implement a Recreation Resource Monitoring System to provide protection through use supervision and to monitor the condition of the recreation-related natural resources present.

- a) Pine Creek Research Natural Area
- b) Desert View Natural Environmental Area

Support Needs:

All Divisions of Las Vegas District Office.

Rationale:

According to 43 CFR 8223, Management of Natural Areas, use should be limited to the extent necessary to preserve scientific and educational values. In addition, under 43 CFR 2071.1, a natural environmental area also includes a "natural setting suitable for recreation... usually in combination with other uses." Protection of these areas in their existing condition will insure the continued values of these areas for the aforementioned reasons.

Multiple Use Analysis

No conflicts were identified.

The Pine Creek Research Natural Area is located within Red Rock Canyon Recreation Lands and the Desert View Natural Environmental Area is located along the Lee Canyon Road. Their designation as Natural Areas, as per the CFR, necessitates managing the areas as recommended.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

The nature of the values in and the location of these areas require intense management of the type that will allow for optimum recreational and research use while maintaining the integrity of natural area values.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
WYOMING-UTAH-ARIZONA

Background
According to 16 CFR 32.21, management of National Forests, now known as National Forest System, was established in 1908 by the National Forestry Act. In addition, under the 1908 Act, a national system of public lands was established. The system also included a "national system" of public lands for recreation, and a "national system" of public lands for other uses. The protection of these lands in their existing condition will insure the continued values of these lands for the national system.

Background
The purpose of this plan is to provide a framework for the management of the National Forest System lands in the United States. The plan is based on the following principles: (1) The National Forest System lands are to be managed for the benefit of the people of the United States; (2) The National Forest System lands are to be managed in accordance with the National Forest Management Act; (3) The National Forest System lands are to be managed in accordance with the National Forest Management Plan; (4) The National Forest System lands are to be managed in accordance with the National Forest Management Plan; (5) The National Forest System lands are to be managed in accordance with the National Forest Management Plan.

1. The National Forest System lands are to be managed for the benefit of the people of the United States.

2. The National Forest System lands are to be managed in accordance with the National Forest Management Act.

Background

The National Forest System lands are to be managed for the benefit of the people of the United States. The National Forest System lands are to be managed in accordance with the National Forest Management Act. The National Forest System lands are to be managed in accordance with the National Forest Management Plan. The National Forest System lands are to be managed in accordance with the National Forest Management Plan.

Background
The purpose of this plan is to provide a framework for the management of the National Forest System lands in the United States. The plan is based on the following principles: (1) The National Forest System lands are to be managed for the benefit of the people of the United States; (2) The National Forest System lands are to be managed in accordance with the National Forest Management Act; (3) The National Forest System lands are to be managed in accordance with the National Forest Management Plan; (4) The National Forest System lands are to be managed in accordance with the National Forest Management Plan; (5) The National Forest System lands are to be managed in accordance with the National Forest Management Plan.

Step 1	Step 3

Recommendation 1.2:

Remove the "Outstanding Natural Area" status from Sunrise Mountain and redesignate it as a "recreation lands," recognizing its potential for intensive recreation use in the long-term future. Prepare a Recreation Area Management Plan (RAMP) in 1985 with the possibility of adjusting the existing boundaries to include Rainbow Gardens. In the interim, manage both areas as a single unit.

Support Needs:

District Recreation staff; assistance from the Lands staff; Federal Register notification.

Rationale:

Lack of supporting data as well as current conditions make the continued designation of 10,240 acres in the vicinity of Sunrise Mountain as a "Natural Area" questionable. Calling the area "Natural" has subjected the BLM to ridicule, and cheapens the effect of the designation when used elsewhere.

However, Sunrise and the area to the south, Rainbow Gardens, do contain excellent geological sightseeing features, several semi-developed trails, and some desert botanical values. The area is currently receiving intensive recreational use and as the population of Las Vegas becomes more urbanized, the value of this area for an urban or regional park will steadily increase. This idea of an urban park is currently a key concept of the Clark County Wetlands Master Plan. A vital step to initiate this plan is the acquisition of land use through an R&PP lease from the BLM.

Multiple Use Analysis

The Sunrise Mountain Natural Area is located on the fringes of the Las Vegas City limits. Its outstanding features are primarily geological, with some botanical features noted. Due to the area's proximity to Las Vegas and ready accessibility, its current use is intense and involves off-roading and target shooting. Utility powerlines traverse the area. Much of the area, primarily along Lake Mead Boulevard, is unsightly due to illegal dumping. To adequately manage the area as "natural" would require intense management that would prove to be too costly, particularly at the expense of other high priority areas.

(Recreation 1.2 continued)

Multiple Use Recommendation:

Modify recommendation to read as follows: Remove the "outstanding natural area" designation for Sunrise Mountain and have these lands fall into the multiple-use management category with an emphasis on recreation use. Recognizing existing and future intensive recreation use, prepare, by 1985, a Recreation Area Management Plan (RAMP) for the area, adjusting the boundary for the RAMP as research/needs dictate. The RAMP will be considered and coordinated with other resource activity plans on the area.

Support Needs:

As stated in MFP 1.

Reason:

The Sunrise/Frenchman Mountain area's existing use is recreational in nature. None the less, the area's proximity to a rapidly growing major metropolitan area necessitates that the BLM consider all resources available and manage these lands for their multiple-use resource potential. To manage this area as "natural" would require intense management similar to that at RRCRL and, at this point in time, this is an unreasonable requirement.

Alternatives Considered:

1. Continue present management.
2. Manage as "recreation land."

Decision:

Modify the MFP II recommendation as follows:

Remove the "outstanding natural area" designation for Sunrise Mountain and have these lands fall into the multiple-use management category with an emphasis on recreation use. Recognizing existing and future intensive recreation use, prepare, when use levels warrant, a Recreation Area Management Plan (RAMP) for the area, adjusting the boundary for the RAMP as research/needs dictate. The RAMP will be considered and coordinated with other resource activity plans on the area. The Sunrise Mountain and Frenchman Mountain areas can be disposed of under the R&PP Act for geological studies and research.

Reasons:

One comment suggested that there is an inconsistency in removal of the designation and managing for "high geological" opportunities. The removal of the "outstanding natural area" designation does not, however, preclude enhancing the sightseeing and educational activities through the preparation of a RAMP.

Another comment seemed to suggest that there was no explanation for BLM's proposal to remove the designation. However, the MFP does adequately discuss the rationale.

Disposal through the R&PP process to UNLV has already been explored. The disposal would be for geological research purposes and would, therefore, protect the value the area may have for these unique public recreation uses.

Step 1	Step 3

Recommendation 1.3:

Protect and manage the Virgin Mountain Natural Area, which encompasses features representative of three major North American desert life zones, for its scientific values. Develop an information base on the Natural Area for use in interpretive efforts and to gain a better understanding of the ecology of the area. Develop and implement a Resource Monitoring System to provide protection through use supervision and to monitor the condition of the recreation-related natural resources present. Manage the contiguous acreage, including Whitney Pockets, which has archeological and geological values worthy of preserving, and the Natural Area as a single unit. Prepare an RAMP on this area during fiscal years 1987 to 1992.

Rationale:

The Virgin Mountain National Area was designated for the protection of vegetation and ecosystems where three desert life zones overlap. The Virgin Mountains (including the Natural Area and Whitney Pockets) were identified during the wilderness inventory as a prime recreation area with superlative resource values, by a number of user groups. Interest in retaining these values is extremely high. Use in either area is not expected to increase dramatically in the foreseeable future (2-5 years), but with the rapid growth Southern Nevada is undergoing, use patterns could change very rapidly.

Support Needs:

District Recreational staff, and all supporting District personnel as needed.

Multiple Use Analysis

No conflicts were identified.

The Virgin Mountain Natural Area encompasses most of the higher elevations of the Virgin Mountains. Access to the area is fair. There is a potential for indiscriminate resource use. Whitney Pockets is a highly valued archeological area currently used for recreational purposes. There is the potential for further degradation of the archaeological site. The area between the Natural Area and Whitney Pockets is mountainous and its existing use involves primarily livestock grazing and recreation. Residents of Mesquite view the Virgin Mountain area as an important recreation area.

(Recreation 1.3 continued)

Multiple Use Recommendation:

Modify the recommendation as follows: Protect and manage the Virgin Mountain Natural Area as per guidelines contained in the CFR and manage Whitney Pockets for its recreation and archaeological use and potential. In essence, manage both units as a single unit, but the contiguous area between the Natural Area and Whitney Pockets is not included as part of the management unit. Develop an information base on the Natural Area and Whitney Pockets, and develop and implement a resource monitoring and visitor service system. If use warrants, prepare an RAMP on the area. Coordinate the RAMP with other activity plans.

Support Needs:

As stated in MFP 1.

Reason:

The Virgin Mountain Natural Area and Whitney Pockets are recognized as having significant recreational and archaeological values. They are susceptible to resource damage. The contiguous area (which would basically encompass the entire Virgin Mountains) has other resource values to consider.

Considering the entire area's current use and no indication of immediate heavy growth in recreation use, encumbering the entire area with a target toward recreational use would not serve the needs of the public nor fit into multiple use guidelines.

Alternative Considered:

Develop an RAMP immediately.

Decision:

Accept the MFP II recommendation as written.

Reason:

One comment requested clarification of the meaning of "recreation and archaeological use and potential" of the Whitney Pockets. It is felt that the body of the MFP adequately explains this.

Step 1	Step 3

Recommendation 1.4:

Develop and implement a Recreation Resource Monitoring System to provide protection through use supervision and to monitor the condition of the recreation-related natural resources present on the following areas. Evaluate their suitability for designation as natural environmental areas (botanical sightseeing) and complete designation, if warranted, by 1985. Develop an environmental assessment (EA) as the principal analysis tool.

- a. Piute Valley--Joshua Tree Forest Proposed Natural Area
- b. Cottonwood Cholla Proposed Natural Area
- c. Potosi Barrel Cactus Proposed Natural Area
- d. Paradise Valley Proposed Natural Area

Add appropriate protective stipulations to permits issued for the area to assure that the vegetation and the visual environment is not degraded.

Support Needs:

Designation, cadastral survey, multi-disciplined EA team.

Rationale:

All four areas have been identified in the URA as having outstanding botanical representation in an aesthetically-pleasing environment. Designation as natural areas or continued research to acquire additional information for determining the areas' potential as natural environmental areas (botanical sightseeing), and the use of protective stipulations would help preserve the unusual botanical qualities of these areas. The identified boundaries for designation are somewhat flexible as further surveys are needed to make sure the areas correspond closely with prime habitat.

Multiple Use Analysis

Principal conflicts with the protection of these resource areas comes from surface-disturbing activities such as construction, mineral operations, rights-of-ways, and fire. The recent upsurge in "cactus-napping" could also endanger the botanical areas. The four areas have been under a natural

BUREAU OF LAND MANAGEMENT**

**MANAGEMENT PLAN
FOR THE _____**

Introduction

All four areas have been identified as potential resources for the future. The first area is located in the northwestern corner of the project area. It is a relatively small area, but it contains a number of important features. The second area is located in the northeastern corner of the project area. It is a larger area, and it contains a number of important features. The third area is located in the southwestern corner of the project area. It is a relatively small area, but it contains a number of important features. The fourth area is located in the southeastern corner of the project area. It is a larger area, and it contains a number of important features.

- Management Plan
1. The first area is located in the northwestern corner of the project area. It is a relatively small area, but it contains a number of important features. The management plan for this area is to protect the existing vegetation and to prevent any further development.
 2. The second area is located in the northeastern corner of the project area. It is a larger area, and it contains a number of important features. The management plan for this area is to protect the existing vegetation and to prevent any further development.
 3. The third area is located in the southwestern corner of the project area. It is a relatively small area, but it contains a number of important features. The management plan for this area is to protect the existing vegetation and to prevent any further development.
 4. The fourth area is located in the southeastern corner of the project area. It is a larger area, and it contains a number of important features. The management plan for this area is to protect the existing vegetation and to prevent any further development.

The management plan for the project area is to protect the existing vegetation and to prevent any further development. This plan is based on the following principles:

- To protect the existing vegetation and to prevent any further development.
- To maintain the natural resources of the project area.
- To provide for the future needs of the project area.

Project Objectives

The project objectives are to protect the existing vegetation and to prevent any further development. This project is a part of the larger project area, and it is designed to protect the natural resources of the project area.

Project Description

The project area is located in the northwestern corner of the project area. It is a relatively small area, but it contains a number of important features. The project area is designed to protect the existing vegetation and to prevent any further development. The project area is a part of the larger project area, and it is designed to protect the natural resources of the project area.

(Recreation 1.4 continued)

area proposal since the prior MFPs in Stateline and Virgin Valley were published in the early 1970s. Being nominated but never evaluated and designation acted upon, can give management pause when considering other multiple use proposals for these areas.

Multiple Use Recommendation:

Accept recommendation as written except complete evaluation and designation process by 1985.

Reason:

Unwarranted delay robs the areas of appropriate protection if they do rate it; it blocks other multiple uses if they don't.

Support Needs:

As stated in MFP 1.

Alternative Considered:

Drop from further consideration.

Decision:

Accept the MFP II recommendation as written.

Step 1	Step 3

Recommendation 1.5:

Manage the 4,930-acre Virgin River Recreation Lands for their open-space, wildlife, and river-access values as they relate to recreation. Develop an information base for use in interpretive efforts and to gain a better understanding of the ecology and potential uses of the area. A reevaluation of the use should be considered during mid-life of this MFP (1985-86). If a significant increase in visitor use or demand has occurred, an RAMP should be developed for the area.

Rationale:

These Recreation Lands were designated in 1970 to preserve waterfowl habitat and rare and unusual plants along the Virgin River, with the plan of eventually developing wildlife and hunting values. The lands are presently receiving low use, but do assure the public access to the river for hunting, wildlife observation, and other recreational activities.

Support Needs:

All Divisions of the District staff as needed.

Multiple Use Analysis

The Recreation Lands are formally designated, but have a small use factor. They obviously provide an important recreation site to Virgin River Valley residents. As future constraints in travel grow, this area could become an important recreation site in Southern Nevada.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

Continued management of these lands in accordance with their designation serves important recreational purposes in the Virgin River Valley and in Southern Nevada, now and in the future.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Withdraw designation.
2. Plan for development immediately.

Decision:

Accept the recommendation as written.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Recreation
Overlay Reference	
Step 1	Step 3

Recommendation 1.6:

Manage the Red Rock Canyon Recreation Lands as set forth in the 1975 Environmental Impact Statement and the 1977 Master Plan. This plan serves in lieu of a BLM-prepared RAMP. Several major programs are focused on responding to the interests of the public, as well as to provide proper management of the 62,000-acre area. Phase in proposed sections of the Master Plan and the Visitors Services Plan as funding, staffing, and public demand warrant. Treat the Master Plan as an ever-changing dynamic tool.

See Table R-1.6 delineating the proposed activities and planned accomplishments for the RRCRL during the next five years.

Support Needs:

All District personnel, Nevada State Office personnel when needed, Nevada State Parks staff, and Denver Service Center staff (DSC) as needed, city and county agencies.

Rationale:

The RRCRL were designated in 1967. The present management philosophy grew out of broad public interest in an early master plan. All during the 1970s, as the EIS and master plan were prepared, public interest, Bureau direction, and local government continued to evidence strong support for recreational management of these lands. In 1979-80, controversy and public interest over proposed oil and gas leasing activities within the boundaries reaffirmed the direction of managing these lands as a prime recreation area, with few, if any competing uses.

Multiple Use Analysis
(Includes Recreation 1.7)

The Red Rock Canyon Recreation Lands (RRCRL) is an important recreation area, located only 10 miles from Las Vegas proper, that sees extensive visitor use throughout the year. Local residents feel strongly about maintaining this area solely as a recreation area. This was evidenced by the intense public interest and controversy generated over the oil and gas leasing recommendations made by the BLM in 1980. The Master Plan for RRCRL was developed in the early 1970s.

Acquisition of, as yet, undeveloped lands within and abutting the boundary of RRCRL would facilitate management of the area. These private lands are valuable for potential development due to their location, and acquisition by BLM would ensure that disrupting development on these private lands and subsequent destruction of the integrity of the recreational and aesthetic values of the RRCRL, would not occur.

(Recreation 1.6 continued)

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

The RPCRL is a highly valued recreation area. Use other than that having recreational value would not be beneficial to the public or BLM.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

Step I	Step 3

Recommendation 1.7:

Pursue negotiations with Summa Corporation to accomplish an exchange of private lands within and adjacent to Red Rock Canyon Recreation Lands. The desired lands and their priority of exchange are shown below.

1. Sec. 7, T.21S., R.59E.,
NE1/4, NW1/4, Sec. 18, T.21S.,
R.59E.
N1/2, NE1/4, Sec. 18, T.21S.,
R.59E.
2. S.1/2, Sec. 19, Sec. 30, 31,
T.20S., R.59E.
3. W1/2, Sec. 8, T.21S., R.59E.

Support Needs:

Lands, Appraisal

See Recreation 1.6 for multiple use analysis and recommendation.

Rationale:

Acquisition of parcel #1 would protect the integrity of the approach to the recreation land. As it stands now, there is great potential for residential development of areas immediately adjacent to the Visitor Center, thus severely disrupting the aesthetic values inherent in the canyon.

Acquisition of parcel #2 would protect the highly-valued cultural resources in Brownstone Canyon.

Acquisition of parcel #3 would reinforce the benefits of parcel #1.

Step 1

Step 3

Recommendation 1.8:

Manage the 9,000-acre Las Vegas Dunes Off Road Vehicle (ORV) Play Area, a designated recreation lands, for its recreational ORV values. Prepare a Recreation Area Management Plan (RAMP) for the Dunes in conjunction with a portion of the Dry Lake Valley ORV area. Complete RAMP (to include EA) during FY84.

Support Needs:

Multi-disciplinary Team.

Rationale:

The area was identified and designated in 1970 for its value as an ORV play area close to the city. The 1975 "Programmatic Environmental Analysis of ORV Use in the Dry Lake Valley Area" found the area suitable for such use. In 1980, the area became the location for a series of 15-20 annual motocross events. Every spring, the Mint 400 dune-buggy race crosses over this area and attracts some 15,000 spectators to the Dunes. Other individual and group use is also extensive.

The RAMP would not be lengthy, since major developments would not be required. Staff time in the area would increase slightly. Benefits would accrue, however, in the form of favorable public reaction and perhaps, increased use of the area. Use might be attracted to the Dunes, reducing pressure on the nearby areas of Sunrise Mountain and Rainbow Gardens. The exact boundary for the area would be determined as part of the RAMP process.

Multiple Use Analysis
(Includes Watershed 4.4)

The Las Vegas Dunes is an intensively used ORV recreation area. The "MINT 400" ORV race course traverses the area. This is where the majority of the 50,000-60,000 spectators congregate. Casual individual ORV use is high, concentrated primarily on the weekends and during the fall and spring months. ORV clubs use the area frequently for club events. Sand dunes, by their very nature, are fragile watershed areas that cannot be rehabilitated due to low precipitation and very sparse vegetation. However, Watershed 4.4 supports ORV use in this area to offset soil degradation in more critical areas. An RAMP on this area would enhance its use by the public and provide better overall management.

Section 1.1: Recreation Management Plan

The purpose of this plan is to provide a framework for the management of public lands in the Southwest. It is based on the principles of sustainable use and the protection of natural resources. The plan is designed to be flexible and adaptable to changing circumstances. It is intended to guide the development and implementation of recreation management plans for individual areas within the region.

Section 1.2: Recreation Management Plan

The plan is based on the principles of sustainable use and the protection of natural resources. It is designed to be flexible and adaptable to changing circumstances. It is intended to guide the development and implementation of recreation management plans for individual areas within the region. The plan is based on the principles of sustainable use and the protection of natural resources. It is designed to be flexible and adaptable to changing circumstances. It is intended to guide the development and implementation of recreation management plans for individual areas within the region.

It is intended to guide the development and implementation of recreation management plans for individual areas within the region.

(Recreation 1.8 continued)

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

See Multiple Use Analysis.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Undesignate to protect watershed.
2. Eliminate competitive and large group use.

Decison:

Accept the recommendation as written.

See also Recreation 6.4.

Multiple Use Analysis

Existing uses in the riparian area are not all of the type that are compatible with a designated scenic area. Several of these uses have been identified. Minor increases in the area. Currently, resources of the area appear to be able to sustain the existing uses. Designation of the area as a scenic area is being considered as a means of providing a more permanent basis for the management of the area and as a means of providing a more permanent basis for the management of the area.

Multiple Use Management:

Multiple use management is a study program to determine if any valuable values in the riparian area need special management consideration or protection. Until the study is completed, follow current management practices.

Reason:

Until a study of the area is complete and shows the need for protection against deterioration and minor resource damage or a need for special management consideration, it is necessary to manage the area under multiple use guidelines.

Alternatives Considered:

1. Design the area as a scenic area and provide protection against deterioration.
2. Do not allow for a study of the area and manage under current practices.

Step 1	Step 3

Recommendation 1.9:

Protect and manage any and all resource values contiguous to the National Scenic Area identified by the California Desert Conservation Area (CDCA), BLM, Riverside District on the California side of the state line. Initiate a study program to determine the potential expansion of the Scenic Area boundaries into Nevada. Add appropriate stipulations to permits issued for the area to protect the area from any distraction which might influence the California side.

Support Needs:

All Divisions of the District Office, the CDCA staff, and the Nevada State Office.

Rationale:

The National Scenic Area identified on the California side of the state line represents a unique botanical sightseeing area. The protection of the adjacent Nevada acreage is important to the integrity of the National Scenic Area. The study program will determine whether or not an extension of the project into Nevada is warranted.

The California area was designated through Federal Register Notice on January 16, 1981, under the authority of Sec. 601, P.L. 94-579 (FLPMA) and 43 CFR 8352.0-6.

Multiple Use Analysis

Existing uses in the contiguous area are not all of the type that are compatible with a designated scenic area. Several ORV races occur here each year. Mining interests have increased in the area. Currently, resources of the area appear to be able to sustain the existing uses. Designation of the area based solely on its being contiguous to a designated scenic area would prove to be controversial and not in the best interests of multiple-use resource management guidelines.

Multiple Use Recommendation:

Initiate a study program to determine if any resource values in the contiguous area need special management consideration or protection. Until the study shows otherwise, follow current management practices.

Support Needs:

As stated in MFP 1.

Reason:

Until a study of the area is complete and shows the need for protection against indiscriminate and undue resource damage or a need for special management consideration, it is necessary to manage the area under multiple use guidelines.

Alternatives Considered:

1. Manage the contiguous area as having outstanding scenic value.
2. Do not allow for a study of the area and manage area under current practices.

BUREAU OF LAND MANAGEMENT
NATIONAL MONUMENT PLANNING
STUDY REPORT - 1964

Page 1
Date 1-1-65
Author
Title
Subject
Keywords

Background
The National Monument was established in 1908 by the California State Legislature. The monument is situated in the northern part of the state, and its establishment was a result of the discovery of gold in the area. The monument is one of the largest in the state, and it is one of the most important in the history of the state. The monument is a natural monument, and it is one of the most important in the history of the state. The monument is a natural monument, and it is one of the most important in the history of the state. The monument is a natural monument, and it is one of the most important in the history of the state.

Objectives
The objectives of the study are to determine the extent of the monument, to determine the value of the monument, and to determine the need for the monument. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year.

Methodology
The methodology of the study is to be based on the principles of scientific research. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year.

Results and Conclusions
The results of the study are as follows: the extent of the monument is determined to be X acres, the value of the monument is determined to be \$Y, and the need for the monument is determined to be Z. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year.

Recommendations
The recommendations of the study are as follows: the monument should be expanded to include X acres, the monument should be managed in a systematic and scientific manner, and the monument should be protected from all forms of development. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year.

References
The references of the study are as follows: [List of references]. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year.

Appendix
The appendix of the study is as follows: [List of appendix items]. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year.

Summary
The summary of the study is as follows: [Summary text]. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year. The study is to be conducted in a systematic and scientific manner, and it is to be completed by the end of the year.

(Recreation 1.9 continued)

Decision:

Accept the MFP II recommendation as written.

Reasons:

One comment supported the need to study the expansion of the NSA in the CDCA into Nevada.

Recommendation 1.12

Accept the recommendation of the the McCullough Mountains and the Frankman Mountain-Baldwin Gardens area in the National Park Service, (Bureau of Conservation and Recreation Service) as National Natural Landscapes.

Support? Action

Director, Recreation staff and various other divisions.

Remarks:

Although the Clark County Geological Profile identifies the area as having some regional values, they do not possess national significance. The Spring Mountains Range has not usually not been recommended for such a designation. The McCullough Mountains and the Frankman Mountain-Baldwin Gardens area are a relatively less value than the Spring Mountains and as would be less likely to meet National standards.

In addition, an MFP is being recommended for the Frankman-Baldwin Gardens area and the MFP is considering acquisition of it as part of the Las Vegas Wash National Park. Since MFP recommendations recommend protection of sightseeing values in the McCullough Mountains.

Article 14 - Wildlife

The McCullough Mountains and the Frankman-Baldwin Gardens area (Study Area 12A) (Recommendation 7.1 and 7.2). They are also important habitat areas for wildlife, especially bighorn sheep. These mountains are considered prime areas for botanical, ecological, and geological study (7.4).

The Frankman Mountain - Baldwin Gardens area is an important geological study area. Clark County has identified this area for the inclusion in their proposed Las Vegas Wash National Park.

Both areas are important as local wildlife. The various recreation values found, and, although they are considered as some regional values, they do not possess national significance.

Article 15 - Recreation

Accept the recommendation as written.

Reasons:

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	Clark County
Activity	Recreation
Overlay Reference	Step 1 Step 3

Recommendation 1.10

Oppose the designation of the the McCullough Mountains and the Frenchman Mountain-Rainbow Gardens area by the National Park Service, (Heritage Conservation and Recreation Service) as National Natural Landmarks.

Support Needs:

District Recreation staff and management decision.

Rationale:

Although the Clark County Ecological Profile identifies the areas as having some regional values, they do not possess national significance. The Spring Mountain Range does not qualify nor has it received any support for such a designation. The McCullough Mountains and the Frenchman Mountain-Rainbow Gardens areas are of relatively less value than the Spring Mountains and so would be less likely to meet national standards.

In addition, an RAMP is being recommended for the Frenchman-Rainbow Gardens area and Clark County is considering acquisition of it as part of the Las Vegas Wash Wetlands Park. Other MFP recommendations recommend protection of sightseeing values in the McCullough Mountains.

Multiple Use Analysis

The McCullough Mountains encompass two Wilderness Study Areas (WSA) (Recreation 7.1 and 7.2). They are also important habitat areas for wildlife, primarily bighorn sheep. These mountains are considered prime areas for botanical, zoological, and geological sightseeing (PAA).

The Frenchman Mountain - Rainbow Gardens area is an important geological sightseeing area. Clark County has identified this area for inclusion in their proposed Las Vegas Wash Wetlands Park.

Both areas are important to local residents for various resource value reasons and, although they are considered to have regional values, they do not possess national significance.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

See Multiple Use Analysis.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Allow designation to occur unopposed.
2. Oppose only designation of Frenchman-Rainbow Gardens area.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT PROGRAMS
WYOMING-UTAH-ARIZONA

State of Utah
Bureau of Land Management
Salt Lake City
May 1967

Recommendation 1.10

Support the designation of the site
McAllister Mountains and the
McAllister Mountains National Monument
National Park Service, (Bureau)
Conservation and Reclamation Service
as National Natural Landmarks.

Support Goals

Protect historic sites and
historic structures and
management facilities.

Although the Utah County Mountains
are located in the state of Utah
and regional values, they do not
possess national significance. The
Utah County Mountains have not been
noted as a landmark. The Mountains
Mountains and the Fremont
Mountains National Monument areas are of
active interest to the public and
Mountains and so would be less likely
to meet national standards.

In addition, as part of the
recommendation for the Fremont-McAllister
Mountains and Utah County is
considering acquisition of 11,000
acres of the Las Vegas National Park.
Other NHP recommendations recommend
protection of significant values in
the McAllister Mountains.

McAllister Mountains

The McAllister Mountains comprise two mountain peaks (Mts.)
located 7.1 and 7.2 miles apart. They are also located within the
state of Utah. These mountains are considered as a unit for
historical, scientific, and geological significance (BIA).

The McAllister Mountains - McAllister Mountains area is an important geological
site. Utah County has identified this area for inclusion in their
National Park Service National Park.

Both areas are important to local residents for various reasons. Values
and, although they are considered to have regional values, they do not possess
national significance.

McAllister Mountains

Support the recommendation as written.

(Recreation 1.10 continued)

Decision:

Modify the recommendation as follows: When proposed, by the National Park Service, evaluate carefully the designation of the McCullough Mountains and the Frenchman Mountain-Rainbow Gardens area as National Natural Landmarks in light of other actual or potential multiple uses. Gives high priority to maintenance of multiple use status. Should UNLV's R&PP proposal not take place, Recreation 2.3b calls for enhancement of sightseeing activities and is compatible with the Clark County wetlands park proposal. If the McCullough Mountains receive "wilderness" designation, then the area will be preserved. Refer to Recreation 2.5, 2.6, and 2.8 which flag the area as having significant values and define protection measures.

Reasons:

Several comments questioned the reasoning behind Recreation 1.10: One comment stated that the area was determined to have national significance by the Great Basin Review Board (June 1979). Examples of why the area was believed to have national significance were cited. This comment supported the designation by the National Park Service. A second comment questioned why no rationale was given for the Bureau's opposition to designation.

The MFP rationale adequately covers the reasons for critical consideration of the designation. To elaborate on that such designations could place additional, and unnecessary, structures in multiple use management in the area, particularly with regard to utility corridors, minerals exploration, and range/wildlife habitat improvements. Sufficient management tools are currently available to the Bureau to protect values other than these which may be found there.

The final comment suggests that there is an inconsistency between Recreation 1.10 and the Wetland Park Master Plan, stating that the WPMP does not call for the area (Frenchman Mountain - Rainbow Gardens) to be included in the park but rather to manage it outside the park for its "visual resources." The comment stated that the national designation would be necessary to provide for "proper management." The comments in reference to the Wetlands Park are correct in stating that the proposed park does not include this area. The park will, however, directly border this area, and the park plan does discuss the value of its resources.

(Recreation 1.10 continued)

UNLV has an R&PP application pending which encompasses the entire area under discussion. If approval is granted for the R&PP, all management decisions would pass on to the lessee, UNLV. UNLV has indicated that management of the area would be consistent with the environmental values of the area's resources.

Step 1

Step 3

Recommendation 1.11:

Formally close the Red Rock Canyon
Recreation Lands to livestock grazing.

Support Needs:

Range staff, Federal Register Notice.

Rationale:

The vegetation of the RRCRL is an important component of the recreational values which are the prime management objective for the RRCRL. Commercial harvesting of the vegetation by livestock would be incompatible with that objective. Moreover, grazing livestock would become involved in confrontations with recreationists, cause befouling of recreation sites associated with waters, and enhance the dangers of livestock-vehicle confrontations on the Scenic Loop Road and the Blue Diamond Road.

See Range Management 1.2 for multiple use analysis and recommendation.

State	Idaho
County	Blaine
Section	36
Range	10
Tract	10

BLAINE RANGE
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
BLAINE RANGE, IDAHO

The vegetation of the BLAINE is an important component of the natural resources which are the primary management objective for the BLM. Commercial harvesting of the vegetation by livestock would be incompatible with that objective. However, growing livestock would become involved in competition with vegetation, some grazing of vegetation with associated soil erosion, and damage to the range of livestock which is concentrated on the Blaine Loop Road and the Blaine Road.

Recommendation 1.1.1
 Potentially remove the Blaine Canyon
 Restoration lands to livestock grazing.
Supporting Objectives
 Range Health, Federal Registered Interest.

See Range Management Plan for wildlife use analysis and recommendations.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Recreation
Objective Number
R-2

Objective 2.0:

Manage public lands in Clark County to maximize outdoor recreation opportunities. Ensure that management actions are not allowed that degrade, preclude use of, or deny access to principal recreation areas.

Rationale:

BLM lands in Clark County contain only a few developed or intensive recreation areas, although public input to the URA and PAA revealed that recreation use occurs virtually throughout the county. Other resource uses, such as mining and ranching, can cause conflicts with the recreation resource.

The Federal Land Policy and Management Act of 1976 directs BLM to manage recreation resources. BLM Manual 1603.12C2c acknowledges the BLM's role in environmental protection and specifically discusses the preservation and protection of natural values.

Multiple Use Analysis

This objective is consistent with Bureau policy and Federal law (FLPMA, Sec. 102(a)(8)). It is supportive of responding to the great demand for dispersed outdoor recreation from Southern Nevadans.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Recreation

Overlay Reference

Step 1

Step 3

Recommendation 2.1:

Enhance prime horseback riding areas in Clark County through a combination of facility development and reduction of conflicts with other users.

Cooperate with other agencies to maximize available resources.

(a) In Red Rock Canyon, implement the equestrian trail system identified in the master plan. Begin construction of the portion along the base of the escarpment in FY83. Coordinate efforts with the Nevada Division of State Parks.

(b) Cooperate with Clark County in developing a trail system for the Las Vegas Wash/Rainbow Gardens/Sunrise Mountain Area. Eliminate ORV use from designated equestrian trails. Sign and mark hazardous road crossings to protect equestrians. Schedule development according to the county's plan for developing the Las Vegas Wash Wetlands Park.

(c) Limit ORV use in the Spring Mountains to designated roads and trails, to eliminate equestrian-vehicle confrontations.

(d) Develop an equestrian trail plan in the Floyd R. Lamb State Park area with, and at the request of, the Nevada Division of State Parks.

Support Needs:

Division of Operations, facility design, and construction, Clark County Department of Parks and Recreation, Nevada Division of State Parks.

Rationale:

Horseback riding is a popular activity in the county as evidenced in the URA and PAA. Most use occurs in dispersed areas, and requires minimal management. The intensity of use, use conflicts, and demand for developed facilities in the previously mentioned areas, though, necessitates special attention. Clark County is taking an active role in meeting these needs in the Las Vegas Wash Wetlands Park plan. BLM should assist the county in these efforts.

Multiple Use Analysis
(Includes Recreation 2.2)

Horseback riding and hiking are popular with a large portion of the recreating public of Clark County. Hiking on public lands usually occurs in the mountainous areas. Private acreage available for riding or hiking is limited and cannot accommodate the growing demand for more horse or hiking trails. Urban expansion is adding to the recreation population while at the same time it is removing lands upon which these activities could occur unencumbered. Motorized vehicle activity on non-motorized recreational activity trails is unsafe and a nuisance. The extent of popularity of ORV activities in Clark County requires management to provide for areas where non-motorized activity can take place without hindrance from motorized vehicles, yet caution must be exercised in determining the extent of the area being restricted to motorized use.

Multiple Use Recommendation:

Accept the recommendation as written except for Recreation 2.1(c) and Recreation 2.2(c) and (d) which will be analyzed under Recreation 6.4.

Reason:

Current use necessitates that the Bureau provide for enhancement of recreational potential and use in areas where user conflicts are becoming more acute, due to the ever-increasing population growth of a rapidly expanding urban area.

Support Needs:

As stated in MFP 1.

Alternative Considered:

Do not develop an equestrian trail near Floyd Lamb State Park.

Decision:

Accept the MFP II recommendation as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFR)
Clark County

Activity
Recreation

Overlay Reference

Step 1 Step 2

Recommendation 2.2:

Enhance hiking opportunities in prime Clark County areas through a combination of facility development and reduction of conflicts with other users. Cooperate with other agencies to maximize available resources.

(a) In Red Rock Canyon, implement the hiking trail system identified in the master plan. Begin construction of the segments at the base of the escarpment in FY83. Coordinate efforts with the Nevada Division of State Parks.

(b) Cooperate with the U.S. Forest Service in developing trails in the Spring Mountains which tie into Toiyabe National Forest trails. Priority segments are the Red Rock to Charleston Peak trail (which would be designed and implemented as part of the Red Rock trail system) and the Mt. Stirling to Cold Creek/Willow Creek to Camp Bonanza Trail. Design of this portion should be in FY83.

(c) Limit ORV use in Red Rock and the remainder of the Spring Mountains to designated roads and trails to eliminate hiker-vehicle confrontations.

(d) Limit ORV use in the Muddy Mountains and the McCullough Mountains, North and South, to existing roads and vehicular trails to eliminate hiker-vehicle confrontations.

Support Needs:

Division of Operations, facility design and construction, U.S. Forest Service, Nevada Division of State Parks.

Rationale:

The URA and PAA note that hiking is popular in mountainous areas in Clark County. Most use is dispersed and requires minimal management. The intensity of use and demand for developed trails in Red Rock and the Spring Mountains necessitates more intensive management. The Forest Service has an existing trail system on and around Mt. Charleston and has expressed interest in having BLM trails tie into this system.

See Recreation 2.1 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
HATCHER CANYON - SMALL CANYON

Project Name	Hatcher Canyon
Project Number	100-100000
Project Location	Utah
Project Status	Planning

Background:
The BLM and NPS have been working to develop a management plan for the Hatcher and Small Canyons. The plan will address the management of the canyons, including the protection of the canyons' resources, the development of the canyons' infrastructure, and the development of the canyons' recreational facilities. The plan will also address the management of the canyons' cultural resources, including the protection of the canyons' historic sites and the development of the canyons' historic trails.

Recommendation 1.1:
Develop a management plan for the Hatcher and Small Canyons that addresses the protection of the canyons' resources, the development of the canyons' infrastructure, and the development of the canyons' recreational facilities.

(a) In the Hatcher Canyon, implement the following trail system identified in the master plan. The trail system will consist of the Hatcher Canyon Trail, the Small Canyon Trail, and the Hatcher Canyon Loop Trail. The trail system will be developed in the Hatcher Canyon and the Small Canyon, and will provide access to the canyons' resources and recreational facilities.

(b) Develop a trail system in the Hatcher Canyon that provides access to the canyons' resources and recreational facilities. The trail system will consist of the Hatcher Canyon Trail, the Small Canyon Trail, and the Hatcher Canyon Loop Trail. The trail system will be developed in the Hatcher Canyon and the Small Canyon, and will provide access to the canyons' resources and recreational facilities.

(c) Develop a trail system in the Small Canyon that provides access to the canyons' resources and recreational facilities. The trail system will consist of the Small Canyon Trail, the Hatcher Canyon Trail, and the Hatcher Canyon Loop Trail. The trail system will be developed in the Small Canyon and the Hatcher Canyon, and will provide access to the canyons' resources and recreational facilities.

(d) Develop a trail system in the Hatcher Canyon that provides access to the canyons' resources and recreational facilities. The trail system will consist of the Hatcher Canyon Trail, the Small Canyon Trail, and the Hatcher Canyon Loop Trail. The trail system will be developed in the Hatcher Canyon and the Small Canyon, and will provide access to the canyons' resources and recreational facilities.

Recommendation 1.2:
Develop a management plan for the Hatcher and Small Canyons that addresses the protection of the canyons' resources, the development of the canyons' infrastructure, and the development of the canyons' recreational facilities.

See Recommendation 1.1 for multiple use analysis and recommendations.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Recreation

Overlay Reference

Step 1

Step 3

Recommendation 2.3:

Manage the following areas for high value geological sightseeing opportunities. Utilize the expertise at UNLV in interpreting the geological significance of the areas.

(a) Gold Butte - allow individual ORV use throughout in conjunction with sightseeing. Develop interpretive signing by the mid-1980s.

(b) Sunrise and Frenchman Mountains/Rainbow Gardens - enhance sightseeing and related activities through the preparation of an RAMP (see Recreation 1.2).

(c) Gregory's Arch/Keyhole Canyon/Knob Hill - install interpretive signs, access trails, and semi-primitive day-use facilities, and prepare a brochure. Accomplish tasks incrementally through the 1980s.

(d) Muddy Mountains - insure access on the series of unimproved vehicular routes in the area.

Support Needs:

Division of Operations, Kingman Sign Shop, NSO graphics department, UNLV.

Rationale:

All of these areas represent interesting geological features to professionals and amateurs alike. The lack of vegetative cover and the proximity to Las Vegas make sightseeing opportunities readily available. Their visual values are important to the overall visual scope of the county. At the present time, these areas remain in a relatively undisturbed state.

Multiple Use Analysis

(Includes Recreation 2.4, 2.5, and 2.6)

Sightseeing (geological, zoological, and botanical) and mineral and rock collection are popular activities in Clark County. The general lack of vegetation throughout the area makes geological sightseeing opportunities readily available. Much sightseeing occurs in conjunction with other recreation activities, e.g., hiking, camping, ORVing. Mineral and oil and gas leasing entry are increasing in the area. Access to selected sightseeing or collection areas is crucial to the occurrence of these activities. Population growth in the Las Vegas Valley has created an increase in these activities and the use of these areas.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
BIOGEOGRAPHIC ANALYSIS-DESIGN

Project Number	100-100000-100000
Project Name	Elkins Canyon
Project Location	Elkins Canyon
Project Status	Final

Introduction
All of these areas represent
interesting geological features in
protection and preserve alike. The
lack of vegetation cover and the
proximity to Las Vegas area
highly opportunities readily
available. These areas are
important to the overall health and
of the country. At the present time,
these areas remain in a relatively
undisturbed state.

Background
The following areas for high
value geological sites
are identified. Within the existing
at this is interesting the geological
significance of the areas.

(1) Old Mine - Silver industrial and
was throughout the construction with
abandoned. Development
along of the old mine.
(2) Historic and Prehistoric
Monument/Historic Mines - enhance
significance and related activities
through the preservation of an area
(see Section 1.1).

(3) Elkins Canyon - Archaeological
Cultural/Prehistoric - historic
interests along, historic trails, and
well-preserved the old facilities, and
historic - historical, archaeological
interests through the area.

(4) Elkins Canyon - Historic Mines
on the basis of historical value
to the area.

Project Goals
Elkins Canyon, Elkins Canyon
Area, and Elkins Canyon, NV.

Elkins Canyon Area Analysis
(Technical Section 1.1, 1.2, and 1.3)

Elkins Canyon (geological, historical, and cultural) and other
collection are located within the Elkins Canyon. The general lack of
vegetation throughout the area makes geological sites easily
readily available. Such sites are located in conjunction with other
historical features, e.g., historic, mining, and other. These areas are
important to the overall health and of the country. At the present time,
these areas remain in a relatively undisturbed state. The use of these areas

(Recreation 2.3 continued)

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

Current and future use necessitates that the Bureau provide for enhancement and protection of recreational potential and use where identified resource values occur.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

Reasons:

One comment offered assistance in the development of interpretive activities. The form of assistance that UNLV could provide may include preparation of exhibits, giving interpretive talks to the public or to BLM staff and volunteers.

It was suggested in one comment that cultural resources be taken into consideration in ensuring access to rock and mineral collecting areas and that such access will lead to illegal collection of artifacts. Cultural Resources 1.8, providing for patrols into sensitive cultural resource site areas during other field work by BLM staff, can be interpreted to cover this concern by patrolling rock and mineral collecting areas when possible. See CR 1.10.

Step 1	Step 3

Recommendation 2.5:

Manage key areas in Clark County for their botanical sightseeing values. Insure that existing public roads are kept open and that entry to any of these areas is not restricted.

(a) Southern Potosi and Bird Springs Range - Contains very good stands of barrel cactus, prickly pear cactus, century plant, and other species representative of the Mohave Desert.

(b) McCullough Mountains South, including the flanks - contains high botanical values which include virgin stands of Mohave Desert vegetation.

(c) Newberry Mountains - Above the 3,500 foot elevation, manage to preserve botanical values. Coordinate with the National Park Service for visitor services and patrol in this moderately utilized area.

Support Needs:

National Park Service.

Rationale:

The URA notes that botanical values in Clark County are good to excellent. Not only the Mohave Desert, but also the Great Basin and Sonoran Deserts are represented. Botanical sightseeing is often included with picnicking, individual ORV use, hiking, and other activities. Protection of these areas from activities which would adversely impact the botanical resources will assure the continued enjoyment of this resource.

See Recreation 2.3 for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 2.6:

Manage significant rock and mineral collecting areas so as not to exclude access for this purpose. Make sure existing public roads are kept open, and that entry to these areas is not restricted. Areas identified for such collecting are listed in Table R-2.6.

Rationale:

The URA notes that Clark County possesses an impressive variety of valuable rocks and minerals which are relatively easy to extract. According to the PAA, several rare and highly desirable collectibles attract enthusiasts from all over the country. Virtually all Clark County communities contain at least one rock and gem club. The primary management function to support this activity is insuring access to key collecting areas.

Support Needs:

None.

TABLE R-2.6

<u>AREA</u>	<u>COLLECTIBLES</u>	<u>GENERAL DESIRABILITY</u>
Goodsprings	galena, cerrusite, anglesite, fossils, feldspar	excellent
Eldorado Mtns. (Nelson area)	Chalcedony roses, agate, copper minerals	excellent
Searchlight & Newberry Mtns.	agate, lead and silver minerals	excellent
Sunrise Mtn., Rainbow Gardens, Lava Butte	fossils (trilobites), jasper, agate, geodes	good
River Mtns.	amethystine nodules	fair
McCullough Mtns. North	amethystine, quartz, agate, chalcedony roses, jasper	good
Crescent Peak (New York Mtns.)	unakite, epidote, obsidian, geodes, chalcedony, turquoise	very good
Dead Mtns.	quartz, feldspar, garnet	good
Muddy Mtns.	amethystine, jasper, opal, agate	good
Arrow Canyon	fossils, including coral	good
Virgin Mtns. (Key West and Silverleaf Mine Area)	beryl, nickel, schist, hornblendite, quartz lenses, pyrites	good
Gold Butte	petrified wood, mica, selenite roses, corals, brachiopods, bryophytes	very good
North Muddy Mtns. and Overton Ridge	petrified wood, quartz, magnesite	good

Attach additional sheets, if needed

See Recreation 2.3 for multiple use analysis and recommendation.

See Appendix I-2 for details on analysis and recommendations.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Recreation

Overlay Reference

Step 1

Step 3

Recommendation 2.7:

Manage the following five sites for hang gliding. Ensure public access to these is kept open.

- (a) Mt. Potosi
- (b) Little Potosi
- (c) Table Mountain
- (d) Sloan
- (e) Jean - determine the specific facility and development needs of this area as part of the Jean/Roach RAMP. (see Recreation 2.10)

Support Needs:

Division of Operations.

Rationale:

A small local club is the primary user group for this activity in the county.

The primary concern at the five sites identified by them through the URA is retaining access to the take-off and landing areas. Jean, as the prime site in Southern Nevada, warrants a minimum level of improvements to enhance and facilitate use.

Multiple Use Analysis

Hang gliding is a relatively new sport that is enjoyed by a small group of enthusiasts. The nature of the sport requires an area where the hang glider can safely launch and land. Other pursuits occur around these areas, primarily mining and recreation. Some of these areas have communication rights-of-way on them. Access is available for these sites, while other suitable sites do not have access.

Multiple Use Recommendation:

Accept the recommendation.

Reason:

Hang gliding is a recreational activity that has a enthusiastic following and providing for management of areas for this activity to occur will not hinder other resource activities taking place in or near the general vicinity.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Identify additional sites.
2. Limit such use to the Jean area.

Decision:

Accept the recommendation as written.

FOR THE NATIONAL MONUMENTS SYSTEM

Project Name	Clark County
Project Number	1000000000
Project Location	Clark County, Nevada
Project Status	Approved
Project Date	10/1/2000

Recommendation 2.1:

Provide the following five sites for
access to the monument. Access to these sites is
needed for the monument to be managed as a
single unit.

- (1) Mt. Wheeler
- (2) Snake River
- (3) Snake River
- (4) Snake River
- (5) Snake River

(6) Snake River - Access to the specific
facilities and development needs of this
area as part of the Snake River Basin
(See Recommendation 2.10)

Snake River
Bureau of Land Management

Snake River Basin

Snake River is a relatively new sport that is enjoyed by a small group of
enthusiasts. The nature of the sport requires an area where the river is
relatively narrow and deep. Other requirements are that the area be
relatively quiet and unpopulated. There are a number of areas that have been
identified as potential sites for this sport. Access to these areas will allow
enthusiasts to enjoy the sport.

Snake River Basin
Bureau of Land Management

Snake River is a recreational
activity that has a long history
of use for this activity. Access
to these areas will allow
enthusiasts to enjoy the sport.
Access to these areas will allow
enthusiasts to enjoy the sport.

Snake River Basin

- 1. Identify additional sites.
- 2. Identify access to the sites.

Access to the monument as a whole.

Step 1

Step 3

Recommendation 2.8:

Support the Nevada Department of Wildlife in their management and upgrading of hunting opportunities on a county-wide basis. Insure public access is maintained to the hunting areas identified below and any new areas developed for hunting. Deny competitive ORV permits in the following areas that rate good or excellent during the specific hunting season.

Support Needs:

Nevada Department of Wildlife.

Rationale:

The Nevada Department of Wildlife has the responsibility to manage wildlife. BLM's role is one of minimizing impact to wildlife and habitat, improving habitat, and maintaining access to hunting areas. Potential conflicts exist between hunters and ORV races.

TABLE R-2.8
HUNTING POTENTIAL

<u>Area</u>	<u>Excellent</u>	<u>Good</u>	<u>Fair</u>	<u>Poor</u>
Highland Range	Bighorn Quail			
Spring Mountains		Bighorn Quail		Chukar Mule Deer
Eldorado Mountains		Bighorn Quail		
Bird Spring Range			Bighorn	
Searchlight Area		Quail		
Las Vegas Wash		Quail		Waterfowl
Newberry Mountains		Bighorn Quail		Mule deer
McCullough Range		Bighorn		
Castle Mountains			Bighorn Quail	
Moapa Valley	Quail	Waterfowl (private lands)		
Arrow Canyon Range		Bighorn		
Gold Butte		Quail		
Muddy Mountains		Bighorn		
Virgin River			Quail	
Virgin Mountains			Waterfowl Quail	

Attach additional sheets, if needed

(Instructions on reverse)

Multiple Use Analysis

Hunting is an important recreational activity enjoyed by a relatively small, but enthusiastic, portion of the recreating public. Access to most of the areas identified is good to excellent. Mineral and oil and gas leasing activity is occurring in the majority of these areas. In several of the areas, trailbike riding is a popular activity. Competitive ORV events currently occur in the Eldorado Mountains, Bird Spring Range, Searchlight area, Castle Mountains, and Moapa Valley.

Multiple Use Recommendation:

Modify recommendation to read as follows: Manage the public lands and support the Nevada Department of Wildlife in an effort to upgrade hunting opportunities in Clark County. Ensure public access is maintained to the hunting areas identified in Table R-2.8 and to any new areas developed for hunting. Competitive ORV events will be managed on a case-by-case basis taking into account the hunting opportunity available in the area during the specific hunting season.

Reason:

Maintaining access to valued hunting areas is important. Competitive ORV events vary in nature and scope and denial of an event is best decided on a case-by-case basis until the Clark County ORV designation decisions are made.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the MFP II recommendation as written.

Public Law 86-360

Hunting is an important recreational activity enjoyed by a relatively small but increasing portion of the American public. Access to areas of the State is essential to the enjoyment of these areas. In several of the areas, hunting is a popular activity. Competitive hunting events are popular in the State, particularly in the areas of hunting, fishing, and trapping.

Recommendations

Continuing access to public hunting areas is important. Competitive hunting events are popular in the State, particularly in the areas of hunting, fishing, and trapping.

Public Law 86-360

Step 1

Step 3

Recommendation 2.9:

Manage the Eldorado Valley for multiple recreation values. Re-evaluate in FY86 to determine if increased usage warrants development of an RAMP.

Support Needs:

Lands and Minerals.

Rationale:

This area, particularly the dry lake, is one of the most intensive recreation use areas in Southern Nevada. A multitude of recreation activities occur here. In 1979, eight ORV races attracted 2,000 participants and spectators. Individual ORV use is heavy. Several national model airplane events are held on the dry lake and two commercial aircraft companies offer rides. The dry lake has become a filming center for major motion pictures. Other uses include landsailing and powered hang gliders.

Transmission lines and surface disturbing actions such as seismic lines hamper recreation activities on and around Eldorado Dry Lake. If the State of Nevada does not exercise its option to purchase the Eldorado Valley by FY84, an RAMP should be strongly considered for this area at that time. In the interim, transmission line rights-of-way should not be approved any closer to the dry lake than the existing lines, and surface disturbing actions should not be authorized on the lake surface.

Multiple Use Analysis
(Includes Recreation 2.10)

These valleys support a variety of recreational activities. Organized ORV competitive events occur regularly (eight in Eldorado Valley in 1979 and seven in Jean/Ivanpah Valley in 1979, involving a total of some 7,000 participants and spectators). Landsailing, powered hang-gliders, model airplaning, ORVing, commercial filming, commercial and individual still photography, camping, and commercial aircraft and glider rides are examples of the numerous and varied recreation activities that occur on the dry lake beds located in the valleys. Utility powerline rights-of-way traverse the valleys. Mineral entry, primarily in the form of sand and gravel pits, occur at various points throughout the valleys. The State of Nevada has an option to purchase about 105,000 acres in Eldorado Valley which they have not exercised to date. Boulder City and Clark County are considering locating a new airport in Eldorado Valley.

RECOMMENDATION - ANALYSIS - SUMMARY
 MANAGEMENT FRAMEWORK PLAN
 BUREAU OF LAND MANAGEMENT
 DEPARTMENT OF THE INTERIOR
 UNITED STATES

Project Number: 100-100000-1000
 Project Name: 100-100000-1000
 Project Location: 100-100000-1000
 Project Date: 100-100000-1000

Recommendation 1.1
 The BLM should develop a management framework plan for the 100-100000-1000 area. This plan should include a description of the area, a list of resources, a list of threats, and a list of management actions. The plan should also include a budget and a timeline for implementation.

Recommendation 1.2
 The BLM should develop a management framework plan for the 100-100000-1000 area. This plan should include a description of the area, a list of resources, a list of threats, and a list of management actions. The plan should also include a budget and a timeline for implementation.

Recommendation 1.3
 The BLM should develop a management framework plan for the 100-100000-1000 area. This plan should include a description of the area, a list of resources, a list of threats, and a list of management actions. The plan should also include a budget and a timeline for implementation.

Recommendation 1.4
 The BLM should develop a management framework plan for the 100-100000-1000 area. This plan should include a description of the area, a list of resources, a list of threats, and a list of management actions. The plan should also include a budget and a timeline for implementation.

Recommendation 1.5
 The BLM should develop a management framework plan for the 100-100000-1000 area. This plan should include a description of the area, a list of resources, a list of threats, and a list of management actions. The plan should also include a budget and a timeline for implementation.

Recommendation 1.6
 The BLM should develop a management framework plan for the 100-100000-1000 area. This plan should include a description of the area, a list of resources, a list of threats, and a list of management actions. The plan should also include a budget and a timeline for implementation.

(Recreation 2.9 continued)

Multiple Use Recommendation:

Accept the recommendation as written.

Support Needs:

As stated in MFP 1.

Reason:

These valleys, and especially the dry lake beds (playas), are immensely popular recreational areas. Special management consideration is required to ensure that user conflicts are minimized or alleviated.

Alternatives Considered:

1. Manage recreation in these areas on a par with other resource uses.
2. Give priority to utility lines.

Decision:

Modify the recommendation as follows:
Manage the Eldorado Valley for multiple recreation values.

Re-evaluate in FY86 to determine if increased usage warrants development of a RAMP. Prepare the RAMP with the potential effect of the Eldorado Valley Land Transfer Act taken into consideration.

Reasons:

One comment alluded to the Eldorado Valley Land Transfer Act and the potential effect the acquisition of the lands within Eldorado Valley would have on the "future recreation use" of the area. The additional wording has been added to the decision delineating the need to study this potentiality in any RAMP that may be prepared.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)	
Clark County	
Activity	
Recreation	
Overlay Reference	
Step 1	Step 3

Recommendation 2.10:

Manage the Jean Valley/Ivanpah Valley area for multiple recreation values. Re-evaluate in FY86 to determine if increased usage warrants development of an RAMP.

Support Needs:

Lands and Minerals.

Rationale:

These valleys, which include two dry lakes, support a variety of recreation activities. In 1979, seven ORV races attracted some 5,000 participants and spectators. Such prominent races as the Las Vegas 400 and SNORE 250 are held here. An international land-sailing regatta, powered hang gliders, and a company that offers commercial aircraft rides use the dry lakes. The PAA identifies a hill near Jean Dry Lake as the premier hang gliding site in Southern Nevada.

In 1980, a local recreation group made a proposal to the Nevada Division of State Parks to manage parts of this area as a regional recreation park to manage the above-mentioned activities as well as camping, hunting, and sightseeing. Though this proposal was thought to be premature by some at the time, it may warrant strong consideration in the late 1980s as the Clark County population continues its rapid growth and rising energy costs keep recreationists closer to home.

Use conflicts exist in the form of utility line corridors encroaching on the dry lakes and seismic line and other surface-disturbing activities marring the lake surfaces.

See Recreation 2.9 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Recreation

Objective Number

R-3

Objective 3.0:

Cooperate with and support other agencies' efforts to provide increased outdoor recreation opportunities, and/or access to existing recreation areas, on their lands and on adjacent public lands, for urban residents and visitors alike.

Rationale:

Other agencies can provide recreation opportunities to complement and enhance those provided by BLM. Different agencies have different skills and management level capabilities which, when combined with BLM's, produce better opportunities for the public. In the past, cooperative efforts have enhanced management of the Red Rock Canyon Recreation Lands.

Data cited in the PAA on recreation needs and the county's growth, the energy crisis and the financial woes of most public agencies, strongly indicate the need for pooling resources and concentrating on opportunities close to metropolitan areas.

FLPMA and recent BLM policy statements encourage this kind of cooperation. In addition to increasing the supply and quality of opportunities, coordination can channel use to areas where it is desirable, and away from environmentally sensitive, hazardous, or otherwise inappropriate areas.

Multiple Use Analysis

This objective supports the concept of interagency cooperation and providing service to the public by combining the strong points of the different agencies. It supports the "good neighbor" policy and would receive wide public support.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Project Number
Activity
Priority
Status
Date

Objective 1.0:

Coordinate with and support other agencies' efforts to provide information, technical assistance, and/or access to existing information systems to their lands and on adjacent public lands for their residents and visitors alike.

Activities:

Identify and provide technical assistance to appropriate and enhance those provided by BLM. Identify agencies that possess skills and management level capabilities which, when combined with BLM's, produce better opportunities for the public. In the past, cooperative efforts have occurred management of the Red Rock Canyon Recreation Area.

Data cited in the BLM on recreation needs and the country's growth, the strategy and the financial needs of most public agencies, strongly indicate the need for providing resources and coordinating an organization closer to metropolitan areas.

With and through the policy statements encourage this kind of cooperation. In addition to increasing the supply and quality of opportunities, coordination can channel use to areas where it is desirable, and away from environmentally sensitive, hazardous, or otherwise inappropriate areas.

Multiple Use Analysis

This objective summarizes the management of interagency cooperation and providing services to the public by coordinating the efforts of the different agencies. It involves the "good relations" policy and would involve with public support.

What is the action plan?

Assign the objective as written.

Results:

Meet the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Recreation

Overlay Reference

Step 1

Step 3

Recommendation 3.1:

Develop by FY84 a cooperative agreement with the Nevada Division of State Parks (NDSP) which would identify:

- 1.) Long range cooperation
- 2.) Recreation goals and objectives between the two agencies.

Provide buffer zones of open space around existing State Parks: Valley of Fire and Floyd Lamb. Maintain space for eventual equestrian trail corridors from Floyd Lamb State Park to the Desert National Wildlife Range, and from Valley of Fire State Park to the Buffington Pockets area of the Muddy Mountains.

Maintain open space corridors along the routes identified in the Nevada Statewide Trails Inventory for the Basin and Range Cross-State Off-Highway Vehicle Trail, the Las Vegas Wash Trail, the Las Vegas Valley Recreation Trail, and the Red Rock Canyon Excursion Trails and Staging Points. Work with NDSP to define and refine these corridors, and to discuss mutual goals, problems, etc.

Support Needs:

District Recreation Staff, Management, NDSP.

Rationale:

The Division of State Parks has requested that BLM consider their desires for buffer zones and trail corridors leading onto public lands; recreational values do not cease at political boundaries. Development of trail systems between points of interest will increase recreation opportunities and help satisfy demands identified in the SCORP and URA.

Multiple Use Analysis
(Includes Recreation 3.2)

Cooperation is generally excellent with neighboring government agencies with recreational responsibilities. Formalization of this spirit in a cooperative agreement would be helpful. A more positive long-range effort to be explored would be cooperation on specific recreational projects which would allow expertise and land/recreation managing abilities to come together and focus on a specific area.

(Recreation 3.1 continued)

Corridors and buffer zones create immediate and difficult-to-resolve conflicts with other uses, i.e., mineral exploration (Minerals 1.1) and livestock grazing (Range Management 1.2).

Multiple Use Recommendation:

Accept the recommendations as written except do not provide buffer zones or maintain corridors free of other uses unless the managing recreation agency requests a Recreation and Public Purposes Act disposal of the land.

Reason:

Cooperation on specific projects among agencies is excellent and in the public interest. Buffer zones and holding of corridors open amount to de facto segregation of public lands, which is contrary to Federal regulations.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the MFP II recommendation as written.

Reason:

One comment strongly endorsed Recreation 3.1, stating that it could alleviate potential problems with the State of Nevada.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

Step 1

Step 3

Recommendation 3.2:

Develop a cooperative agreement with the U.S. Forest Service, the National Park Service, the U.S. Fish and Wildlife Service, and Clark County, to develop projects such as the bicycle trail through RRCRL along county and BLM rights-of-way by 1986. Other potential areas for cooperation include equestrian trail corridors or day-use facilities around outlying towns.

Support Needs:

All agencies included above. Nevada State Office Recreation staff.

Rationale:

Cooperation between agencies will provide better recreation opportunities for the public and allow BLM to support local governmental agencies who can provide opportunities complementary to BLM's.

See Recreation 3.1 for multiple use analysis and recommendation.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Recreation

Objective Number

R-4

Objective 4.0:

Provide visitor safety and resource protection on all public lands in the county. Cooperate with local agencies for those services which BLM is not able to provide.

Rationale:

Potentially hazardous conditions exist in the form of unmarked mineshafts, flash flood areas, and wildfire hazards, to name a few. Needless tragedies occur because of public unfamiliarity with potential hazards. Tort claims have been filed against BLM in the past as a result of accidents to recreationists on public lands. Bureau policy and regulations require authorized officers to provide for safety of visitors. Protection of recreation resources from wildfire and other kinds of misuse are required if opportunities are not to be lost.

BLM does not have the means to provide all the services needed to protect visitors and the resources; therefore agreements with other agencies must be established, along with communications networks for the rapid transfer of information.

Multiple Use Analysis

This objective is consistent with Bureau responsibilities to the visiting public with respect to safety. It is consistent with FLMA (Sec. 303).

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

Clark County
Activity
Recreation
Overlay Reference
Step 1
Step 3

Recommendation 4.1:

Educate the public to hazards such as flash floods, wildfire, desert survival, and open mineshafts, which are associated with the county's public lands. Brochures, safety messages in interpretive programs, TV spots, public service announcements, and news releases should be utilized. In some cases physical barriers should be provided.

Rationale:

Although most hazards are part of the natural and man-made environment, many people are simply not aware of them, and don't know how to avoid them. Children can be particularly susceptible to them. BLM must be concerned about threats to the well-being of visitors to public lands and facilities.

Support Needs:

State, County, and City agencies, District Recreation and Operations staffs, Public Affairs Officer.

Multiple Use Analysis
(Includes Recreation 4.2)

The identification and mitigation of hazards which affect public safety are standard procedures provided for through current regulations. Education of the public in regards to hazards is important and information concerning these hazards should be made readily available for the prudent individual and concerned public.

Multiple Use Recommendation:

Accept the recommendation as written, except eliminate the five-year completion target in Recreation 4.2 and complete the task as funds and personnel are available.

Reason:

Multiple use resource management guidelines as outlined in the regulations provide for public safety consideration.

Support Needs:

As stated in MFP 1.

Alternatives Considered:

1. Map, but do not mitigate ORV hazards.
2. Mitigate hazards only in high use areas.

Decision:

Accept the MFP II recommendation as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT FRAMEWORK PLAN
WYOMING-UTAH-ARIZONA

Page 1
Date: 10/1/88
Author: [illegible]
Title: [illegible]

Although most hazards are part of the natural and man-made environment, they are not always easily avoided. Some hazards can be avoided by the public, but not all. It is the responsibility of the BLM to provide information about hazards to the public and to develop and maintain a system of public lands and facilities.

Recommendation 1.1:
Develop a system of public lands and facilities that is safe, secure, and accessible to the public. This system should include a system of public lands and facilities that is safe, secure, and accessible to the public. This system should include a system of public lands and facilities that is safe, secure, and accessible to the public.

Support needed:
Bureau, District, and Field offices.
Staff, equipment, and facilities.
Public information.

WYOMING-UTAH-ARIZONA
(See also Recommendation 1.2)

The identification and mitigation of hazards which affect public safety are essential to the management of public lands. The BLM is responsible for the identification and mitigation of hazards which affect public safety. The BLM is responsible for the identification and mitigation of hazards which affect public safety.

Recommendation 1.2:
Develop a system of public lands and facilities that is safe, secure, and accessible to the public. This system should include a system of public lands and facilities that is safe, secure, and accessible to the public.

WYOMING-UTAH-ARIZONA
Recommendation 1.2:
Develop a system of public lands and facilities that is safe, secure, and accessible to the public. This system should include a system of public lands and facilities that is safe, secure, and accessible to the public.

Recommendation 1.3:
Develop a system of public lands and facilities that is safe, secure, and accessible to the public. This system should include a system of public lands and facilities that is safe, secure, and accessible to the public.

Support needed:
Bureau, District, and Field offices.
Staff, equipment, and facilities.
Public information.

Recommendation 1.4:
Develop a system of public lands and facilities that is safe, secure, and accessible to the public. This system should include a system of public lands and facilities that is safe, secure, and accessible to the public.

Step 1

Step 3

Recommendation 4.3:

Provide law enforcement in high use recreation areas, particularly the RRCRL, through whatever means are available to the BLM. Consider cooperative agreements with qualified agencies, such as Las Vegas Metropolitan Police Department or Nevada Division of State Parks. If law enforcement authority is given to BLM, agency personnel should immediately be trained.

Priority areas for law enforcement needs are:

- 1.) RRCRL
- 2.) Red Springs
- 3.) Cold Creek/Willow Creek
- 4.) All other areas

Develop and pursue a contract and/or cooperative agreement with the following agencies to enforce State and local laws:

- 1.) Metropolitan Police (Sheriff)
- 2.) Nevada Division of State Parks
- 3.) Nevada Division of Forestry
- 4.) Nevada Division of Wildlife

Support Needs:

State and county law enforcement personnel. Cooperative agreements, BLM criminal investigator, Recreation staff.

Rationale:

Some of the problems, violations, and other situations occurring on BLM lands in the county are severe enough to require the presence of personnel with full law enforcement authority. This is particularly true in the RRCRL. BLM personnel are not trained, do not have authority to act, and risk great personal danger in attempting to deal with these situations. Therefore, situations are ignored which should receive law enforcement attention. Examination of case-incident files will reveal the types of situations. The most cost-effective method for solving these problems would be BLM law enforcement officers. Barring that, reliance will have to be placed on other agencies.

Multiple Use Analysis

RRCRL, Red Springs, and the Cold Creek/Willow Creek areas are high use recreation areas. Incidents of criminal and other acts occur relatively frequently, especially in RRCRL. Federal regulations prohibit dangerous and disruptive acts but do not provide for enforcement of these same regulations. Current use in these areas requires trained personnel to enforce pertinent laws.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
MANAGEMENT RESEARCH PLAN
RECOMMENDATION-ANALYSIS-DECISION

Page 1
Date 1/1/71
Project
Location
Author
Title

Background
One of the most serious violations and other activities occurring on BLM lands in the country are those which involve the presence of personnel with full law enforcement authority. This is particularly true in the WEST. BLM personnel are not trained, do not have authority to act, and are in great personal danger in attempting to deal with these criminal situations. Situations are ignored which should receive law enforcement attention. Extension of law enforcement title will reveal the types of situations. The most cost-effective method for solving these problems would be BLM law enforcement officers. Having that, reliance will now be placed on other agencies.

Recommendation 1.1
Provide law enforcement in high use recreation areas, particularly the WEST, through either means are available to the BLM. Consider cooperative agreements with qualified agencies, such as law enforcement personnel, for law enforcement of these areas. If law enforcement authority is given to BLM, agency personnel should immediately be trained.

Priority areas for law enforcement
include:

- 1.) BLM
- 2.) Bad Spring
- 3.) Cold Creek/Wild Creek
- 4.) Other areas

Develop and provide a contract and/or cooperative agreement with the following agencies to enforce BLM and local laws:

- 1.) BLM
- 2.) Nevada Division of State Parks
- 3.) Nevada Division of Forestry
- 4.) Nevada Division of Wildlife

Support needed
State and county law enforcement personnel. Cooperative agreements. BLM criminal investigation, detection staff.

Implementation Analysis

Both the BLM and the Cold Creek/Wild Creek areas are high use recreation areas. Presence of criminal and other law enforcement personnel, especially in the WEST. Federal regulations prohibit dangerous and disruptive acts but do not provide for enforcement of these laws. Criminal law in these areas requires trained personnel to enforce personnel laws.

(Recreation 4.3 continued)

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

Incidents requiring law enforcement occur all too frequently in high use recreation areas. Until such time as law enforcement authority is given to BLM personnel, it is necessary to have cooperative agreements with qualified agencies to enforce Federal, State, and local laws.

Support Needs:

State and county law enforcement agencies. Cooperative agreements, BLM criminal investigator, and Recreation staff.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

Reason:

One comment expressed support for the need to provide for enforcement in RRCRL for such things as "litter and vandalism" violations.

(Reference 4.3.2.1.1)

Reference 4.3.2.1.1

Step 1

Step 3

Recommendation 4.4:

Coordinate with the Sheriff's Jeep Posse and Metro Special Operations Unit to provide search and rescue operations for climbers, hikers, and other recreationists on public lands. BLM personnel should also receive training and be able to handle many situations.

Rationale:

This group of people is fully trained in search and rescue operations, and should be called for all situations which BLM personnel are unable to handle.

Support Needs:

RRCRL staff, District Recreation staff.

Multiple Use Analysis

The intensity of use on public lands in Clark County is high and incidents requiring trained search and rescue personnel have occurred in the past and will most likely continue to occur. BLM personnel trained in search and rescue techniques are few. Time is of the essence when attempting search and rescue of individuals.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

Current use on the public lands demands that needed search and rescue operations be timely, efficient, and effective. The Sheriff's Jeep Posse and Metro Special Operations Unit are organizations of which one of their primary functions is search and rescue.

Support Needs:

RRCRL staff, District Recreation staff, and the District Safety Officer. All activities.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

RECOMMENDATION FOR LAND USE

Recommendation 4.1
This group of people is to be trained in search and rescue operations and should be called for all situations which BLM personnel are unable to handle.

Recommendation 4.2
Cooperation with the Sheriff's Office, Forest and Range Special Operations Unit to provide search and rescue operations for hikers, hunters, and other recreationalists on public lands. BLM personnel should also receive training and be able to handle many situations.

Support needed:
BCEI staff, District Recreation staff.

Wildlife Use Analysis

The intensity of use on public lands in their vicinity is high and recreational activities are increasing. Search and rescue personnel have been called in the past and will most likely continue to do so. BLM personnel trained in search and rescue techniques are few. This is of concern when attempting search and rescue of individuals.

Reason:
Current use on the public lands demands that search and rescue operations be timely, efficient, and effective. The Sheriff's Office, Forest and Range Special Operations Unit are organizations of which one of their primary functions is search and rescue.

Wildlife Use Recommendation:
Accept the recommendation as written.

Management Considerations:
None.

Support needed:
BCEI staff, District Recreation staff, and the District Safety Officer. All activities.

Comments:
Accept the recommendation as written.

Step 3

Recommendation 4.5:

Prepare, or bring up to date immediately, fire suppression plans for recreation areas, taking into account where the greatest threats to human life and property are, where recreation values would be destroyed through loss of native or special vegetation, and where direct or indirect hand suppression techniques should be applied.

The following is a list by priority of the recreation areas currently needing protection:

- 1.) RRCRL
- 2.) Cold Creek/Willow Creek - Wheeler Wash/Mt. Stirling
- 3.) Lovell Canyon
- 4.) Remaining Spring Mountains
- 5.) Virgin Mountains/Mormon Mountains
- 6.) South McCulloughs

Support Needs:

District Recreation staff, Fire Management Officer.

Rationale:

BLM policy currently is to suppress all fires. Priority should be given to areas where human lives or property are at stake. The Spring Mountain Range, including Red Rock Canyon, is identified in the URA and PAA as a critical recreation area requiring special management. High visitor use, expensive improvements, and unique recreational values make effective fire suppression there imperative.

See Fire 1.4 for multiple use analysis and recommendation.

MANAGEMENT FRAMEWORK PLAN

1. PURPOSE AND SCOPE
 2. OBJECTIVES
 3. SCOPE
 4. REFERENCES

1. PURPOSE AND SCOPE

The purpose of this plan is to provide a framework for the management of the National Forest System lands. The plan is intended to guide the management of these lands in a way that is consistent with the National Forest Management Act (NFMA) and the National Forest Management Plan (NFMP). The plan is intended to provide a framework for the management of these lands in a way that is consistent with the NFMA and the NFMP.

The following is a list of the major components of the management framework:

1. Land Use Planning
2. Resource Management
3. Recreation Management
4. Research and Monitoring
5. Education and Outreach
6. Administration and Finance

The plan is intended to provide a framework for the management of these lands in a way that is consistent with the NFMA and the NFMP.

See also the National Forest Management Act (NFMA) and the National Forest Management Plan (NFMP).

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Recreation

Objective Number

R-5

Objective 5.0:

Manage the public lands in the Spring Mountains as a primary recreation area for residents of Southern Nevada. Cooperate with private landholders and other agencies as needed.

Rationale:

Over one-half of the State's population resides within a one-hour drive of the Spring Mountains. Numerous studies cited in the URA and PAA indicate a great need for more campgrounds, picnic areas, and places to "get away from it all," particularly around Las Vegas where crowding and summer heat cause great numbers of residents to travel to the mountains for recreation. The sharply rising cost of energy may cause Clark County residents to look more often to local areas to satisfy their recreational needs.

The BLM is capable of meeting many of these recreation needs through existing programs and within current policy constraints. Recent surveys by District personnel indicate that use is becoming too heavy to proceed under the concept of dispersed recreation in this mountain range.

Improving facilities and management will accomplish two things: the need for recreation will be better met, and the resource can be better protected from misuse and degradation. The Spring Mountains are being impacted by overuse, wildfire, and development of private land. The PAA states that all or most of the range may be a Critical Environmental Area.

Multiple Use Analysis

The Ecological Profile for Clark County identified the Spring Mountain Range as "substandard" because of its great susceptibility to environmental degradation through the many human uses found there. With its nearness to Las Vegas, it is apparent the demand for recreational use will continue to grow. It is not a demand that can be put off. If it is not directed and controlled, the resources will certainly suffer, to the detriment of all, including the recreationist.

Establishing recreation as the primary resource use on the Spring Mountain Range would certainly curtail other resource uses. Mineral exploitation and its inherent surface disturbance would be hampered by this objective. Vegetation manipulation programs for other resource purposes would be subordinated to a degree. Wildlife and its habitat would certainly be impacted by the increased human use encouraged by implementing this objective. The list goes on into virtually every other resource program.

The undisputed fact remains, however, that the impacts will occur. Las Vegas cannot be kept from the mountain. BLM, if it attempts to react negatively to the recreational use impacts with restrictions and use denials, has neither

BUREAU OF LAND MANAGEMENT**

**MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OUTLINE**

Executive Summary

The public lands in the San Diego Mountains are a primary resource area for residents of Southern California. Cooperation with private landowners and other agencies is needed.

Introduction

Over the past few years, the State's population has grown rapidly. This has led to increased demand for public lands. The State's public lands are a primary resource area for residents of Southern California. Cooperation with private landowners and other agencies is needed.

The State is capable of meeting many of these resource needs through existing programs and efforts. However, further action is needed to protect the State's public lands. The State's public lands are a primary resource area for residents of Southern California. Cooperation with private landowners and other agencies is needed.

Improving land use and management will accomplish the State's goals. The State's public lands are a primary resource area for residents of Southern California. Cooperation with private landowners and other agencies is needed.

Public Land Analysis

The Public Land Analysis for the San Diego Mountains is a study of the State's public lands. It identifies the State's public lands and their uses. The State's public lands are a primary resource area for residents of Southern California. Cooperation with private landowners and other agencies is needed.

Establishing a management plan for the State's public lands is a primary resource area for residents of Southern California. Cooperation with private landowners and other agencies is needed.

The management plan for the State's public lands is a primary resource area for residents of Southern California. Cooperation with private landowners and other agencies is needed.

(Recreation 5.0 continued)

the personnel nor the enforcement clout to make negative management actions stick. On the other hand, positive recreational management that accommodates and channels the recreational use demands will both meet the challenge and minimize the impacts on the other resource uses present.

Multiple Use Recommendation:

Modify the objective as follows:
Manage the public lands in the Spring Mountain Range primarily for the recreational values there. All other resource plans and programs will be coordinated with and subordinated to the recreation program. Cooperate with private landholders and other agencies as needed.

Decision:

Accept the objective as modified in MFP II.

Step 1	Step 3

Recommendation 5.1:

Prepare a series of RAMPs on critical use areas for gradual development of the Spring Mountains to serve as a major recreation area for Southern Nevada. (See Tables RM 5.1-1 RM 5.1-2, RM 5.1-3). Within 10 years develop an overall master plan for recreational uses on the mountain range. The goal should be to maximize the recreation experience for the number of visitors the resource can tolerate. Type of use would vary from location to location but should include the following: overnight camping, picnicking, day-use activities such as historical sightseeing, certain kinds of ORV use, hiking, and other compatible activities as deemed appropriate. Current uses, such as mining, grazing, and forest products harvesting would not be restricted, but recreation would become the major use in these mountains. Overall, developments would be at a relatively low level. Since trailers and RVs are extremely popular, some provisions for them should be made. For the most part, roads should remain unpaved, campgrounds small, and facilities simple. Users should be expected to carry out their own trash, especially from remote areas.

Coordination with the Toiyabe National Forest, Mt. Charleston District, and public participation should be included in this planning project.

Support Needs:

Planning requirements can be met by existing District staff. Implementation will probably require increased staffing, which may be accomplished through eight or nine-month temporary appointments.

Rationale:

The URA, PAA, SCORP, and numerous other sources address the shortage of recreation resources in Southern Nevada. The PAA further identifies the Spring Mountains as a critical environmental area because heavy use, man-caused fires, and private developments are causing severe resource impacts. The Ecological Profile describes the Spring Mountains as moderately susceptible to change agents. Managing the area for recreation and directing use to desirable locations are the best methods to counteract these problems.

Multiple Use Analysis

The Spring Mountains lie close to a major metropolitan area that is rapidly

(Recreation 5.1 continued)

expanding. These mountains have been identified as an extremely important recreation area, especially to local residents. The Spring Mountain Range provides a mountain retreat for escape from the populated valley. During the summer, they are the closest place available to get away from the valley's oppressing heat. Some of the current uses in the mountains include camping, picnicking, sightseeing, trail-bike riding, hiking, hunting, ORVing, and horseback riding. The Forest Service has facilities available, but these are proving to be limited and overcrowded. This overcrowding has generated an increase in recreational use of BLM administered lands in the Spring Mountains (PAA).

In addition to the PAA identification of the range as a major recreation destination for Las Vegas, the Ecological Profile identified the range as "substandard" because of the great actual and potential impact on its ecological systems through uncontrolled human use. It is clear that the use pressures for recreation will continue. Equally clear is that without control and direction of that use, the natural resources of the mountain range will be severely degraded. The Mack Canyon Fire (June 24 - July 2, 1981) was caused by an escaped campfire. It cost the Bureau and the Forest Service some 6,400 acres in excellent forested recreation lands. In addition to that catastrophic type of degradation, the ordinary pressures of multiple use, as described below, also have the real potential of overloading the natural system's capabilities to handle use impacts.

Firewood gathering (dead and down) is allowed to occur here, and current use areas are not actively defined. The demand for firewood/greenwood cutting is growing and, considering the resources available for this activity, it is necessary to identify cutting areas and monitor cutting (Forestry 1.1, Wildlife 1.30). Unsupervised cutting and gathering could have strong impacts on watershed and vegetation values. Losses in these areas could severely impact recreational uses by degrading the environment in which recreation takes place. In the extreme, uncoordinated woodcutting could actually destroy the value of a facility such as a campsite or picnic area.

The Spring Mountain Range currently has active grazing on four of its seven allotments: Kyle Canyon, Lucky Strike, Younts Springs and Wheeler Wash. The unallotted-ungrazed allotments are Spring Mountain, Wheeler Slope, and Roses Springs (Range Management 1.2, Livestock Grazing 1.4). Continued grazing would provide some conflict with recreational uses in terms of confrontations between recreationists and livestock. From a sightseeing point of view, grazing livestock could add to the recreational experience. More direct impacts could arise from uncoordinated fencing that blocks off recreational areas, water developments that conflict with campgrounds, and the like.

Leaving the ungrazed allotments ungrazed (Wildlife 1.7, Recreation 1.11) would eliminate the confrontation possibilities (and the pastoral/western scenes) as well as enhance wildlife values which would improve recreation from the hunting and animal photography perspectives. It would also encourage the development of the forest-brush type of plant communities as opposed to the grass-brush communities desirable for livestock grazing.

These mountains support, in varying density populations, numerous wildlife and raptor species. Hunting occurs in the mountains, but other recreational use, intense and extensive throughout most of the range, has created a situation where public safety and user conflicts are becoming an important issue (Recreation 2.8, Wildlife 1.11, Wildlife 1.13).

(Recreation 5.1 continued)

In addition, the increased human use of the mountains for recreation could cause increased displacement of wildlife species intolerant of human activity (Wildlife 1.1, 1.4, 1.5, 1.6).

Private/patented land is scattered in plots throughout the area and unintentional trespass, user conflicts, and fire threat exists (Fire 1.4).

Development of recreational facilities on public land near private land might be opposed by landowners who perceive public use as impinging on the privacy and naturalness required for enjoyment of their mountain retreats. A very real possibility of such conflicts exists in the Cold Creek area, albeit warnings were given about the potential conflicts at the time private development plans were approved.

Off-road vehicle use occurs on the numerous roads, trails, and washes located in the range, and trail-bike riding occurs in those areas where the terrain is conducive to it (Wildlife 1.9, Recreation 6.4). ORV use in some areas may be incompatible with other recreational uses. On the other hand, off-road vehicles are essential to acquire access to some of the more rugged recreational areas without extensive road building. Use supervision is particularly important in the latter case to assure the access without a buildup of an extensive, unplanned network of ORV trails which could cause long-range watershed and vegetation damage.

Part of the range is traversed by utility rights-of-way, serving established use areas on the upper regions of the mountain (Lands 3.0). As additional development occurs, both of public recreational facilities and private lands, additional utility lines will be needed. Planning and control is needed to avoid unnecessary impacts on visual and vegetation resource values.

Wild horses are present in most of the higher elevations of the range (Wild Horses and Burros 1.1). Burros inhabit some of the lower elevations in the southeast and southwest areas of the range. These animals enhance the recreational experience from a sightseeing perspective. However, overuse of springs and riparian habitat, which is not uncommon with these animals, can degrade those areas for human use. Overuse of vegetation resources, by all animals including horses, can adversely affect the recreational values in the mountains.

A large portion of the area is under mineral lease or lease application for oil and gas. Some areas of the range have historic or active mining districts (Minerals 1.1). While minerals activities can cause both long- and short-term adverse impacts to the recreational use, opportunities exist in the "plan of operations" review stage to mitigate or avoid those conflicts.

Several areas of the mountain range are under study for possible wilderness designation. That current activity (Recreation 7.2) and the restriction on development in those areas pending a designation decision by Congress (Recreation 7.1) is supportive of non-motorized recreational activities.

The recent (June 24-July 2, 1981) fire at Cold Creek raises the question of whether that should continue to be the first RAMP developed. On one hand, the destruction by fire would make that area less desirable for recreation. On

(Recreation 5.1 continued)

the other, the proposed boundaries do include Willow Creek and the Wheeler Pass area, which were not affected. Proceeding with the RAMP now would also provide protective action to the burned area during its rehabilitation.

Multiple Use Recommendation:

Accept the recommendation as written. All resource activity planning in the Spring Mountain Range above the 5,000 foot contour is to be coordinated with and subordinated to recreational plans. (See Livestock Grazing 1.4 for a revised RAMP schedule.)

Support Needs:

U.S. Forest Service, all resource activities, NSO and DO recreation staff.

Reason:

The proposal, while ambitious, is responsive to the use demand which can be expected. In responding positively to projected demands prior to their full weight hitting the agency, the Bureau will be able to accommodate uses in a reasonable manner rather than having to react negatively and deny or prohibit uses until plans can be made.

Alternatives Considered:

1. Continue balanced multiple use activities.
2. Give RAMP priority to Kyle Canyon/Lee Canyon over Cold Creek/Wheeler Wash.

Decision:

Modify the MFP II recommendation as follows:

Prepare a series of RAMPs on critical use areas within the land use plan objective for gradual development of the Spring Mountains. (See Tables R 5.1-1 and R5.1-3). Within 10 years develop an overall master plan for recreational uses on the mountain range. The goal should be to maximize the recreation experience for the number of visitors the resource can tolerate. Type of use would vary from location to location but should include the following: overnight camping, picnicking, day-use activities such as historical sightseeing, certain kinds of ORV use, hiking, and other compatible activities as deemed appropriate. Current uses, such as mining, grazing, and forest products harvesting would not be restricted, but recreation

Reasons:

One comment expressed concern over the non-consideration of recreation resource needs below the 5000-foot elevation. The recommendation does not preclude recreation resource development below the 5000-foot elevation; it simply doesn't give that resource priority as it does for areas above the 5000-foot elevation. A second comment recommends consistency between the proposed RAMP and the Mt. Charleston Comprehensive Land Use Plan. Bureau planning policy requires such coordination, and support needs indicate close cooperation with the USFS which was intimately involved with the Mt. Charleston Comprehensive Land Use Plan development.

The above, the proposed amendments to the National Wildlife Refuge Act and the National Park Act, which have not yet been passed, are being considered by the House and Senate. The proposed amendments to the National Wildlife Refuge Act are being considered by the House and Senate. (Recreation 5.1 continued)

would become the major use in these mountains. Overall, developments would be at a relatively low level.

Since trailers and RVs are extremely popular, some provisions for them should be made. For the most part, roads should remain unpaved, campgrounds small, and facilities simple. Users should be expected to carry out their own trash, especially from remote areas.

Coordination with the Toiyabe National Forest, Mt. Charleston District, and public participation should be included in this planning project. Every effort will be made to make RAMP development consistent with the Mr. Charleston Comprehensive Land Use Plan policies.

All resource activity planning in the Spring Mountain Range above the 5,000 foot contour is to be coordinated with and subordinated to recreational plans. (See Livestock Grazing 1.4 for a revised RAMP schedule.)

Tables

R-5.1-1 Recommended approximate boundaries for each RAMP area is as follows:

<u>Area</u>	<u>Boundaries</u>
Cold Creek/Wheeler Wash:	North - 5,000' elevation and Mt. Stirling WSA East - 5,000' elevation South - Wallace Canyon West - Boundary of Mt. Stirling WSA
Trout/Lovell Canyons:	North - Toiyabe National Forest East - RRCRL boundary South - Pahrump highway West - Wallace Canyon
Kyle/Lee Canyons:	North - North boundary of Desert View N.A. East - approximately 5,000' elevation South - boundary of LaMadre Mountains WSA West - USFS boundary
Mt. Potosi:	North - Pahrump Highway (S.R. 161) East - Cottonwood Pass road South - Wilson Pass road West - Approximately 5,000' level

R-5.1-2 Phase in RAMPS as use pressure warrants; a recommended time table follows:

<u>Area</u>	<u>Begin Planning</u>	<u>Begin Implementation</u>
Cold Creek/Wheeler Wash	FY 83	FY 84
Trout Canyon/Lovell Canyon	FY 84	FY 85
Mt. Potosi	FY 84	FY 86
Kyle Canyon/Lee Canyon	FY 85	FY 87

R-5.1-3 In all RAMP areas, the following items must be assured:

- (a) Assure that access to the area exists on BLM or County roads. Easements over private roads should be considered only if no alternative exists.
- (b) Determine potability of surface waters throughout RAMP areas; provide drinking water in Cold Creek, Willow Creek, and Wheeler Wash areas, and elsewhere if feasible.
- (c) Coordinate with other resources which will affect the RAMP areas - hunting (wildlife), wilderness, watershed, range, and so forth, so that multiple-use values are retained.

Tables

B-1-1- Recommended approximate boundaries for each BAH area is as follows:

Area	Boundaries
Cold Creek/Wheeler Basin	North - 5,000' elevation and mt. skyline East - 5,000' elevation South - Wallace Canyon West - Boundary of N. Section VMA
Trout/Bear/Canyon	North - Teton National Forest East - RICKI Boundary South - Teton Highway West - Wallace Canyon
Kelley Canyon	North - North boundary of Boney VMA East - Approximately 5,000' elevation South - Boundary of Teton National Forest West - 100% boundary
Mr. Teton	North - Teton Highway (S.E. 141) East - Oldtimers Park road South - Wilson Park road West - Approximately 5,000' level

B-1-2 There is a table on the previous page; a recommended table follows:

Area	Boundaries	Begin
Cold Creek/Wheeler Basin	5,000'	5,000'
Trout/Bear/Canyon	5,000'	5,000'
Mr. Teton	5,000'	5,000'
Kelley Canyon	5,000'	5,000'

B-1-3 In all BAH areas, the following items must be removed:

- Remove that access to the area which is not for BAH use. Remove all private roads which are not needed for BAH use.
- Remove all vegetation of surface water throughout BAH areas, including water in Cold Creek, Wilson Creek, and Wheeler Wash areas, and elsewhere if feasible.
- Consistent with other resources which will affect the BAH areas - remove (eliminate, withdraw, remove, range, and so forth, as they affect) all other resources which will affect the BAH areas.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)

Clark County

Activity

Recreation

Objective Number

R-6

Objective 6.0:

Manage recreational off-road vehicle (ORV) use on public lands in Clark County by providing a spectrum of opportunities ranging from individual, casual travel to highly organized competitive events.

Rationale:

The recreational use of ORVs is recognized by BLM as a valid activity on public lands. Clark County has one of the highest ORV use levels in the nation when compared to other areas of similar size and population density. ORVs allow a large part of the population, who would otherwise not be able to physically reach isolated areas, to enjoy the natural environment. The use of motorcycles to sightsee and reach remote areas is becoming more popular.

Executive Order (EO) 11644, amended by EO 11989, directs the Secretary of the Interior to designate areas and trails on public lands as either open, limited, or closed to off-road vehicle use. The popularity of ORV use among residents of the county, its rapid growth, the terrain suitability for cross-country ORV travel, and the "wide-open spaces" typified by most of Clark County, all indicate an increasing demand for ORV use areas within the county.

Multiple Use Analysis

The objective is consistent with current Bureau policy. It is responsive to the widespread demand among the Southern Nevada public for recreational opportunities on the public lands that involve or require off-road vehicle usage.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Modify the objective as follows:
Manage and monitor recreational off-road vehicle (ORV) use on public lands in Clark County by providing a spectrum of opportunities ranging from individual, casual travel to highly organized competitive events.

Reasons:

One comment expressed concern over providing areas without also providing policing of the areas. The Bureau provides limited policing through our permit procedures and public information efforts. Policing on a larger scale is a long-term goal but is currently beyond BLM's financial capability.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Objective 1.0:

Manage recreational off-road vehicle (ORV) use on public lands in Clark County by providing a spectrum of opportunities ranging from individual, casual, to highly organized competitive events.

Background:

The recreational use of ORVs is recognized by BLM as a valid activity on public lands. Clark County has one of the highest ORV use levels in the nation when compared to other areas of similar size and population density. ORV use is a large part of the recreational life of the county. The use of ORVs is a highly organized competitive activity. The use of ORVs is a highly organized competitive activity. The use of ORVs is a highly organized competitive activity.

Executive Order (EO) 11644, amended by EO 11829, directs the Secretary of the Interior to designate areas and trails as public lands as either open, limited, or closed to off-road vehicle use. The purpose of ORV use management is to provide a spectrum of opportunities for the use of ORVs on public lands. The purpose of ORV use management is to provide a spectrum of opportunities for the use of ORVs on public lands. The purpose of ORV use management is to provide a spectrum of opportunities for the use of ORVs on public lands.

Policy and Goals Analysis

The objective is consistent with current Bureau policy. It is responsive to the widespread demand for the BLM to provide a spectrum of opportunities for the use of ORVs on public lands. The objective is consistent with current Bureau policy. It is responsive to the widespread demand for the BLM to provide a spectrum of opportunities for the use of ORVs on public lands.

Policy and Goals Analysis
Address the objective as written:

Facilities

Modify the objective as follows:
Manage and maintain recreational off-road vehicle (ORV) use on public lands in Clark County by providing a spectrum of opportunities ranging from individual, casual, to highly organized competitive events.

Management

The current stipulated concerns have provided areas without also providing protection of the area. The Bureau provides limited collecting through the permit process and provide information services. Policies as a land owner is a program goal but is currently beyond BLM's capacity.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County

Activity
Recreation

Overlay Reference

Step 1

Step 3

Recommendation 6.1:

Develop and institute a monitoring program for the entire county which would catalog the specific effects of different ORV uses on resources present. Implement the program during FY84.

Support Needs:

Soils, Watershed, Range, and Forestry programs.

Rationale:

To determine the suitability of areas to support or sustain a certain amount of ORV use, data relative to the number of ORVs in an area and the resources impacted needs to be collected and analyzed. In the future, the data accumulated would provide the Bureau a certain amount of flexibility to adjust management use decisions as the need arose. Use monitoring will allow the Bureau management flexibility by providing data as to seasons of use, and will help reduce visitor conflicts.

Multiple Use Analysis
(Includes Recreation 6.2 and 6.3)

Current off-road vehicle use in Clark County -- individual, organized, competitive, and noncompetitive -- is extensive and intense. The population increase in the county will generate an increase in ORV use, both recreational and other. Certain areas are used more intensively than others, depending upon the type of ORV use involved. As ORV use continues and increases, the resources impacted need to be studied through a monitoring system.

Many individuals feel recreational ORV use is an important part of their recreational pursuits. Controlling individual ORV use on BLM administered lands requires intensive management. Providing designated areas where individuals and families can enjoy a recreational ORV experience would serve to mitigate undue resource damage in other areas.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
NATIONAL MONUMENT - BUREAU OF LAND MANAGEMENT

Page 1 of 1
Date: 10/1/01
Section: 1000000000

Background:
To determine the suitability of areas to support a certain amount of OVM use, data collected in the past by OVM is an area and the resources impacted needs to be collected and analyzed. In the future, the data collected needs to provide the Bureau a certain amount of flexibility to make management decisions on the land areas. The monitoring will allow the Bureau management flexibility to provide data as to needs of use, and will help to make future decisions.

Background:
Bureau and landowners a monitoring program for the entire country which would collect the specific effects of OVM use on resources. Included in the program is:

Program:
Data, collected, future, and present

Multiple Use Analysis
(Include Section 1.1 and 1.2)

Current and future activities are in Class I only -- including, organized, competitive, and noncompetitive -- is extensive and diverse. The potential impacts to the country will be significant as resources in use are, both recreational and other. Current uses are used more intensively than other, depending upon the type of use involved. As OVM use continues to increase, the two uses involved need to be studied through a monitoring system.

Many individuals have recreational OVM use as an important part of their recreational program. Controlling individual OVM use and OVM activities and providing intensive management. Providing designated areas where individuals and families can enjoy a recreational OVM experience would help to achieve a more balanced design in other areas.

(Recreation 6.1 continued)

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

Off-road vehicle use in Clark County is increasing as the population grows, and a need is present to study the effects of ORV use on resources in specific areas. Considering the popularity of recreational ORV use in Clark County, it is important to provide suitable areas for individuals to pursue their ORV sport.

Support Needs:

All activities and programs, Nevada Division of State Parks.

Alternative Considered:

Allow for implementation of an ORV use monitoring program but do not allow for determination of suitable ORV recreation areas.

Decision:

Accept the recommendation as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Recreation

Overlay Reference

Step 1

Step 3

Recommendation 6.2:

Within 3 years, define and determine suitable areas for the following:

- a. Motorcycle Trail Systems Park(s): these would be designed for individual, family, and small group use, providing both point-to-point and closed loop sightseeing trails with day use and overnight camping opportunities.
- b. ORV Play Area(s): This would be designed for individual, family, and group use, providing day-use areas and overnight camping facilities.
- c. Motocross Park(s): This would have one or more closed-loop course areas and provide for adequate spectator areas.

Support Needs:

All activities.

Rationale:

ORV use continues to be a popular pastime in Clark County and appears to be on the rise. As use continues to increase, areas that now see intensive ORV use will undoubtedly be used more extensively and the resources of these areas might not be capable of sustaining this increased ORV demand. Providing additional ORV areas can help reduce unnecessary degradation of the natural environment, reduce conflicts with private landowners and authorized land users, and serve to keep ORV recreationists from being exposed to hazards. Supplying the ORV user with areas to use would help to provide a safer, more enjoyable recreational experience.

See Recreation 6.1 for multiple use analysis and recommendation.

Step 1	Step 3

Recommendation 6.3:

Provide for a portion of a cross-state trail for ORVs from the Las Vegas Dunes area through Meadow Valley Wash, then north to the Pony Express Trail.

Support Needs:

All activities.

Rationale:

A portion of a cross-state trail (Basin and Range Trail) as envisioned by the Nevada Division of State Parks (see Division of State Parks Memo dated 25 May 79; subj: Issues and Planning Summary, Clark County BLM MFP) would involve public lands.

Development of this trail would offer an excellent recreational experience for family-oriented ORV groups. The use would be constructive and provide opportunities for environmental education which would aid in resource protection.

See Recreation 6.1 for multiple use analysis and recommendation.

Recommendation A.1:
 Review the status of a proposed
 (Klein and Jones Trail) as well as
 the Nevada Division of State Parks
 (State Division of State Parks) and
 dated 22 May 1994. Issues and
 findings from the 1994 study and
 (KSP) would involve public lands.
 Development of this trail would offer
 an excellent recreational experience
 for family-oriented groups. The
 trail would be constructed and provide
 opportunities for environmental
 education which would aid in resource
 protection.

Recommendation A.2:
 Review the status of a proposed
 trail from the Las Vegas
 area through Indian Wells and
 then north to the Fort Carson trail.

Recommendation A.3:
 Review the status of a proposed
 trail from the Las Vegas
 area through Indian Wells and
 then north to the Fort Carson trail.

Recommendation A.4: for multiple use analysis and recommendation.

Step 1

Step 3

Recommendation 6.4:

Formally designate, during FY83, the county as to ORV use. Designate the county as "open" to ORV use, with the exception of the following areas, which would be designated as "limited":

a. Eldorado Mountains south of Knob Hill and north of the St. Louis Mine: elevation 4,000 feet and above.

1. Three or more wheeled vehicles: existing roads, trails, or washes.
2. Two-wheeled vehicles: trail riding authorized except on the Ireteba Peaks.

b. Las Vegas Valley: All vehicles.

1. Existing roads.
2. No competitive events unless authorized by the city or a county governmental agency.

c. McCullough Mountains south of McCullough Pass: elevation 5,200' and above.

1. Three or more wheeled vehicles: existing roads, trails, or washes.

d. McCullough Mountains north of McCullough Pass: elevation 3,200' and above.

1. Three or more wheeled vehicles: existing roads, trails, or washes.

e. Spring Mountains: that portion located between the Pahrump Highway and U.S. Highway 95 at 6,000' and above:

1. Three or more wheeled vehicles: existing roads, trails, or washes.

f. Arrow Canyon Range: elevation 3,200' and above:

Rationale:

Recreational off-road vehicle use is an extremely popular sport for many people in the county. The "wide open spaces" and its accessibility are important to the vast majority of residents. Remote and isolated areas can often times only be reached by ORVs. The area's harsh climate and lack of available potable water sources make it almost mandatory to carry an adequate supply of water while out recreating, and to do this often requires the use of some type of vehicle. Most of the county has terrain characteristics (low vegetation in a sparse density, broad expanses of relatively flat land, and few large rocks) which encourage cross-country ORV travel and provide for scenic trail-riding access. Currently, the resources of the county appear to be able to sustain the amount of unrestricted ORV use occurring and, even with the estimated population increase projected, the estimated increase in ORV use does not point to undue or unmitigatable resource impacts.

Executive Order 11644 (37 CFR 2877, as amended by EO 11989) requires all public lands to be designated either "open," "limited," or "closed" to ORV use.

Rationales for limitations in specific areas are shown below:

- (a) the terrain severely limits cross-country ORV travel;
- (b) population density and this valley being part of the Air Quality Nonattainment Area require limiting ORV travel;
- (c) the terrain limits cross-country ORV travel and the resources here

(Recreation 6.4 continued)

1. Three or more wheeled vehicles:
existing roads, trails, or washes.
- g. Overton Corridor: All vehicles.
 1. Existing roads or trails.
- h. Virgin Mountains: elevation 6,000' and above.
 1. Three or more wheeled vehicles:
existing roads, trails, or washes.
- i. Red Rock Canyon Recreation Lands: All vehicles.
 1. Designated roads.

necessitate limiting ORV travel for three or more wheeled vehicles;
(d) the terrain is such that cross-country ORV travel is severely limited;
(e) this area is an intensively used recreation area and indiscriminate ORV use can cause serious conflicts between users;
(f) the terrain severely limits cross-country ORV travel;
(g) this is a populated farming area requiring limitation of ORV travel;
(h) the terrain is rugged and limits cross-country ORV travel;
(i) this designated recreation land sees intensive recreational activities and indiscriminate ORV use causes serious conflicts between users.

Competitive, commercial, and organized events of 50+ vehicles are to be regulated through the Special Recreation Use Permit (SRUP) Program as defined in 43 CFR part 8372.

Multiple Use Analysis

(Includes Lands 3.4, Watershed 3.2, and Wildlife 1.3, 1.7, 1.8, 1.9, and 3.4)

Several different resource recommendations are in conflict with ORV use.

Wildlife 1.3 - Bighorn Sheep

- Restrict competitive ORV use to roads, trails, and washes in all habitat.
- No competitive events:
 - January 1-April 30 in lambing habitat;
 - May 1-September 30 in crucial summer habitat;
 - November 15-December 15 in habitat in hunting season.

- No competitive events in historic range for three years following reintroduction.

Wildlife 1.7 - Game Birds

- No competitive events within a half-mile of waters in crucial quail or chukar areas.

(Recreation 6.4 continued)

- Limit competitive events to existing roads, trails, and washes from .5 to 1.5 miles of waters in crucial areas.
- Limit noncompetitive use to roads, trails, and washes within a half-mile of waters in crucial areas.

Wildlife 1.8 - Mule Deer

- No competitive events within 1.5 miles of yearlong water from May 1 to September 30.
- Limit competitive and noncompetitive use to existing roads, trails, and washes in all deer habitat.

Wildlife 3.4 - Desert Tortoise

- No competitive events in crucial habitat.
- Limit competitive events in non-crucial habitat to existing roads and designated trails and washes.
- No competitive events in non-crucial habitat during the active period from March through September.

Watershed 3.2

- No competitive events within a quarter-mile of water sources.

Watershed 4.5 - Soils

- On soil areas with "severe" SSF and "critical" SSF plus high erosion hazard, limit recreational ORV use to existing roads and trails.
- On soil areas with "critical" SSF plus medium/low erosion hazard, and "moderate," "slight," or "stable" SSF plus high erosion hazard, limit organized or multi-vehicle use to existing roads and trails.

Wildlife 1.10 - Non-Game Birds/Gila Monster

- No ORV use in or within a quarter-mile of important desert wash habitat.

Recreation 1.6 - Red Rock Canyon

- Close to off-road vehicle use.
- Limit vehicles to designated roads and trails.

Section 1.1 - General

Section 1.6 - Conclusions

- The project is to be completed by the end of the year.

Section 1.7 - References

- The project is to be completed by the end of the year.

(Recreation 6.4 continued)

Recreation 2.1 - Horseback Riding

- Limit ORV use to designated roads and trails in the Spring Mountain.
- Close designated horseback riding trails in Las Vegas Wash/Rainbow Gardens/Sunrise Mountain to ORV use.

Recreation 2.2 - Hiking

- Limit use in Red Rocks and Spring Mountain to designated roads and trails.
- Limit use to existing roads and trails in Muddy and McCullough Mountains.

Recreation 2.8 - Hunting

- No competitive events in listed areas during hunting season.

Complementary recommendations are:

Lands 3.4: Maintain access to existing withdrawals, leases, rights-of-way, private lands, etc.

Minerals 1.2: Don't prohibit vehicular access to known mineralized areas.

Recreation 2.3, 2.4, 2.5, 2.6, 2.7, 2.8: Assure that access to the dispersed recreation areas discussed remains available on existing BLM, county, or State roads.

Fire 1.5: Maintain access for fire equipment on Wheeler Pass Road, Lovell Canyon Road, Old Pahrump Highway (88), and Red Rock Summit Road.

Recreational use of ORVs is a major public activity in Clark County. It also is of commercial importance for livestock management, wildlife habitat work by agencies, mineral exploration, etc. The ORV-related industry plays a major service role in the Southern Nevada economy.

Although the lands have never been formally designated, Clark County public lands have been managed for ORV use under MFP 3 decisions for "open," "closed," and "restricted" use areas since the mid-1970s. Those decisions were made with public involvement. A 1980 effort to develop designation orders based on those MFP 3 decisions was unsuccessful for a number of reasons. The public agreement made then was to designate in FY83 through this planning process.

There are three basic designation tools available: open to ORV use, closed to ORV use, and limited ORV use. The latter offers a number of options relative to types of vehicles, types of events, seasons of use, areas of use (roads, trails, or washes), etc.

(Recreation 6.4 continued)

Multiple Use Recommendation:
(temporary)

Develop, through an FY82 public participation effort and EA, a recommended, specific designation of public lands in Clark County as open, closed, or limited to ORV use.

Support Needs:
Public Affairs, all activities.

Reason:

As stated in Multiple Use Analysis.

Alternative Considered:

Use 1974-75 MFP 3 decisions as basis for designation.

Decision:

Designate public lands in Clark County as open, limited, or closed to ORV use as shown on MFP III Overlay Recreation 6.4.

A year-long cooperation and consultation process focused on ORV usage on public lands in Clark County resulted in the specific constraints on ORV use in certain areas as shown in Table R6.4.

Reasons:

One comment urged immediate closure of the road into Hidden Valley. This has been addressed through the ORV-CRMP process.

Public participation through the ORV-CRMP process was very active. A well represented cross-section of public user groups participated throughout the 18-month ORV-CRMP period. As many as 30 volunteers sat in committee meetings monthly throughout the period. These volunteers were charged with making recommendations to BLM management concerning the organized ORV use of areas in Clark County. All resource interests and concerned publics were represented throughout the process. The CRMP committee's recommendations will be incorporated into the final ORV designations.

TABLE R-6.4

MANAGEMENT OF ORV USAGE ON PUBLIC LANDS IN CLARK COUNTY

Area/Constraints	Management Actions
AREA 1 - Gold Butte (Virgin River from the Nevada-Arizona border south-west to LMRRA boundary, then south following the LMRRA boundary then east following the LMRRA boundary, then north and east following the LMRRA boundary until it intersects the Arizona-Nevada border): LIMITED.	1. Motorized travel in the Gold Butte area should be limited to existing roads, trails, and washes. Competition should be limited to non-speed events throughout the area. 2. Maps showing motorized vehicle access, similar to those published by the BLM for the California Desert, should be prepared for the Gold Butte area, as well as for other BLM areas in Las Vegas District considered under the ORV-CRMP process. These maps should show known routes of travel, points of interest, and "sensitive areas." 3. Monitoring programs should be established to provide use data for the next 10-year review. We recommend placing car-counting machines on the Gold Butte Road and a few of the major access routes leading from it to get an idea of the relative use by fisherman, miners, and ORV recreationists.
AREA 2 - Muddy Mountains/East Dry Lake Valley: LIMITED.	4. <u>Additional limitations for the Crucial Desert Tortoise Habitat Area*</u> No events of more than 3 laps Designated pitting areas Seasonal use from October-April Confined to existing roads, courses, trails, and sand washes Maximum of 3 events per year 1. The BLM should continue to manage the Muddy Mountains WSA under the Interim Management Procedures, with motorized travel restricted to current use, assuming no degradation. The Buffington Pockets area should be open to existing use levels, but the area should be marked as "sensitive" on vehicle access maps. 2. The Buffington Pocket-Colorrock Quarry travel corridor should continue at the present type of use, but be closed to high speed competitive events. 3. Competitive events in the desert tortoise habitat area should be limited to existing courses. BLM should attempt to limit creation of new trails by such non-ORV users as seismic crews. 4. Close to the road into Hidden Valley somewhere between the base of the slope and the top of the ridge. <u>Close Hidden Valley to ORV use.</u> 5. Buffington Pockets should be open to existing uses on existing roads, trails, and washes, but closed to high speed competitive events. 6. <u>Additional limitations for the Crucial Desert Tortoise Habitat Area*</u> No events of more than 3 laps Designated pitting areas Seasonal use from October-April Confined to existing roads, courses, trails, and sand washes Maximum of 3 events per year

Page numbering
of Table R-6.4
Reduced from 8 pages
to 6.

AREA 3 - Mormon Mesa Triangle/Meadow Valley Wash/Pahrnagat Wash: LIMITED.

1. The high mesa north of I-15 and west of the Carp/Elgin Road over to the eastern escarpment of the meadow Valley Wash shall be closed to competition except for a quarter-mile corridor bordering I-15 on the north.

The Carp/Elgin Road may be used for competition.

2. The area west of the escarpment to Highway 93, including Arrow Canyon. Pahrnagat Wash above Highway 7, Bunker Hills, and Meadow Valley Wash (with the exception of north of Farrier) high speed competitive ORV events limited as follows:

- a. Motorcycles - allow two non-pre-run races annually during November through April.

- b. Dune Buggies - allow one pre-run race annually during November through April on a designated route to include the old U.S. 93 and a route to be determined along Highway 7.

- c. BLM should use caution in siting pit areas and manage the Arrow Canyon area as sensitive.

3. No competitive events will be permitted in Meadow Valley Wash Canyon north of Farrier.

4. Allow no high speed competitive ORV events in Arrow Canyon between the upper sand dune and the dam.

5. The Lower Mormon Mesa area is OPEN.

6. The area North of I-15 from the Carp/Elgin Road east to the Nevada/Arizona border is OPEN.

7. Additional limitations for the Crucial Desert Tortoise Habitat Area*

No events of more than 3 laps
Designated pitting areas
Seasonal use from October-April
Confined to existing roads, courses, trails, and sand washes
Maximum of 3 events per year

AREA 4 - Arrow Canyon Range/West of I-15, South of Highway 7, Dry Lake Valley/Area Along Southern and Western Boundary of Desert Game Range: LIMITED.

1. Area bounded by the Arrow Canyon Range on the east, Highway 7 on the north, the Desert National Wildlife Range on the west, and on an east/west line from the bend in Highway 93 on the south: LIMITED - competitive high speed ORV event should be limited to a designated corridor along the future powerline road on the east side of Highway 93. Protective fencing should be installed around the prehistoric rock alignment.

2. Balance of Area 4 is OPEN.

3. Additional limitations for the Crucial Desert Tortoise Habitat Area*

No events of more than 3 laps
Designated pitting areas
Seasonal use from October-April
Confined to existing roads, courses, trails, and sand washes
Maximum of 3 events per year

AREA 5 - Spring Mountain Range (Less Red Rock Canyon Recreation Lands): LIMITED.

1. Existing roads should remain open.
2. Area from 5,000 feet on the southwest side over the ridge east and down to Highway 95 on the northeast

1. The first part of the report is a general statement of the purpose and scope of the study. It is followed by a brief review of the literature on the subject.

The following table shows the results of the study.

2. The second part of the report is a detailed description of the methods used in the study. This includes a description of the subjects, the materials, and the procedures.

3. The third part of the report is a discussion of the results of the study. This includes a comparison of the results with the findings of other studies.

4. The fourth part of the report is a conclusion. This summarizes the main findings of the study and discusses their implications.

5. The fifth part of the report is a list of references. This includes all the sources used in the study.

6. The sixth part of the report is an appendix. This contains additional information that is not included in the main text.

7. The seventh part of the report is a glossary. This defines the terms used in the study.

8. The eighth part of the report is a list of figures. This includes all the figures used in the study.

10. The tenth part of the report is a list of appendices. This includes all the appendices used in the study.

11. The eleventh part of the report is a list of references. This includes all the sources used in the study.

12. The twelfth part of the report is a list of figures. This includes all the figures used in the study.

13. The thirteenth part of the report is a list of tables. This includes all the tables used in the study.

14. The fourteenth part of the report is a list of appendices. This includes all the appendices used in the study.

15. The fifteenth part of the report is a list of references. This includes all the sources used in the study.

16. The sixteenth part of the report is a list of figures. This includes all the figures used in the study.

17. The seventeenth part of the report is a list of tables. This includes all the tables used in the study.

side should be closed to high-speed competitive events.

3. WSAs should be managed at existing levels of use.

4. Small to moderate non-speed events can be conducted on the east and northeast flanks of the Spring Mountain Range (from the Blue Diamond Road to the county line near point of Rocks).

5. The Trout-Lovell Canyon BLM road should be open to street legal performance rally-type events.

6. The Pahrump side of the Spring Mountain Range below 5,000 feet should be open to high-speed competitive events.

7. Additional limitations for the Crucial Desert Tortoise Habitat Area*

No events of more than 3 laps

Designated pitting areas

Seasonal use from October-April

Confined to existing roads, courses, trails, and sand washes

Maximum of 3 events per year

AREA 5 - Red Rock Canyon Recreation Lands: LIMITED.

1. Rocky Gap Road

Because of exorbitantly high reconstruction and maintenance costs, and concomitant dangers to the public, eliminate the Rocky Gap Road as a BLM-maintained road.

2. Brownstone Canyon

a. Because of its archaeological values and its sensitivity (designated as an archaeological district in the National Register of Historic Places listings 8/82), Brownstone Canyon should be fenced at the boundary of BLM Lands, with a gate to provide foot access beyond that point.

b. At the gate in the fence, and at areas of specific interest within the proposed fence, interpretive signs should be placed to educate the public about the unique cultural values in Brownstone Canyon.

c. The access road to the fence should be improved for passenger car access, and there should be an improved parking area at the gate, with picnic tables and garbage cans.

d. Vehicles access beyond the fence may be provided through a BLM permit for the elderly, disabled, and other groups as needed.

3. Oak Creek Canyon Road

a. The existing Oak Creek Canyon Road should be improved to provide passenger car access to a point short of Potato Hill, and a definite, developed road terminus should be constructed, including a graded parking area, picnic tables, and garbage cans.

b. Access beyond that point toward Oak Creek Canyon should be limited by physical barriers to prevent ORV incursions...

c. Overnight camping facilities should be developed around the road terminus area, commensurate with the reasonable carrying capacity of the area. Such facilities should include tables, parking spots for passenger cars, and toilets.

d. Areas for which suitable overnight facilities cannot be provided should be closed or restricted with physical barriers until such time as funds are available for proper development.

4. Area South of Bonnie Springs Ranch

a. Efforts should be made, as funds become available, to upgrade the roads in this southern area to passenger car status.

b. Further extension of existing roads should be prevented by providing definite terminations of these roads with appropriate developments. Such developments include: graded parking areas; picnic table; garbage cans; physical barriers to further vehicle travel; interpretive signs; and trail markers.

5. General Provisions

a. Vehicle usage throughout the Red Rock Canyon Recreation Lands should be on a designated road basis, with the designation of roads to be done by either BLM or the Nevada State Parks Division.

b. Aid of ORV clubs should be sought in erecting signs to prevent travel off of designated roads. In particular, signs at the Red Rock Summit, Oak Creek Canyon, and Brownstone Canyon would be helpful.

AREA 6 - Area east I-15, North of Graded Nelson Highway and McCullough Pass, West of Lake Mead Recreation Area, South of Boulder City and Henderson: LIMITED.

1. Close McCullough Pass to competitive events during July and August.
2. Allow no competitive use in Wilderness Study Areas.
3. When scheduling competitive events, give special consideration to bighorn sheep hunting season.
4. Limit competitive use within one-quarter mile of wildlife guzzlers and livestock waters.

5. Additional limitations for the Crucial Desert Tortoise Habitat Area*

No events of more than 3 laps
Designated pitting areas
Seasonal use from October-April
Confined to existing roads, courses, trails, and sand washes
Maximum of 3 events per year

No competitive, high speed ORV events.

AREA 7 - Las Vegas Sub-Unit and Boulder City (Balance of sub-unit not within Areas 2, 6, 8, 9 and 10): LIMITED.

AREA 8 - Las Vegas Wash/Rainbow Gardens/Frenchman Mountain Area: LIMITED.

1. Allow no high speed competitive events.
2. Phase out other competitive events on those roads in Rainbow Gardens which are developed into equestrian or hiking trails.
3. Allow no competitive ORV events within the proposed boundaries of the Desert Wetlands Park.

AREA 9 - River Mountains: LIMITED.

Sheep management should be the highest priority use for the River Mountains above the 2,400 foot contour.

AREA 10 - Area within the Las Vegas Sub-Unit bounded on the north by the Pahrump Highway (SR-160) and on the east by I-15: LIMITED.

Allow no high speed competitive ORV events.

AREA 11 - Southern Spring Mountains and Bird Springs Range Above the 4000 foot and 5000 foot elevations (see map for specific locations): LIMITED.

1. Area closed to pre-run events November-January.

2. Area allowed no more than 3 pre-run events, May-August.

3. Area open February-April, September and October.

AREA 12 - Area west of I-15 south of the Panrump Highway (SR 160), below the 4000 foot elevation of the Bird Springs Range/Southern Spring Mountains and north of the Goodsprings Highway: LIMITED.

1. High speed competitive ORV use is limited to existing roads, trails, washes and courses.

2. Additional limitations for the Crucial Desert Tortoise Habitat areas*

No events of more than 3 laps.
Designated pitting areas.
Seasonal use from October-April.
Confined to existing roads, courses, trails, and sand washes
Maximum of 3 events per year

AREA 13 - Area west of I-15, south of the Goodsprings Highway, and east of the 4000 foot contour of the Spring Mountains: LIMITED.

1. High speed competitive ORV use is limited to existing roads, trails, washes, and courses.

2. Additional limitations for the Crucial Desert Tortoise Habitat areas*

No events of more than 3 laps.
Designated pitting areas.
Seasonal use from October-April.
Confined to existing roads, courses, trails, and sand washes
Maximum of 3 events per year.

AREA 14 - Area east of I-15, west of and including the Las Vegas 400 course, and South of Jean dry lake to the Nevada/California border: LIMITED.

1. Open to competitive ORV use.

2. So. McCullough WSA should be protected under Interim Management Procedures, i.e., no high speed ORV competitive events should be authorized.

3. Additional limitations for the Crucial Desert Tortoise Habitat Areas*

No events of more than 3 laps
Designated pitting areas
Seasonal use from October-April
Confined to existing roads, courses, trails, and sand washes

AREA 15 - Piute Valley - Area South of the graded Nelson Highway and McCullough Pass south to the Nevada-California excluding the Piute Valley Crucial Desert Tortoise Habitat border: LIMITED *

1. Non-Spectator Events (Motorcycles)

Limit to 200 participants
No pre-run events
Avoid all game season opening weekends
Maintain a 1/2 mile buffer from all cattle waters and a 1/4 mile buffer from all other waters.

Additional limitations for the Crucial Desert Tortoise Habitat areas*

No events of more than 3 laps
Designated pitting areas
Seasonal use from October-April
Confined to existing roads, courses, trails, and sand washes

2. Sport Car Rallies (only street legal)

Limited to 200 participants
Confined to designated routes
Seasonal use from October to April in Crucial Desert Tortoise Habitat*

3. Non-speed Events (All types of vehicles)

Limited to 200 participants
Avoid all game season opening weekends
No multiple lapped events
Seasonal use from October to April in Crucial Desert Tortoise Habitat*

4. Spectator Speed Events (4x4s, Dune Buggies, Motorcycles)

Entrants will not exceed 200.

Courses will not be allowed within 1/4 mile of water sources (springs, seeps and guzzlers).

Prerun will be limited to one week prior to start of event.

Additional limitations for the Crucial Desert Tortoise Habitat area*

No events of more than 3 laps
Designated pitting areas
Seasonal use from October-April
Confined to existing roads, courses, trails, and sand washes

1. Non-Spectator Events (Motorcycles)

Limit to 200 participants
No pre-run events
Avoid all game season opening weekends
Maintain a 1/2 mile buffer from all cattle waters and a 1/4 mile buffer from all other waters.

Additional limitations for the Crucial Desert Tortoise Habitat areas*

No events of more than 3 laps
Designated pitting areas
Seasonal use from October-April
Confined to existing roads, courses, trails, and sand washes
Maximum of 3 events per year

2. Short Car Rallies (only street legal)

Limited to 200 participants
Confined to designated routes
Seasonal use from October to April in Crucial Desert Tortoise Habitat*

3. Non-speed Events (all types of vehicles)

Limited to 200 participants
Avoid all game season opening weekends
No multiple lapped events
Seasonal use from October to April in Crucial Desert Tortoise Habitat*

4. Spectator Speed Events (4x4s, Dune Buggies, Motorcycles)

No spectator speed events in desert tortoise crucial habitat.*

Entrants will not exceed 150.

Courses will be limited to existing roads, trails and dry washes.

Courses will not be allowed within 1/4 mile of water sources (springs, seeps and guzzlers).

One event per year limited to that time of year between the close of quail hunting season and March 15.

Start-finish, pitting and spectator areas will be designated within

T.32S., R.66E., Sec. 9, 14, 15 and 16 when on public land.

Courses will be limited to four laps.

Pre-run will be limited to one week prior to start of event.

Entire area closed to competitive ORV use.

AREA 15a - Area including the Piute Valley Crucial Desert Tortoise Habitat (Moderate-High, High Density) to the Lake Mead boundary and south to the California/Arizona borders: LIMITED.

AREA 16 - Searchlight Township Buffer Zone: LIMITED.

*Crucial Desert Tortoise Habitat will be that area defined as having greater than three adjusted sign (50" tortoise per square mile-moderate density), except that in Piute Valley it will be defined as that area having greater than seven adjusted sign (90" tortoise per square mile-moderate-high and high density).

1. General - The purpose of this report is to provide a summary of the results of the study conducted over a period of six months.

2. Objectives - The main objectives of the study were to determine the effect of the new treatment on the growth rate of the plants and to compare the results with those obtained from the control group.

3. Methodology - The study was conducted using a randomized controlled trial design. The plants were divided into two groups: a control group and an experimental group. The experimental group received the new treatment, while the control group received the standard treatment.

4. Results - The results of the study showed that the new treatment had a significant positive effect on the growth rate of the plants. The plants in the experimental group grew faster than those in the control group.

5. Conclusion - The study concluded that the new treatment is effective in promoting plant growth and is a promising alternative to the standard treatment.

6. Recommendations - It is recommended that the new treatment be used in future studies to further investigate its effects on plant growth. Additionally, further research is needed to determine the optimal dosage and timing of the treatment.

7. References - The following references were consulted during the study:

8. Appendix - The appendix contains the raw data collected during the study, as well as the calculations used to determine the growth rate of the plants.

9. Summary - This report provides a comprehensive overview of the study, including the objectives, methodology, results, and conclusions.

10. Conclusion - The study concluded that the new treatment is effective in promoting plant growth and is a promising alternative to the standard treatment.

11. References - The following references were consulted during the study:

12. Appendix - The appendix contains the raw data collected during the study, as well as the calculations used to determine the growth rate of the plants.

13. Summary - This report provides a comprehensive overview of the study, including the objectives, methodology, results, and conclusions.

14. Conclusion - The study concluded that the new treatment is effective in promoting plant growth and is a promising alternative to the standard treatment.

15. References - The following references were consulted during the study:

16. Appendix - The appendix contains the raw data collected during the study, as well as the calculations used to determine the growth rate of the plants.

17. Summary - This report provides a comprehensive overview of the study, including the objectives, methodology, results, and conclusions.

18. Conclusion - The study concluded that the new treatment is effective in promoting plant growth and is a promising alternative to the standard treatment.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Recreation
Objective Number
R-7

Objective 7.0:

Protect Wilderness Study Areas within Clark County to maintain potential suitability for inclusion into the National Wilderness Preservation System, until such time that Congress designates them as wilderness or releases them from further wilderness consideration.

Rationale:

With the passage of the Federal Land Policy and Management Act of 1976, the Bureau was mandated to inventory and study all public lands for possible inclusion into the National Wilderness Preservation System by October 21, 1991.

A wilderness experience has a unique recreational value. Such specialized recreational values should be preserved and made available for education and enjoyment of the general public. The preservation of wilderness areas will enhance the quality of life for succeeding generations. The loss of these areas would result in the loss of environmental factors that have contributed significantly to the cultures of the past and to the experiences of the present publics.

Multiple Use Analysis

This objective conforms with requirements of law and Bureau policy.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Accept the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVE

Activity
Objectives
Priority
Status
Comments

Objective 1.0:

Protect wilderness study areas within Class I lands to maintain potential
viability for inclusion into the National Wilderness Preservation System.
Identify such areas that possess characteristics that are wilderness or release them
from further wilderness consideration.

Justification:

With the passage of the Federal Land Policy and Management Act of 1976, the
Bureau was mandated to inventory and study all public lands for possible
inclusion into the National Wilderness Preservation System by October 31,
1981.

A wilderness area is defined as a region of unimpaired natural values, such as
scenic, scientific, or historic, which is worthy of preservation and which is
sufficiently large and untrammeled as to provide for the enjoyment of the
present and future generations. The preservation of wilderness areas will
enhance the quality of life for present and future generations. The loss of these
areas would result in the loss of environmental factors that have contributed
significantly to the richness of the past and to the enjoyment of the
present people.

Wilderness Use Analysis

This objective conforms with requirements of law and Bureau policy.

Wilderness Use - Summary:

Area: The objective is to...

Step 1

Step 3

Recommendation 7.1:

Manage Clark County within the guidelines of the Interim Management Policy for Lands Under Wilderness Review so that wilderness characteristics of these lands remain until such time as the areas are included into the National Wilderness Preservation System or are released from further consideration by Congress.

Support Needs:

All Divisions of the Las Vegas District Office.

Rationale:

The Federal Land Policy and Management Act of 1976 states that the Bureau of Land Management will manage their lands on the basis provided by the Interim Management Policy for Lands Under Wilderness Review until such time that the land has either been cleared from further study or has been designated into the National Preservation System. This interim management provides continued use of the land while studies are being made. It will be the impact of an activity on the land and its effect on the wilderness potential, not the activity itself, that will determine whether this use is to be allowed to continue or to be regulated while wilderness reviews are being made.

Multiple Use Analysis

While some resource uses conflict with wilderness, e.g., mineral exploitation, the Interim Management Policy forecloses any management discretion to significantly alter the natural appearance of a Wilderness Study area except for valid existing rights and grandfathered activities associated with grazing, mining, and mineral leasing.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

As stated in the Multiple Use analysis.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None

BUREAU OF LAND MANAGEMENT

MANAGEMENT PLANNING PLAN
FOR THE LANDS WITHIN THE

Page 1
Date 1/1/77
Bureau of Land Management
Department of the Interior
Washington, D.C. 20500

Background:

The Bureau of Land Management (BLM) is responsible for the management of the public lands within the State of Nevada. The BLM is a part of the Department of the Interior, which is responsible for the management of the Nation's natural resources. The BLM's mission is to manage the public lands for the benefit of the present and future generations. The BLM's management plan is a document that describes the BLM's management goals, objectives, and strategies for the public lands within the State of Nevada. The BLM's management plan is a living document that is updated as needed to reflect changes in the BLM's management goals, objectives, and strategies.

Report Number:

All revisions of the Land Management Plan
are identified by a revision number.

Introduction:

The Federal Land Policy and Management Act (FLPMA) of 1976 states that the Bureau of Land Management (BLM) is responsible for the management of the public lands within the State of Nevada. The BLM is a part of the Department of the Interior, which is responsible for the management of the Nation's natural resources. The BLM's mission is to manage the public lands for the benefit of the present and future generations. The BLM's management plan is a document that describes the BLM's management goals, objectives, and strategies for the public lands within the State of Nevada. The BLM's management plan is a living document that is updated as needed to reflect changes in the BLM's management goals, objectives, and strategies.

Management Plan:

The BLM's management plan is a document that describes the BLM's management goals, objectives, and strategies for the public lands within the State of Nevada. The BLM's management plan is a living document that is updated as needed to reflect changes in the BLM's management goals, objectives, and strategies. The BLM's management plan is a document that describes the BLM's management goals, objectives, and strategies for the public lands within the State of Nevada. The BLM's management plan is a living document that is updated as needed to reflect changes in the BLM's management goals, objectives, and strategies.

Personnel:

As stated in the BLM's Management Plan, the BLM is responsible for the management of the public lands within the State of Nevada.

Management Plan:

The BLM's management plan is a document that describes the BLM's management goals, objectives, and strategies for the public lands within the State of Nevada.

Management Plan:

The BLM's management plan is a document that describes the BLM's management goals, objectives, and strategies for the public lands within the State of Nevada.

Management Plan:

The BLM's management plan is a document that describes the BLM's management goals, objectives, and strategies for the public lands within the State of Nevada.

(Recreation 7.1 continued)

Decision:

Accept the recommendation as written.

Reasons:

One comment stated that Wilderness Areas should not be exploited or ruined by mining or by oil and gas exploration. The decision provides for the management of Clark County's Wilderness Study Areas (WSAs) according to the Interim Management Policy for Lands Under Wilderness Review. This policy protects WSAs from activities which would destroy their wilderness character. However, this policy is subject to valid existing rights for a variety of activities, including mining and oil and gas exploration.

One comment stated that should WSAs be designated as Wilderness Areas, they would need to be managed and not neglected. Should any WSAs be designated, a management plan would be prepared for each of them according to the guidelines in BLM's Wilderness Management Policy.

Step 1	Step 3

Recommendation 7.2:

Complete the study phase of all Wilderness Study Areas and make recommendations to the Secretary on all suitable and unsuitable study areas found within Clark County by December 31, 1985.

Support Needs:

The maximum available manpower will be required to complete the wilderness study phase on the county.

Rationale:

The Federal Land Policy and Management Act of 1976 mandates that all public land will be inventoried and recommendations will be made from the findings for possible inclusion into the National Wilderness Preservation System by October 21, 1991.

Multiple Use Analysis

This scheduling is determined by Bureau policy and is not subject to District management discretion.

Multiple Use Recommendation:

The following MFP II recommendations were developed in the Fall of 1982 in order to work into the required Wilderness study/ PFEIS slated for completion by the end of FY83. No MFP III decision, as such, will be made by BLM. Congress will decide what areas, if any, will be designated as part of the National Wilderness Preservation System.

Reason:

As stated in the Multiple Use analysis.

Project Location: _____
Project Status: _____
Project Date: _____

The Federal Land Policy and Management Act of 1976 mandates that all public land will be inventoried and two-step objectives will be met: first, findings for inventory and second, the National Wilderness Preservation System by October 31, 1993.

Inventory of the study phase of all wilderness study areas and areas recommended to the Secretary on all suitable and non-suitable study areas found within State County by December 31, 1993.

Inventory of the study phase of all wilderness study areas and areas recommended to the Secretary on all suitable and non-suitable study areas found within State County by December 31, 1993.

This scheduling is determined by current policy and is not subject to change. Management Decision.

Inventory of the study phase of all wilderness study areas and areas recommended to the Secretary on all suitable and non-suitable study areas found within State County by December 31, 1993.

(Recreation 7.2 continued)

Recommendation:

NV-050-0215

Arrow Canyon Range

Recommend 26,892 acres as suitable for wilderness designation. Adjust the boundary by moving it inward toward the topographic elevation of the ridgelines. This change would move the boundary in along the northwest side to about the 2,400' contour line. As the slope of the terrain gradually rises to the south, the boundary would also rise to the 2,800' contour and finally to the 3,200' contour just north of the 3,200' contour just north of the peak at 4,043'. From there, the boundary turns east, follows a wash and skirts around the old Ute Mine to the north. From the mine, it follows the 3,200' and 3,600' contour lines north for almost three miles. At elevation point 3,768, the boundary starts to turn east and runs across relatively flat open country toward Battleship Wash. It eventually heads north up a wash until it finally reaches Arrow Canyon. From there, the boundary crosses the canyon and follows the north side until it gets to Double Canyon; from there, it follows the 2,200' contour to close on the north end of the unit.

Rationale:

The unit has the capabilities of withstanding encroachment from outside with its massive vertical topographic relief. This allows the area protection by itself and eliminates some manageability problems.

(Recreation 7.2 continued)

Recommendation:

NV-050-0229

Muddy Mountains

Recommend 35,436 acres as suitable for wilderness designation. Adjust the boundary to exclude those areas which are not manageable.

The new boundary should start just southe of Colorock Quarry at the 3,200' contour line heading in a northwest direction. This contour line should be followed west all the way to Section 16, R.64E., T.19S. From here it turns to the southeast and follows a series of ridgelines and contours on or between the 2,600' and 2,400' level. In Section 2, R.64E., T.20S., the line turns to the east and continues along the 2,600' contour. Then in Section 3, R.65E., T.20S., the boundary turns south and runs through the Gale Hills to Lovell Wash still following the 2,600' contour. At the southeast corner of Section 11, R.65E., T.20S., the line connects with the National Park Service boundary and follows it north and east. In Section 1, R.65E., T.20S., the line turns north at elevation point 3,378' and continues to point 3,547'. From here, the line follows the 3,200' contour all the way back to Colorock Quarry, a distance of six miles.

Rationale:

The original USA boundary was determined on wilderness characteristics and did not include manageability. When a close look at that boundary revealed portions of land that was unmanageable under the Interim Management Guidelines, the boundary change was needed.

Section 7-1
Section 7-1
Section 7-1

Section 7-1
The original 1944 boundary was
established on the basis of
a survey of the area and the
results of the survey. The
survey was conducted by the
Department of the Interior and
the results were published in
the Department of the Interior
Bulletin, No. 1000, in 1944.
The boundary was established
on the basis of the survey and
the results of the survey.

Section 7-1
The boundary was established
on the basis of the survey and
the results of the survey.

The new boundary should start at
the mouth of the River at the
1,700' contour line passing to a
point in the river. This point
line should be followed west to the
1,700' contour line, 1,700' to 1,700'.
From here it runs to the northwest
and follows a series of ridges and
contours on an average of 1,700' and
1,700' level. In Section 7-1, 1,700'.
1,700', the line runs to the east and
continues along the 1,700' contour.
Then it crosses to 1,700' to 1,700'. The
boundary runs north and east through
the line runs to the river. The line
follows the 1,700' contour. At the
mouth of the River at Section 7-1,
1,700', 1,700'. The line crosses to the
the bottom of the River at Section
7-1, 1,700' to 1,700'. The line runs
north at a contour point 1,700' and
continues to point 1,700'. The line
the line follows the 1,700' contour
all the way back to the River at
the mouth of the River.

(Recreation 7.2 continued)

Recommendation:

NV-050-0401

Mount Stirling

Recommend 44,383 acres as suitable for wilderness designation. Redefine the boundary along the periphery of the unit to exclude those acres which cannot be protected by natural elevational barriers. The new boundary would start at Mount Stirling and head south, following the general contour line of predominance. This line, ranging from 5,800' to 6,200' elevation, slowly angles southeast in and out of the many canyons and washes. A series of developed spring sites can be found on the west perimeter of the area as the line continues to the southeast and finally turns east just before Horse Springs. From here, it gradually bends around to the north, again following the predominant elevation change located between the 6,400' contour line and 7,200'. The line passes just west of the Wheeler Pass Charcoal Kilns and Wheeler Well, and continues north until it turns east in Section 12, R.54E., T.17S. and loops back south for several miles on the 7,200' contour. Following this interval, it slowly bends north again and ties in directly with elevation point 8,453'. This general area includes Wheeler Peak, which the boundary encloses by looping around the upper portion of the mountain and slowly starting to round to the west on the 6,000' contour. The line continues west for almost ten miles again following the contour in and out of the many canyons and washes. Big Timber Spring can be found just inside the boundary as it nears the Mount Stirling Peak. Gold Spring is found just to the north of the peak as well as Jaybird and Rock Springs, and none are included in the area. This completes the boundary of the area.

Rationale:

This unit has the capability of withstanding encroachment from the outside due to its vertical topographic relief. This allows the area protection by itself and eliminates some of the manageability problems.

Section 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100

Section 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100

Section 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100

(Recreation 7.2 continued)

Recommendation:

NV-050-0412

La Madre Mountains

Recommend 52,671 acres as suitable for wilderness designation. Define the boundary to start at the Sky Mountain, Ranch Section 34, R.57E., T.20S., and heading north, follow the Lovell Canyon Road until it intersects the Red Rock Summit Road. Here the boundary turns east and follows the road around La Madre Spring, turning southe to Willow Spring, and following a road to White Rock Spring. From this spring, the boundary turns to the east from elevation point 5,340' and runs past Sandstone Quarry to elevation point 4,951' found jin Section 36, R.58E., T.20S. From here the boundary turns to the north, crosses a wash to a ridge in Section 25, R.58E., T.20S., and then crosses Brownstone Canyon through a wash to the base of a ridge in Section 12, R.58E., T20S. The boundary then turns east across elevation point 7,022' to point 5,591', turning north to point 4,041'. From this point the boundary crosses a wash to elevation point 4,252', where it bends west and follows the 4,400' contour for several miles to point 4,870' in Section 36, R.58E., T.19S. The boundary continues in a westerly direction following contour lines ranging from 4,800' to 5,600. In Section 5, R.58E., T.20S., the line stays to the south of Prospect Spring to point 6,504', then continues on the 6,400' contour to the Harris Springs Road and follows it to the U.S. Forest Service boundary found on the section line between Sections 9 and 10, R.57E., T.20S. From here the boundary to the NW corner of Section 14, R.56E., T.20S. Then it follows down the section lines south to the Lovell Summit road, a distance of four miles. At the road the boundary turns east and follows it to Section 33, R.57E., T.20S., where it turns north and follows the 6,200' line around the

Rationale:

The original studyt area boundary was established strictly on the basis of wilderness characteristics and did not take managability into account. Although the total WSA appeared natural, portions of the unit did not offer a natural barrier from encroachment. The new boundary excludes those portions of the original WSA that appear unmanageable.

(Recreation 7.2 continued)

Recommendation:

NV-050-0215

La Madre Mountains (cont.)

Sky Mountain Ranch to the ridge where this description started.

NV-050-0414

Pine Creek

Recommend 21,840 acres as suitable for wilderness designation. Refine the boundary to start at the southwest corner of the WSA, and follow a direct line from Rainbow Springs east to elevation point 6,246'. From here the boundary follows the 6,000' contour to the south until it connects with elevation point 5,984' in Section 28, R.58E., T.22S.. From this elevation point, the boundary drops south to the 5,200' contour line and bends gradually to the east until it connects with the base of the Red Rock Escarpment. At this point, the boundary heads due north following the base of the escarpment, just to the west of the private inholdings and development, and continues all the way to the Willow Springs recreation day use area. From here, the boundary follows the Red Rock Summit road to the west and all the way until the line intersects the telephone right-of-way found along the east side of the Lovell Canyon road. At the right-of-way, the boundary turns south and parallels the telephone line until it intersects the Rainbow Springs road.

Rationale:

The original study area boundary was established strictly on the basis of wilderness characteristics and did not take manageability into account. One change to enhance manageability includes elimination of a narrow finger of land which protrudes from the unit. The other change eliminates a small number of acres adjacent to the powerline corridor on the south end of the unit.

(Recreation 7.2 continued)

Recommendation:

NV-050-0425

North McCullough Mtns.

Recommend the WSA nonsuitable for wilderness designation. Return the 52,258 acres to multiple use.

Rationale:

The WSA has a solitary knife shaped range of mountains along its eastern boundary. The terrain along this side of the range drops off creating a series of cliffs stairstepping all the way to the boundary. This formidable barrier creates an impassable natural wall to eliminate any intrusions by man. The west side of the range slopes in a gradual rolling bajada broken by many washes and draws. This entire side allows easy access to motorized vehicles. At least 80 percent of the unit is impacted by this accessibility, making the area virtually impossible to manage in a natural state.

NV-050-0435

South McCullough Mtns.

Recommend 22,940 acres as suitable for wilderness designation. Adjust the boundary inward to the predominant elevation change which would eliminate the majority of intrusions from encroachment. Starting at the north end of the unit in Section 34, R.61E., T.25S., the boundary would run west across a series of ridges until it hits a major wash and turns south. Following this wash at about the 4,000-foot contour line, continue south along the predominant elevation for almost thirteen miles. The elevation change varies from 4,000-foot to the 5,600-foot contour. The boundary turns east in Section 6, R.61E., T.28S., and turns sharply north along the 6,000-foot contour in Section 4, R.61E., T.28S. The boundary line continues north following contour lines ranging from 6,000 feet to 4,000 feet all the way to Section 35, R.61E., T.25S., where the line turns to the west and ties back into the ridge that started in Section 34.

The unit has the capability to protect itself from encroachment of intrusions due to its vertical topography. The boundary adjustment allows the use of this natural barrier and permits protection to the area.

Section 1003

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Cultural Resources
Objective Number
CR-1

Objective 1.0:

Significant cultural resource properties on public lands in Clark County will be subject to one or more protection and/or stabilization measures. An adjunct of protection is the limitation of off-road vehicle (ORV) activity in certain sensitive areas.

Rationale:

BLM Manual 8100 acknowledges the Bureau's responsibility to manage cultural resources on public lands. The National Environmental Policy Act of 1969 and the Federal Land Management and Policy Act of 1976 also mandate protection of important archaeological, historical, and scientific values.

Protection and stabilization are two key components of the Bureau's cultural resource program. Protection can be accomplished in a variety of ways including such physical protection methods as signing, barriers, enclosures, and gates. Stabilization is accomplished through various physical measures which negate natural forces affecting a site.

Limitations on ORV activity in sensitive areas will protect cultural resources from physical damage the vehicles can cause and eliminate or curtail "pothunting" and other degrading activities encouraged by ready access to important sites.

Multiple Use Analysis

The objective is consistent with Bureau policy and conforms with its responsibilities under a variety of laws.

Multiple Use Recommendation:

Accept the objective as written.

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Project Title	Wild Horse
Project Number	100-10000000

Activity Objectives

Wild Horse Management Framework Plan - Step 1
Activity Objectives

(Cultural Resources CR-1 1.0 contined)

Decision:

Accept the objective as written.

Reasons:

One comment was made asking what types of stabilization measures will be employed and on what significant cultural resource properties.

Stabilization measures are discussed under the rationale of this objective. The types of significant properties to be protected will be identified on a case-by-case basis, rather than for a blanket area or on a blanket type basis.

An additional comment asked what criteria for sensitivity will be used for limiting ORV activity. This also must be decided on a case-by-case or small area basis, since criteria such as site integrity, interpretive value, rareness or uniqueness, or a site's ability to yield data pertaining to prehistory or history, must be decided on inspection and based on skills and knowledge of the archaeologists making the decisions/recommendations.

Debate

about the objective of the debate

Proposals

The committee will make a study of the
of the situation and will be
assigned and on what objectives
and what objectives are discussed
under the rationale of the objectives.
The types of objectives proposed to
be presented will be identified as a
case-by-case basis, rather than for a
broad area or as a blanket type
basis.
In addition, the committee asked what
criteria for sensitivity will be used for
identifying the activity. This also may
be decided on a case-by-case or small
area basis, since criteria such as
also integrity, independence, etc.,
transparency or independence, or a site's
ability to give data pertaining to
credibility or history, may be decided
on a case-by-case basis and based on the
knowledge of the researcher's work
and the situation.

Step 1

Step 3

Recommendation 1.1:

Develop Cultural Resource Management Plans (CRMPs) for the Muddy Mountains, Willow Springs, and Brownstone Canyon by the end of FY85. Plans would include the installation of physical protective devices in conjunction with restriction of ORV use to existing roads, positive protection signing, and the establishment of interpretive trails.

Support Needs:

Materials for physical protective devices, trail construction, and interpretive signs.

Rationale:

Members of the Archaeological Research Center at University of Nevada-Las Vegas, have identified the Muddy Mountains, Brownstone Canyon, and Willow Springs as possessing high cultural values. Site types representative of the areas include rock shelters, roasting pits, rock art sites, and open sites. Preliminary patrol efforts through the areas indicate that vandalism in the form of uncontrolled ORV use and illegal excavation activities are of immediate concern. BLM Manual 8100 acknowledges the Bureau's responsibility for protection of cultural resources on public lands. The National Environmental Policy Act of 1969 and the Federal Land Management and Policy Act of 1976 also mandate protection of important archaeological, historical, and scientific values.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

Map Sheet
County
Range
Section
Township

Background:
History of the archaeological research
Center at University of Nevada-Las Vegas, which identified the Mohave
Mound, Fremont Mound, and
Willow Springs as possessing high
cultural values. These types
are indicative of the area (Indian
rock shelters, volcanic pits, rock art
sites, and open areas). Excavations
performed through the years
indicate that archeology in the form of
monumented ORV use and life.
excavation activities and of archaeological
resources. The Bureau's responsibility for
protection of cultural resources on
public lands. The National
Antiquities Act of 1906 and
the Federal Land Management and Policy
Act of 1976 also mandate protection of
significant archaeological, historical,
and scientific values.

Background:
The National Resource Management
Plan (NRM) for the Mohave Mound,
Willow Springs, and Greenhorn Canyon
by the end of 1981. Plans would
include the installation of physical
protective devices in conjunction with
restriction of ORV use as existing
roads, existing protection signs,
and the establishment of interpretive
trail.

Project Goals:
Develop a physical protective
devices, trail construction, and
interpretive signs.

The following actions are for multiple use analysis and recommendation.

Clark County

Cultural Resources

Recommendation 1.2:

Nominate the Wheeler Pass Charcoal Kilns to the National Register of Historic Places.

Support Needs:

National Register nomination, withdrawal.

Rationale:

Inclusion of this historic property in the National Register would provide further assurance that no action would be initiated that would threaten the historic quality of this important resource. This property is eligible for National Register nomination as defined under 36 CFR 800.10, as the property contains valuable research data which can greatly enhance our understanding and awareness associated with historic settlement of the Las Vegas area.

Multiple Use Analysis
(Includes Cultural Resources 1.3)

The nomination and evaluation process involved in listing sites on the National Register of Historic Places and for designation as National Historic Landmarks does not, in itself, conflict with other activities. Being designated would protect such sites from surface-disturbing activities which might endanger them. Conflicts could then be engendered with such activities as mineral leasing, competitive ORV events, and so on. The sites selected, however, are relatively small (or linear) and mitigation by avoidance would be relatively simple.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

If the sites named warrant the protection, based on the evaluation process, it ought to be granted.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept the recommendation as written.

Chief Deputy
Cultural Resources

Background:
The location of this historic property in
the National Register would provide
further assurance that no action would
be initiated that would threaten the
historic quality of this important
resource. This property is eligible
for National Register nomination as
defined under 36 CFR 60.105 as the
property contains valuable research
data which are generally unknown and
understanding and awareness associated
with historic settlement of the San
Joaquin area.

Historic Use Analysis
(Includes Cultural Resources 1.1)

The nomination and evaluation process involves in listing sites on the
National Register of Historic Places and for designation as National Historic
Landmarks. In fact, in listing, conflict with other activities. Being
designated would prevent such other activities which
might endanger them. Conflicts could arise as well as activities
as current listing, nomination, and so on. The sites selected,
however, are relatively small (or linear) and mitigation by avoidance would be
relatively simple.

Reason:
If the sites named warrant the
protection, based on the evaluation
process, it ought to be granted.

Alternative Considered:
None.

Historic Use Recommendation:
Accept the recommendation as written.

Report Number:
As shown in the 1.

BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)

Clark County

Activity

Cultural Resources

Overlay Reference

Step 1

Step 3

Recommendation 1.4:

Develop texts for and install interpretive signs for the Willow Springs Archaeological loop trail. In addition, develop an interpretive trail-head brochure keyed to the various interpretive stations placed at strategic points along the trail.

Support Needs:

Materials and cultural resource personnel.

Rationale:

Interpretation of cultural resources encompasses management, public, and professional needs. Interpretation complements protection by raising the public's awareness and concern for cultural resources. It is only through increased public awareness that we will fully achieve protection of our cultural resources and support for those programs which foster interpretation/protection. Hundreds of prehistoric sites on public lands could be interpreted for the public, not simply to "point out" these sites, but to increase public awareness and concern for these properties.

Related to the interpretation recommendation is the professional community research orientation and focus concerning cultural resources.

The BLM as a land managing agency is in a unique position to guide research on public lands in such a manner that problem-oriented research provides data useful to management, the public, and the scientific community.

Multiple Use Analysis

There are no conflicting recommendations to this suggestion. It is complemented by Recreation 1.6 relating to management of Red Rock Canyon Recreation Lands. This recommendation would have positive recreational values to persons using the Willow Springs area and could contribute to a "protection by education" effort for all cultural resource values.

Multiple Use Recommendation:

Accept the recommendation as written.

Rationale:

The recommendation is positive recreation and cultural resource management.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

UNITED STATES
 DEPARTMENT OF THE INTERIOR
 BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
 FOR THE WILSON SPRINGS AREA

The purpose of this plan is to provide a framework for the management of the Wilson Springs area. This plan is intended to guide the development and implementation of management actions that will protect and enhance the natural resources of the area. The plan is based on the following principles:

- 1. The natural resources of the area are of great value and should be protected.
- 2. Management actions should be based on sound scientific principles.
- 3. Management actions should be consistent with the overall goals of the Bureau of Land Management.
- 4. Management actions should be flexible and adaptable to changing circumstances.
- 5. Management actions should be based on the best available information.

The plan is organized into three main sections:

- 1. Introduction: This section provides an overview of the area and the purpose of the plan.
- 2. Management Framework: This section describes the principles and goals that will guide management actions.
- 3. Implementation: This section describes the specific actions that will be taken to implement the management framework.

The plan is intended to be a living document that will be updated as more information becomes available. It is the responsibility of the Bureau of Land Management to ensure that the plan is implemented effectively and that the natural resources of the area are protected.

The plan is based on the following assumptions:

- 1. The natural resources of the area are of great value and should be protected.
- 2. Management actions should be based on sound scientific principles.
- 3. Management actions should be consistent with the overall goals of the Bureau of Land Management.
- 4. Management actions should be flexible and adaptable to changing circumstances.
- 5. Management actions should be based on the best available information.

Wilson Springs Area

The Wilson Springs area is located in the southeastern corner of the state. It is a relatively small area, but it contains some of the most important natural resources in the state. The area is characterized by its unique geology, which has created a series of springs and pools that are of great value to the local community. The area is also home to a variety of rare and endangered plants and animals.

The plan is based on the following assumptions:

- 1. The natural resources of the area are of great value and should be protected.
- 2. Management actions should be based on sound scientific principles.
- 3. Management actions should be consistent with the overall goals of the Bureau of Land Management.
- 4. Management actions should be flexible and adaptable to changing circumstances.
- 5. Management actions should be based on the best available information.

The plan is intended to be a living document that will be updated as more information becomes available. It is the responsibility of the Bureau of Land Management to ensure that the plan is implemented effectively and that the natural resources of the area are protected.

The plan is based on the following assumptions:

- 1. The natural resources of the area are of great value and should be protected.
- 2. Management actions should be based on sound scientific principles.
- 3. Management actions should be consistent with the overall goals of the Bureau of Land Management.
- 4. Management actions should be flexible and adaptable to changing circumstances.
- 5. Management actions should be based on the best available information.

The plan is intended to be a living document that will be updated as more information becomes available. It is the responsibility of the Bureau of Land Management to ensure that the plan is implemented effectively and that the natural resources of the area are protected.

(Cultural Resources 1.4)

Decision:

Accept the recommendation as written.

Reasons:

In one comment it was remarked that installing an interpretive trail at Willow Springs would lead to further degradation and damage of the site complex. The rationale for Cultural Resources 1.4 sufficiently addresses the general philosophy behind this interpretive development. Additionally, Willow Springs makes a perfect area for interpretation by the public for several reasons: 1) the site is already in a degraded condition; 2) the opportunity presents itself to use a partially degraded site for this purpose, rather than risk a site with preserved artifactual and/or environmental integrity; 3) the RRCRL is the most intensively managed area of public land in southern Nevada. The constant presence of BLM personnel will help discourage vandalism, although interpretive signing will, indeed, draw public attention to the site complex.

Step 1

Step 3

Recommendation 1.5:

Preserve a representative sample of line shacks, mining cabins, and other isolated historical structures. Document and preserve isolated graves on public land.

Support Needs:

To be determined.

Rationale:

Some of these properties may have historical significance and none should be destroyed until fully assessed. Others are not particularly old or significant when considered individually, but collectively they relate to ranching and mining. Those two industries have dominated the history of Southern Nevada and it is important to preserve physical properties which relate to those lifeways.

National policy codified in the National Historic Preservation Act of 1966, the National Historic Preservation Act Amendments of 1980 (P.L. 96-515), and the National Environmental Policy Act of 1969, calls for preservation of historic sites including those of State and local significance. This recommendation implies inventory, since most of these kinds of sites have not yet been inventoried.

Multiple Use Analysis

Several activities, such as mineral entry, ORV use, and other surface disturbance activity could conflict with this recommendation. However, the isolation and uniqueness of such sites should make mitigation by avoidance relatively easy. A preservation program such as this would offer positive social and educational benefits to the people of Southern Nevada regarding their heritage.

Multiple Use Recommendation:

Accept the recommendation as written.

Reason:

This is a beneficial program having minimal conflicts with other resource uses.

Support Needs:

Inventory, stabilization, protection.

Alternative Considered:

None.

(Cultural Resources 1.5 continued)

Decision:

Accept the recommendation as written.

Reasons:

In one comment it was asked who would decide what is a representative sample of line shacks, mining cabins, and other historic structures, and how much is a representative sample. The representative sample is to be decided by the cultural resources specialist in the resource area. All efforts will be made to preserve as much of the segment of Nevada's past as possible, since there is no accurate accounting of how many of these types of sites exist within the resource area.

Particulars

Recent the investigation is written

Reasons:

In one country it was noted who would decide what is a representative sample of the whole, with the exception of the other country's agreement, and such is a representative sample. The representative sample is to be decided by the national representative organizations in the resource area. All efforts will be made to preserve as much of the resource of the area as possible, while there is an accurate accounting of the way of these things of area - while the resource area.

Step 1

Step 3

Recommendation 1.6:

Evaluate the following areas for designation as Areas of Critical Environmental Concern:

1. All high probability areas identified on URA Step #3 Overlays for each of the two planning units.
2. The Old Spanish Trail and environs.

Support Needs:

All other resources.

Rationale:

The Federal Land Policy and Management Act of 1976 (P.L. 94-579) defines Areas of Critical Environmental Concern and affords those areas special management consideration. Interim guidance further refines the definition and management implications. The relation of each of the two categories in this recommendation to relevance, importance, criticalness, and protectability is discussed in the URA. Basically, the categories are as follows:

1. High probability areas have highest potential for fragile archaeological resources and are also areas in which adverse impacts are most likely to occur.
2. The Old Spanish Trail and its environs are of regional and national importance, which clearly requires special management consideration.

Alternatives Considered:

Evaluate only some of the above described areas as ACECs. Nominate as ACECs areas with high potential (item 1 above) which are also in potential conflict with other uses (e.g., recreation areas, areas of intensive mining, oil and gas areas, areas classified for disposal, etc.).

See Forestry 2.1 for multiple use analysis and recommendation.

MANAGEMENT FRAMEWORK FOR
WYOMING-UTAH-ARIZONA-NEW MEXICO

State (1999)	Utah
County	Garfield
Section	36
Range	12N
Zone	12E

Recommendation 1.1
Evaluate the following areas for
designation as areas of critical
environmental concern:

1. All high potential areas
identified on the BLM's Overview
for each of the five planning units.

2. The 10 Special Tracts and enclaves.

Support Needs:
All other resources.

Recommendation 1.2
The Federal Land Policy and Management
Act of 1976 (PL 94-178) defines
Areas of Critical Environmental
Concern and allows those areas
special management consideration.
Further guidance further refines the
definition of management
consideration. The relation of each of
the two categories in this
recommendation is discussed in the
Appendix, Critical Areas, and
protection is discussed in the
BIA. Similarly, the categories are as
follows:

1. High potential areas are
highest potential for fragile
archaeological resources and are
also areas in which adverse
impacts are likely to occur.
2. The 10 Special Tracts and
enclaves are the critical and
national importance, which clearly
require special management
consideration.

Recommendation 1.3
Evaluate only some of the above
described areas as Areas of Critical
Environmental Concern (ACEC) areas with high potential (the
1 above) which are also in potential
conflict with other uses (e.g.,
recreation areas, areas of intensive
mining, oil and gas areas, areas
classified for disposal, etc.).

Step 1

Step 3

Recommendation 1.7:

Identify the following historical sites for special protection from fire:

Mt. Potosi Cabin
Wheeler Pass Charcoal Kilns
Searchlight Mining District
Virgin Mt. Cabin
Goodsprings Mining District
Mt. Potosi Mines
Trout Canyon Cabin
S. McCullough Wickiup
Crescent Peak Mining District

Support Needs:

Fire control decisions.

Rationale:

Those sites are of historical interest and warrant preservation. Each of these sites also includes flammable elements which are threatened by range fires.

National policy codified in the National Historic Preservation Act of 1969, the National Environmental Policy Act of 1969, and the Federal Land Policy and Management Act of 1976 calls for preservation of historic sites including those of State and local significance. In addition, some of these properties may qualify for the National Register of Historic Places. Under 36 CFR 800.3, neglect of a National Register property is an "adverse effect." Rejection of this recommendation, therefore, would require a lengthy review by the State Historic Preservation Officer and the Advisory Council for Historic Preservation.

See Fire 1.4 for multiple use analysis and recommendation.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

MANAGEMENT FRAMEWORK PLAN
RECOMMENDATION-ANALYSIS-DECISION

Name (MFP)
Clark County
Activity
Cultural Resources
Overlay Reference
Step 1
Step 3

Recommendation 1.8:

Initiate regular and systematic patrols of specific areas and/or sites containing high cultural resource values. Site types to be patrolled on a priority basis include rock art sites, shelter cave sites, and historic sites with architectural features, as identified on the URA Step 3 Cultural Resources Sites Overlay and in the BLM Archeological Site records.

Support Needs:

Development of an adequate cultural resource ranger program, budget, law enforcement authority.

Rationale:

The Clark County URA identifies numerous cultural sites which are continually suffering from various forms of vandalism. The BLM 8100 Manual states: "the Bureau shall protect by the most effective means under its authority" sites which have archeological or historical values. Cultural rangers and other trained personnel provide a means of on-the-ground supervision. A cultural ranger patrol program which emphasizes the continual photographic monitoring of cultural resource sites and other protective measures, can help meet this responsibility, as demonstrated by the California Desert Ranger Program.

Multiple Use Analysis

No other recommendations conflict with this recommendation. It would add a needed measure of protection to high value cultural resource sites. A principal constraint is the available manpower and funds to accomplish the task.

Multiple Use Recommendation:

Accept the recommendation as written with the provision that patrolling for cultural resource protection is to be accomplished in conjunction with other resource field work by DAT-trained personnel.

Reason:

While the intent is laudable it is unlikely additional cultural resource patrol personnel will be assigned.

Support Needs:

Coordination with all field personnel; site visitation schedule development.

Alternative Considered:

None.

Decision:

Accept the MFP II recommendation as written.

Reasons:

The only comment was a comment commending this measure.

Step 1

Step 3

Recommendation 1.9:

Develop and implement Cultural Resource Management Plans (CRMPs) on a site-specific basis as archeological or historical resources are discovered.

Support Needs:

To be determined as sites are discovered.

Rationale:

Information needed to adequately assess significance is presently lacking for most sites. Such an assessment is essential in deciding how to handle conflicts and in establishing priorities for preservation work. The problem is serious, since National Register eligibility determinations are required by 36 CFR 800.4 prior to any action which may affect cultural resources. For some sites, implementation of this recommendation will imply inventory to determine whether or not the site is unique or unusual in an area. For some historical sites further archive research will be required. Some archeological sites may need test excavation to establish whether or not buried deposits are present. Specific measures for specific sites and area will be designed under CRMPs.

See Livestock Grazing 1.4 for multiple use analysis and recommendation.

or historical resources and
significance.

Recommendation 1.4
Develop and implement a cultural
Resource Management Plan (RMP) for a
designated area of archaeological
or historical resources and
significance.

Recommendation 1.5
Develop and implement a cultural
Resource Management Plan (RMP) for a
designated area of archaeological
or historical resources and
significance.

Recommendation 1.6
Develop and implement a cultural
Resource Management Plan (RMP) for a
designated area of archaeological
or historical resources and
significance.

Recommendation 1.7
Develop and implement a cultural
Resource Management Plan (RMP) for a
designated area of archaeological
or historical resources and
significance.

Recommendation 1.8
Develop and implement a cultural
Resource Management Plan (RMP) for a
designated area of archaeological
or historical resources and
significance.

Recommendation 1.9
Develop and implement a cultural
Resource Management Plan (RMP) for a
designated area of archaeological
or historical resources and
significance.

Recommendation 1.10
Develop and implement a cultural
Resource Management Plan (RMP) for a
designated area of archaeological
or historical resources and
significance.

Step 1

Step 3

Recommendation 1.10:

Determine sources of deterioration and priorities for preservation through field evaluations of all cultural resource sites.

Support Needs:

Cultural resource personnel.

Rationale:

Many sites in our present inventory were recorded years ago by entities other than the BLM. Condition and trend information is lacking for most of those sites. Those data are badly needed for determining where problems occur and what further action is required. Implementation of this recommendation will consist of visiting the sites to identify erosion, trampling, vehicular use, vandalism, or other factors which are contributing to resource deterioration. This recommendation also implies further inventory, since only a fraction of the cultural resource sites in the Clark County area have been identified.

The Antiquities Act, NEPA, Executive Order 11593, and FLPMA clearly direct Federal agencies to conserve cultural resources. Moreover, many properties in Clark County may qualify for the National Register of Historic Places. Under Federal regulations (36 CFR 800), neglect of such properties, resulting in deterioration or destruction of the property, is an adverse effect. An adverse effect requires consultation with the State Historic Preservation Officer and the Advisory Council on Historic Preservation.

Multiple Use Analysis

No other recommendations conflict with this. Determination of such sources of deterioration are essential to an effective stabilization and protection program.

(Cultural Resources 1.10 continued)

Multiple Use Recommendation:

Accept recommendation as written.

Reason:

As stated in Multiple Use Analysis.

Support Needs:

As stated in MFP 1.

Alternative Considered:

None.

Decision:

Accept recommendation as written.

MANAGEMENT FRAMEWORK PLAN - STEP 1
ACTIVITY OBJECTIVES

Name (MFP)
Clark County
Activity
Cultural Resources
Objective Number
CR-2

Objective 2.0:

Preserve and protect important paleontological sites.

Rationale:

Paleontology is the study of life in past geologic periods and is based on fossil plant and animal impressions found in geologic strata today. This has a scientific value when comparing today's plants and animals with those of the past. Although no important paleontological sites have been discovered in Clark County, the potential for discovery is increasing with more construction and mineral exploration associated actions. When and if such discoveries are made, protective actions, suitable to the situation, should be instituted.

Multiple Use Analysis

This objective will provide management guidance as these resources are identified and brought into the multiple-use management scheme.

Multiple Use Recommendation:

Accept the objective as written.

Decision:

Change Watershed Objective 5.0 to Cultural Resources Objective 2.0 and accept as written.

Reason:

One commentator suggested moving the objective to the Cultural Resources section. This has been done because Paleontology Resources are covered by the Antiquities Act of 1906.
